MISSISSIPPI CODE OF 1972

As Amended

SEC. 27-105-303. Establishment of county depositories.

The amount of money belonging to the several funds in the county treasury of each county in the state which is required to meet the current needs and demands of no more than seven (7) business days shall be kept on deposit in qualified financial institutions whose accounts are insured by the Federal Deposit Insurance Corporation or the Federal Savings and Loan Insurance Corporation, or in some of them doing business in the several counties, provided that where there is no such financial institution in a county qualifying as a depository, some such financial institution in an adjoining county may qualify as a depository. All such deposits shall be subject to payment when demanded on warrant issued by the clerk of the board of supervisors on the order of the said board or on the allowance of a court authorized to allow the same. Each financial institution qualifying as such county depository shall not be required to pay interest to the county for the privilege of holding the deposits unless federal law permits the payment of interest on such deposits, in which case the maximum permitted interest rate shall be paid on such deposits. Where more than one (1) financial institution in a county offers to qualify as a depository, the board of supervisors may allocate such money to each qualified financial institution as nearly as practicable in proportion to their respective net worth, and may adopt the rules for receiving such deposits.

MISSISSIPPI CODE OF 1972

As Amended

SEC. 27-105-305. Publication for bids to keep county funds; content of bids; acceptance of bid.

The board of supervisors at the regular December meeting in each year, and annually thereafter, shall give notice to all financial institutions in its county whose accounts are insured by the Federal Deposit Insurance Corporation or the Federal Savings and Loan Insurance Corporation, by publication, that bids will be received from financial institutions at the following January meeting, or some subsequent meeting, for the privilege of keeping the county funds, or any part thereof, which notice shall refer by name to this article and it shall not be necessary to incorporate in said notice the provisions of this article; and at the January meeting, or a subsequent meeting as may be designated in the notice, as the case may be, the board of supervisors shall receive such bids or proposals as the financial institutions may make for the privilege of keeping the county funds, or any part thereof. The bids or proposals shall designate the kind of security as authorized by law, which the financial institutions propose to give as security for funds, and the board shall cause the county funds and all other funds in the hands of the county treasurer to be deposited in the qualified financial institution or qualified institutions proposing the best terms and meeting the requirements provided in Section 27-105-315, having in view the safety of such funds. The terms made with each depository shall remain in force for the current year and until new arrangements shall be made according to this article.

SOURCES: Codes, Hemingway's 1917, Sec. 4235; 1930, Sec. 4341; 1942, Sec. 9145; Laws, 1914, ch. 257; 1926, ch. 248; 1985, ch. 514, Sec. 9; 1988, ch. 473, Sec. 7, eff from and after December 1, 1988.

1997 Amendment:

SECTION 1. Section 27-105-305, Mississippi Code of 1972, is amended as follows:

27-105-305. The board of supervisors at the regular December 1997 meeting * * *, and annually thereafter or, in the discretion of the board of supervisors, every two (2) years thereafter, shall give notice to all financial institutions in its county whose accounts are insured by the Federal Deposit Insurance Corporation or the Federal Savings and Loan Insurance Corporation (or any successor thereto), by publication, that bids will be received from financial institutions at the following January meeting, or some subsequent meeting, for the privilege of keeping the county funds, or any part thereof, which notice shall refer by name to this article and it shall not be necessary to incorporate in the notice the provisions of this article; and at the January meeting, or a subsequent meeting as may be designated in the notice, as the case may be, the board of supervisors shall receive such bids or proposals as the financial institutions may make for the privilege of keeping the county funds, or any part thereof. The bids or proposals shall designate the kind of security as authorized by law which the financial institutions propose to give as security for funds, and the board shall cause the county funds and all other funds in the hands of the county treasurer to be deposited in the qualified financial institution or qualified institutions proposing the best terms and meeting the requirements provided in Section 27-105-315, having in view the safety of such funds. The terms made with each depository shall remain in force for the current year and until new arrangements shall be made according to this article.

MISSISSIPPI CODE OF 1972

As Amended

SEC. 27-105-309. When banks in county fail to respond.

Any county failing to secure a county depository by the advertisement to the qualified financial institutions of the county and of the adjoining counties, shall readvertise at any subsequent meeting of the board of supervisors, and as soon as possible, for bids for a county depository. Such notice shall be published once a week for three (3) weeks in some newspaper published in the county, and in a daily newspaper in Jackson, Mississippi, and shall state that the proposal is open to any qualified financial institution in the state, and that financial institutions outside of the county shall have preference over county financial institutions.

MISSISSIPPI CODE OF 1972

As Amended

SEC. 27-105-315. Qualification as depository.

(1) Any financial institution in a county, or in an adjoining county where there is no financial institution in the county qualifying, whose accounts are insured by the Federal Deposit Insurance Corporation or any successors to that insurance corporation may qualify as a county depository, if the institution qualifies as a public funds depository under Section 27-105-5 or a public funds guaranty pool member under Sections 27-105-5 and 27-105-6. The qualified financial institution shall secure those deposits by placing qualified securities on deposit with the State Treasurer as provided in Section 27-105-5.

(2) Notwithstanding the foregoing, any financial institution not meeting the prescribed ratio requirement whose accounts are insured by the Federal Deposit Insurance Corporation * * * or any successors to that insurance corporation, may receive county funds in an amount not exceeding the amount that is insured by that insurance corporation and may qualify as a county depository to the extent of that insurance.

MISSISSIPPI CODE OF 1972

As Amended

SEC. 27-105-323. Detailed reports made to supervisors of receipts and disbursements by depositories.

In any county where a county depository or depositories shall qualify as herein provided, every such depository, at the regular January, April, July and October meetings of the board of supervisors, and at such other times as may be required by the board, shall make to the board of supervisors a detailed report of all moneys received by it and of the disbursements thereof, so that said receipts and disbursements shall clearly and distinctly appear; and each depository shall exhibit with its reports the vouchers for the disbursements charged therein, and all such vouchers paid by the county depository shall be marked cancelled by the clerk and shall be filed and preserved by the clerk subject to examination by the state auditing department. Such depository shall also, at the time of making such reports, present a certified statement of the amount then on deposit in the depository, and shall, upon demand of the board of supervisors, bring all moneys belonging to the county to the board of supervisors to be counted; and, if any county depository shall neglect or refuse to make such reports, it shall forfeit the sum of two hundred and fifty dollars to be recovered by suit in the name of the county for its use.

MISSISSIPPI CODE OF 1972

As Amended

SEC. 27-105-329. Failure to pay county warrants.

In the event of the failure of any county depository to pay any county warrant lawfully issued on any funds on deposit belonging to the county in the depository, the county is * * * empowered to order the State Treasurer to sell such securities as are placed with the State Treasurer by the depository, or call on the public funds guaranty pool if the depository is a member, or so much of them as may be necessary to cover back into the county treasury the amount of county funds on deposit with the depository, with accrued interest thereon, as provided in Section 27-105-25. In the event of the failure of the county depository to pay any warrant when the depository has placed as security surety bonds, the clerk or holder of the warrant shall notify the president of the board of supervisors and he shall take such immediate action as he may deem best and most expedient for covering back into the Treasury all county money on deposit in the depository, and the board of supervisors is authorized to employ counsel, if necessary, to more speedily enforce the payment. The expenses of the collection, including the counsel fee, shall be charged against the depository, and, in addition thereto, the depository shall be liable for damages at the rate of one percent (1%) per month for any delay in paying over any county funds when lawfully demanded, and the bond of any depository shall be liable for those expenses and damages.

MISSISSIPPI CODE OF 1972

As Amended

SEC. 27-105-331. Acquisition of closed depository securities.

The State Treasurer, on behalf of any county in the State of Mississippi that has acquired bonds or other securities as the result of the closing of the depository or depositories of the county, is authorized and empowered in his discretion to sell, trade, refinance or agree to the refinancing of any or all of those bonds now held or owned by it and by any subdivision or taxing district of the county. The State Treasurer is further authorized and empowered, in his discretion, in refinancing any of those bonds, to agree to a reduction of the principal sum and likewise to agree to a reduction of the interest rate thereon. The State Treasurer is authorized and empowered, in his discretion, to sell any of those bonds at or for the best price obtainable, or to trade those bonds for other bonds, when in the judgment of the State Treasurer the best interests of the county would be advanced thereby, and he is further authorized to handle and negotiate any matured interest coupons on any of those bonds in the same manner as he is authorized in this section to deal with the bonds.

All of the proceeds of the sale, refinancing, trading, or collection of any of those bonds shall be accounted for by the State Treasurer and placed to the credit of the subdivisions or funds of the counties entitled to those proceeds.

SOURCES: Codes, 1942, Sec. 9158; Laws, 1936, ch. 302. Amended by Laws 2000, Ch. 408, Sec. 10, SB3064, eff. July 1, 2001.

MISSISSIPPI CODE OF 1972

As Amended

SEC. 27-105-333. Alternative method of selecting depositories.

In any county in this state where no depository or depositories were selected and qualified, as provided by law, on or before the first Monday of January 1932, or in which the depository or depositories are not selected and qualified annually thereafter on or before the first Monday in January, the board of supervisors of the county shall, at the January meeting of the board or any regular meeting or special meeting thereafter called for that purpose, select and designate a depository or depositories into which the tax collector or tax collectors of the county shall deposit all tax collections and other public funds collected after the first Monday in January 1932, when collected, and in which the same shall thereafter be distributed, at the time and in the manner as now required by law, to the several funds or accounts in which the same properly belong, as provided by law herein.

Any depository so selected by the board of supervisors shall be within the State of Mississippi and may hold the deposits at such rate of interest as may be agreed upon with the board of supervisors or, in the discretion of the board of supervisors, without liability for interest unless it is required to be paid under the provisions of Section 27-105-303, but the * * * depository shall secure the * * * deposits by pledging with the State Treasurer such securities in such amounts and upon such conditions as are now required by law of depositories that qualify as such by bidding for them.

As Amended

SEC. 27-105-337. Tax collector to deposit funds.

Upon the selection of any county depository, either upon bids therefor or by designation of the board of supervisors or the Commissioner of Banking and Consumer Finance, and such designated financial institution becoming qualified as required by law, the tax collector of such county or counties shall deposit all funds collected therein and thereafter make a transfer to the several accounts and funds as now required by law of him in making his settlements. Upon so depositing such funds when collected, the tax collector shall thereupon be relieved and discharged from further liability therefor excepting for such amounts as the tax collector may withdraw or cause to be withdrawn from his account or accounts and to which he is not legally entitled.

MISSISSIPPI CODE OF 1972

As Amended

SEC. 27-105-343. Chancery clerks to perform duties of county treasurers.

From and after the passage of this section, all the duties except the duty of receiving and disbursing money that were imposed by law on county treasurers shall be required to be done by chancery clerks, and they shall be the custodians of all the books, records, papers, and vouchers heretofore belonging to county treasurers, and shall be custodians of all the promissory notes, bonds, and other like property belonging to or deposited with the county, and said clerks shall in all respects be liable on their official bonds for the proper care of the same.

The duty of receipting for and disbursing all monies heretofore deposited with county treasurers shall be done and performed by the designated county and drainage district depositories appointed in the manner provided by law; and any person or corporation required to pay money into a county treasury shall hereafter pay the same to a properly designated depository and such depository shall issue receipts therefor in duplicate, one of which shall be filed with the chancery clerk and the other retained by the person or corporation making such payment, and such payment when made to a designated depository shall discharge the person or corporation making such payment from any further liability therefor.

In the event there shall be no designated depository for any money required to be paid into a county treasury, such payment shall be made to the tax collector who shall receipt for same in duplicate as required in the preceding paragraph and shall pay the same over to a legally appointed depository within ten (10) days after one is qualified to receive the same. The tax collector shall be the custodian of all money belonging to a county or any subdivision thereof until there be appointed a depository for any such funds and the said tax collectors shall be liable on their official bond for the proper accounting and payment of any funds so paid to them.

Boards of supervisors shall allow chancery clerks for their compensation for performance of the duties required of them by this section the sum of Two Thousand Five Hundred Dollars ($2,500.00) per annum.

Nothing in this section shall preclude drainage districts from selecting their treasurer or depository as now provided by law.

SEC. 27-105-361. Banks failing to qualify, treasurer to be selected or depository designated.

In the event of failure on the part of any bank in such municipality to qualify as a depository, the board of mayor and aldermen or other like governing authority of such city, town or village, hereinafter called the governing authority, may select a treasurer who shall safely keep and disburse the funds of such town, city or village according to law, and make bond for that purpose as now provided by law for such treasurers. The governing authority at any regular or special meeting may select and designate a depository or depositories into which the tax collector or collectors and auditor or auditors of said city, town or village shall deposit all tax collections and public funds, when collected and/or received, and in which the same shall thereafter be distributed, at the time or in the manner, as required by law to the several funds or accounts as now provided by law. Any depository so selected by the governing authority shall be within the State of Mississippi, and may hold such deposit or deposits at such rate of interest as may be agreed upon by the governing authority or in the discretion of the governing authority without liability for interest; but such depositories shall secure the same by pledging with the governing authority such security, in such amounts and upon such conditions as is now required by law of depositories which qualify as such by bidding therefor.

MISSISSIPPI CODE OF 1972

As Amended

SEC. 27-105-365. Depository for county and municipal hospital funds; investments.

(1) The commissioners or board of trustees of any hospital owned and operated separately or jointly by one or more counties, cities, towns, supervisors districts, or election districts or combinations thereof, including hospitals established under the authority of Sections 41-13-1 through 41-13-9, as now or hereafter amended, are hereby authorized and empowered to deposit the funds of such hospital in one or more financial institutions whose accounts are insured by the Federal Deposit Insurance Corporation, selected by the board of trustees in the same manner as county depositories are selected by boards of supervisors pursuant to Section 27-105-305, located in its county or counties, except as otherwise provided in the following paragraphs.

At the regular December meeting of the board of trustees in 1995, or at any regular December meeting of the board thereafter, the board may, in its discretion, give notice by publication to all financial institutions in its county or counties whose accounts are insured by the Federal Deposit Insurance Corporation, that bids will be received from financial institutions at the following January meeting, or some subsequent meeting, for the privilege of keeping the hospital funds or any part thereof for a period of three (3) years, subject to earlier termination as authorized in this subsection. Such bids shall be submitted and accepted in the same manner as provided in Section 27-105-305. After the board has selected a depository or depositories as provided in this subsection, the board may, at any regular December meeting during the three-year period, give notice to and receive bids from financial institutions in the manner provided in this subsection, for the privilege of keeping the hospital funds or any part thereof for a period of three (3) years, subject to earlier termination as authorized in this subsection; and after receiving such bids, the board may reject all bids and elect to keep the funds in the current depository or depositories for the remainder of the three-year period under the terms originally agreed to with the depository or depositories, or if the board determines it to be in the best interests of the hospital, it may terminate the agreement with the current depository or depositories and select a new depository or depositories or the same depository or depositories from the bids received, choosing the bid or bids proposing the best terms for the hospital.

Such hospital funds, when so deposited, shall have the same security and protection as required for county funds in Section 27-105-315. When more than one (1) depository of whatever type is authorized, the commissioners or board of trustees may select one or more of such depositories and may apportion such deposits, at their or its discretion, if more than one (1) depository is selected. If there is no financial institution located within such county or counties, the commissioners or board of trustees of such hospital may select, in their or its discretion, a depository located outside of such county or counties.

The commissioners or boards of trustees of such community hospitals shall deposit the funds of such hospital into the depository selected under this section on the day when they are received or collected, or on the next business day thereafter.

(2) The commissioners or board of trustees of any such hospital may, in their or its discretion, maintain one or more special funds for the purpose of making necessary repairs, necessary purchases of equipment, meeting operational and maintenance expenses, allowing for depreciation, providing contingent funds for emergencies, funding hospital improvements, or providing for other special needs, and may deposit any part of such special fund in accordance with the provisions contained in subsection (1) for the deposit of other funds of such hospital. Said commissioners or board of trustees may also

invest any part of such special fund, any funds derived from the sale of bonds, or any other funds in excess of the sums which will be required to meet the current needs and demands of no more than seven (7) business days in the following:

(a) In any bonds or other direct obligations of the United States of America or the State of Mississippi, or of any county, school district or municipality of this state, which such county, school district or municipal bonds have been approved by a reputable bond attorney or have been validated by decree of the chancery court;

(b) In obligations issued or guaranteed in full as to principal and interest by the United States of America which are subject to a repurchase agreement with a financial institution certified as a qualified depository;

(c) In United States government agency, United States government instrumentality, or United States government sponsored enterprise obligations, the principal and interest of which are fully guaranteed by the government of the United States, such as the Government National Mortgage Association; or United States government agency, United States government instrumentality, or United States government sponsored enterprise obligations, the principal and interest of which are guaranteed by any United States government agency, United States government instrumentality, or United States government sponsored enterprise. However, at no time shall the funds invested in United States government agency, United States government instrumentality, or United States government sponsored enterprise obligations enumerated in the preceding sentence exceed fifty percent (50%) of all monies invested with maturities of thirty (30) days or longer. The limitation set forth in the preceding sentence shall be applicable only at the time of purchase and shall not require the liquidation of any investment at any time;

(d) In an account or accounts in one or more financial institutions located in this state, and such funds when so invested shall have the same security and protection as required in Section 27-105-315;

(e) In an insured account or accounts in one or more financial institutions in this state whose accounts are insured by the Federal Deposit Insurance Corporation; provided that the amount in any single account shall not exceed the amount which at any one time is insured by the Federal Deposit Insurance Corporation;

(f) In any open-end or closed-end management type investment company or investment trust registered under the provisions of 15 USCS Section 80(a)-1 et seq., provided that the portfolio of such investment company or investment trust is limited to direct obligations issued by the United States of America, United States government agencies, United States government instrumentalities or United States government sponsored enterprises, and to repurchase agreements fully collateralized by direct obligations of the United States of America, United States government agencies, United States government instrumentalities or United States government sponsored enterprises, and the investment company or investment trust takes delivery of such collateral for the repurchase agreement, either directly or through an authorized custodian. The total dollar amount of funds invested in all open-end and closed-end management type investment companies and investment trusts at any one time shall not exceed twenty percent (20%) of the total dollar amount of funds invested under this subsection. The limitation set forth in the preceding sentence shall be applicable only at the time of purchase and shall not require the liquidation of any investment at any time;

(g) In a trust fund consisting of pooled or commingled funds of other hospitals, provided that:

(i) The portfolio of such trust fund may include investments in commercial paper and bankers

acceptances or other short-term obligations issued by banks having one (1) of the two (2) highest *short-term* rating categories of either Standard & Poor's Corporation or Moody's Investors Service, or corporate notes and bonds having one (1) of the three (3) highest long-term rating categories of either Standard & Poor's Corporation or Moody's Investors Service, or in any open-ended or closed-ended management-type investment company or investment trust registered under the provisions or 15 USCS Section 80(a)-1 et seq., that would contain the aforementioned securities;

(ii) The portfolio of such trust fund is otherwise limited to investments authorized under this section; provided, however, that such investments shall not be subject to the percentage limitations set forth in subsection (2)(c) or subsection (2)(f) of this section;

(iii) Such trust is managed by an entity with trust powers or by an investment adviser registered with the Securities and Exchange Commission and retained as an investment manager by the commissioners or the board of trustees, as the case may be; and

(iv) Any investment manager approved by the commissioners or the board of trustees, as the case may be, shall invest such commingled funds as a fiduciary.

In addition, the commissioners or the board of trustees, in their or its discretion, may invest such funds as permitted by Section 19-9-29, 21-33-323, 27-105-33 or 37-59-43, as the same may be amended from time to time.

In any event, the bonds or obligations described in paragraph (a), (b) or (c) of this subsection (2) in which such funds are invested shall mature or be redeemable prior to the time the funds so invested will be needed for expenditures. When bonds or other obligations have been so purchased, the same may be sold or surrendered for redemption at any time by order or resolution of the commissioners or board of trustees of any such hospital, and the president or vice president, when authorized by such order or resolution, shall have the power and authority to execute all instruments and take such other action as may be necessary to effectuate the sale or redemption thereof.

When any such special fund is maintained for a purpose that requires contract letting or other action by the governing authority or authorities of the counties, cities, towns, supervisors districts or election districts, separately or jointly owning and operating such hospital, the commissioners or board of trustees of the hospital may transfer the whole or any part of any such special fund to the governing authority or authorities aforesaid on condition that the same be used for such purpose or returned to the transferring commissioners or board of trustees within the time designated in the conditions.

(3) All funds which shall be derived from any tax levied for the support and maintenance of any such hospital, and all other funds which may be made available for the support and maintenance of any such hospital by the state or any county or municipality, and all fees and other monies which may be collected or received by or for such hospital shall be placed in a special fund to the credit of such hospital within sixty (60) days after collection, and all such funds shall be expended and paid out upon the allowance of the board of trustees or commissioners of the hospital, as the case may be, and disbursed by checks signed by such person, officer or officers, as may be designated by such board of trustees or commissioners. Any officer or person who shall be designated by such board of trustees or commissioners to execute such checks shall furnish to such board of trustees or commissioners a good and sufficient surety bond in such amount as such board of trustees may fix, conditioned upon the faithful discharge of his duties, and the premium on such bond shall be paid from the funds available for the support and maintenance of such hospital. No funds shall be disbursed by any such hospital until the board of trustees or the commissioners thereof shall have adopted an annual budget and submitted same to the respective governing authority or authorities of the counties, cities, towns, supervisors districts, or

election districts, separately or jointly owning and operating such hospital, and until such budget shall have been approved by the governing authority or authorities, as the case may be, which approval shall be evidenced by a proper order recorded upon the minutes of each such authority. The accounts and records of any such hospital shall be audited by the State Department of Audit at the same time and in the same manner as the accounts and financial records of the county are audited, and for such purpose shall be considered in all respects as county accounts and records; however, this provision with regard to such audits shall be applicable only to hospitals owned wholly or in part by a county.

(4) The provisions of this section shall not apply to hospitals owned jointly by a city and county and operated by lease agreement or contract with a nonprofit hospital corporation.

MISSISSIPPI CODE OF 1972

As Amended

SEC. 27-105-367. Surplus funds; transfer to other funds; procedures; petition and election as to certain transfers; retirement of bonds and interest.

(1) The board of supervisors and municipal governing authorities, by order spread on their minutes, may transfer any balance remaining in a special fund in the treasury of the county or municipality, as the case may be, to the general fund to be used for general purposes for the succeeding fiscal year if the purpose for which the special fund was created has been fully carried out. Taxes imposed for the succeeding fiscal year for county or municipal general purposes shall be reduced by the amount of such balance transferred from the special fund to the general fund.

(2)

(a) When there is any surplus monies less than Two Thousand Five Hundred Dollars ($2,500.00) in any special fund in the treasury of any county, road district, school district or other taxing district, or any municipality, and the board of supervisors, acting for the county or any road district, school district or other taxing district thereof, or the governing authorities of the municipality, as the case may be, shall desire to transfer all or part of the surplus monies in the special fund to some other fund of said county, road district, school district or other taxing district, or said municipality, as the case may be, such board of supervisors or the governing authorities of the municipality, as the case may be, shall cause an order to be entered on their minutes declaring their intention so to do, which said order shall show the name of the special fund, the amount of surplus monies to be transferred, and the name of the fund to which it is to be transferred, and same shall be transferred accordingly.

(b) Whenever the surplus monies in any special fund shall be Two Thousand Five Hundred Dollars ($2,500.00) or more, the board of supervisors or the governing authorities of the municipality, as the case may be, desiring to transfer such surplus monies, shall cause notice of same to be published in some newspaper published in the county, district or municipality, as the case may be, for three (3) consecutive weeks or, if there be no newspaper so published, then in some newspaper having a general circulation in the county, district or municipality. Thereafter, the monies shall be transferred as stated in the order not less than thirty (30) days after the first publication in a newspaper as above stated, unless within said thirty (30) days, a petition against the proposed transfer, signed by twenty percent (20%) or fifteen hundred (1500), whichever is less, of the qualified electors residing in the county, district or municipality, as the case may be, shall be filed with the governing body. In the event such petition is filed, an election on the question of such transfer shall be called and held as herein provided. Notice of the election and manner of conducting it shall be the same as other elections conducted within counties or municipalities, as the case may be. The ballot shall have printed thereon the amount of surplus monies sought to be transferred, the purpose for which such monies were authorized to be used and a statement that a surplus exists in such fund, and the purpose for which such monies are sought to be used pursuant to their transfer. If a majority of the qualified electors voting in the election vote in favor of the transfer of surplus monies, then such monies shall be transferred. If a majority of the qualified electors voting in the election do not vote in favor of such transfer of surplus monies, then such monies shall not be transferred. Provided, however, that if the question of transferring the balance remaining in a special fund, the purpose for which such fund was created having been fully carried out, fails at an election held on same, then such monies shall be invested as authorized by law and shall be calculated in the budget for the county or municipality, as the case may be, to be used for general purposes for the succeeding fiscal year. Taxes imposed for the succeeding fiscal year for county or municipal general purposes shall be reduced by the amount of such monies in such special fund.

(3)

(a) When the balance remaining in any fund as set forth in subsections (1) and (2) represents a part of the proceeds of bonds sold for such county, district or municipality, and any part of said bonds or interest thereon remains unpaid, then such balance shall be transferred to the bond and interest fund to retire said bonds and interest due thereon, regardless of the amount thereof, without the necessity of publishing the order transferring same.

(b) Surplus monies in a bond and interest fund shall not be transferred unless there remains to the credit of such fund a sufficient balance to fully retire such bonds and interest thereon, including all redeemable bond coupons and the tax levy required to be made to pay principal of and interest on such bonds as they become due has been discontinued by the governing authorities of the county or municipality, as the case may be. Surplus monies in a bond and interest fund may be transferred to the general fund in accordance with subsection (1) of this section or to other funds in accordance with subsection (2) (b) of this section, regardless of the amount of the balance to be transferred.

MISSISSIPPI CODE OF 1972

As Amended

SEC. 27-105-371. Duty to deposit funds into county depository; disposition of unidentifiable funds; duty of chancery clerk.

All county officials who receive funds under the authority of their office shall deposit such funds into a county depository. Any unidentifiable funds found by the county auditor or the State Auditor in the county depository shall be settled into the general fund of the county within thirty (30) days of the determination.

Any funds settled into the general fund under the authority of this section which are later identified shall be properly disbursed by the chancery clerk after the approval of the board of supervisors.

CITY OF HATTIESBURG

DESIGNATION OF MUNICIPAL DEPOSITORIES

INFORMATION SHEET

2019-2020

Municipal Depositories must be certified by the State Treasurer as meeting the Capital Ratio requirement specified in Code section 27-105-315, or they must be insured by the Federal Deposit Insurance Corporation (FDIC) or Federal Savings and Loan Insurance Corporation (FSLIC).

Financial institutions of the City of Hattiesburg insured by the FDIC or FSLIC may qualify if such institution had a primary Capital-to-Assets ratio of 5 %or more determined not later than December 1^{51} of each calendar year by State Treasurer on the basis of balance sheet of applying depositories at June 30^{th} of the same calendar year. Each depository applicant must furnish to the State Treasure such financial statements, balance sheets and other documentation sworn to by a duly elected officer(s) on such date or dates and on such forms as the State Treasure may require. Willful misstatement of fact on such forms shall subject the officer and the financial institution to ineligibility to serve as a depository for a period of one (1) year commencing with the date on which the State Treasurer certifies that such a misstatement has been made.

Securities eligible for securing of municipal funds as provided in Section 27-105-5, in an amount at least equal to 105% of the maximum sum to be placed in such financial institution at any one time exclusively that portion of the amounts insured by FDIC or FSLIC must be deposited with the Office of the City Clerk of his/her designee. No bond shall be accepted as security except for its market value, the city retains the right to retain other and different security. Failure to comply shall cause the depository to forfeit its rights as a depository, and all City funds will be immediately removed.

In addition to the foregoing, all applicants are required to comply with the following State statutes contained in Chapter 105, Article, Volume 9, and more specifically Sections 27-105-301 through 27-105-371, Mississippi Code of 1972, as annotated and amended, copies of which are attached hereto for your information.

BY: Kermas Eaton

CITY CLERK

NOTICE TO BIDDERS

PURSUANT to the provisions of Chapter 105, Article 3, Volume 9, and more specifically, Section 27-105-301 through 27-105-371, Mississippi Code of 1972, as Annotated and Amended, NOTICE IS HEREBY GIVEN TO ALL FINANCIAL INSTITUTIONS, INSURED AS REQUIRED BY STATE STATUTE, in the City of Hattiesburg, Mississippi, that the Mayor and Council of the City of Hattiesburg, Mississippi, will receive sealed bids until 10:00 A.M., December 13, 2018 in the City Clerk's Office in City Hall, P.O. Box 1898, Hattiesburg, Mississippi, 39403, and will be opened and considered for the privilege of keeping funds of said City of Hattiesburg, or any part thereof, for a period of two (2) years, such bids to be submitted as provided by law and particularly as provided by Chapter 105, Article 3, Volume 9, of the Mississippi Code of 1972, as Annotated and Amended.

Each BID must be received in a sealed envelope which is marked in the lower left hand Corner EXACTLY as follows:

BID:

TWO (2) YEAR DEPOSITORIES
OPENING 10:00 A.M. DECEMBER 13, 2018

Each BID should also specify the kind(s) of securities to be given as security for funds Pursuant to State Statute.

Published by Order of the Council on this the 20th day of November 2018.

NOTICE TO BIDDERS

NOTICE is hereby given that the Mayor and Council of the City of Hattiesburg, Mississippi will receive bids in the following manner:

Proposals will be accepted until 10:00a.m. On Thursday, December 20, 2018, by electronic bid submission or in sealed envelopes at the Office of the City Clerk, 200 Forrest Street, Hattiesburg, MS 39401.Vendors must supply prices with their proposal. A bid form is provided. The bid form should be filled out and uploaded by the date and time stated above.

Specifications and procedures can be downloaded from Central Bidding at www.centralbidding.com All bids must comply with the specifications provided. The City of Hattiesburg reserves the right to amend the specifications, as necessary.

Submissions will be evaluated and vendors submitting acceptable offers will be invited to submit priced bids via reverse auction. Electronic bids and/or reverse auction bids can be submitted at www.centralbidding.com. For any questions relating to the electronic process, please call Central Bidding at (225)810-4814.

Qualified bidders will be invited to participate in a reverse auction, which will take place on January 10, 2020, at 10:30a.m. **(80) Supervisory Control and Data Acquisition Units *SCADA Units* .**

The above shall bid upon and delivered as per detailed specifications on file in the Office of the City Clerk, P. O. Box 1898, 200 Forrest Street, Hattiesburg, Mississippi, 39403-1898, (601) 545-4552, which may be obtained upon request.

Each BID must be received in a sealed envelope which is marked in the lower left-hand corner with the word "BID" and the NAME OF ITEM on which bid is being made and the DATE OF BID OPENING.

The lowest and best bid received will be accepted, subject to the provisions of Section 31-7-13 of the Mississippi Code of 1972, Annotated as Amended, and other applicable State law; but the Council reserves the right to reject any or all bids received and to waive informalities.

PUBLISHED by Order of the Council on this, the 20th day of November, 2018.

Sewer Lift Station Monitoring

Supervisory control and data acquisition unit specifications

Total of 80 SCADA Units

1. Communications with cellular network
2. 24/7 Monitoring
3. Predefined monitoring points with continuous monitoring
    a. Pump run times
    b. High wet well level
    c. Loss of power detection
4. 24/7 delivery alarms via text, email, or phone
    a. High wet well level for extended time
    b. Power loss for extended time
    c. Escalation for un-cleared alarm
5. Business hours delivery warnings
    a. Excessive pump cycling
    b. Pump run times out of balance
    c. Pump cycles out of balance
    d. Pump short cycling
    e. Inspection overdue
6. Can remotely access date from laptop, desktop, or smart phone, or tablet (operating system independent – windows, MAC os, Android, and IOS compatibility required
7. Service technician button
8. Over-the-air software updates and spare parts catalog
9. Customized views, workflow, and reports
10. Built-In Expansion Capability
11. Plug-In Technology Upgrades
12. Easy Installation
13. All Installation Hardware Included for external installation up to 6' from pump controller. Should include all environmentally rated cables, connectors, ceiling glands, non-corrosive mounting hardware, and fasteners
14. Warranty Period 2 year minimum
15. High Voltage Inputs 120 volt VAC nominal greater than 3000 volt isolation
16. Monitor of to 6 pumps runtime and cycles at each location
17. Proof of Inspection and inspection reminders
18. Record of Response
19. 16+ Hour Battery Backup
20. 3G Cellular Data
21. 3G Cellular data
22. Status Indicators/Test Buttons
23. SMS Alerts – Email Reports
24. Supports Simple Text and Smart Devices
25. Open design hardware and software documentation provided for future in house or 3rd party repair, replacement or enhancement. No proprietary vendor lock in permitted.
26. Environmental
    a. NEMA 4X enclosure
    b. 0-100% Humidity Condensing or Non-condensing
    c. -4 to 122 F (-20 to 50 C) External Ambient Temperature
    d. Controlled air venting

27. System health monitoring – automatic notification that a remote unit is not performing its function (battery low, power loss, extended communication failure.....)

SPECIAL UTILITY NOTES:

1. ALL UTILITIES THAT LOCATED DURING THE FIELD DATA COLLECTION ARE SHOWN ON THESE PLANS. ALL CONFLICTS WITH EXISTING UTILITIES ENCOUNTERED DURING CONSTRUCTION SHALL BE COORDINATED WITH THE UTILITY OWNER, THE ENGINEER AND THE PROJECT OWNER PRIOR TO INSTALLATION OF THE PROPOSED WATER SYSTEM. (NO SEPARATE PAY FOR COORDINATION)
2. THE CONTRACTOR SHALL DOCUMENT THE EXISTENCE OF ANY MISSING AND/OR OVERLAPPING UNDERGROUND UTILITIES AND STORM DRAINAGE NOT SHOWN ON THESE CONSTRUCTION DRAWINGS.

GENERAL NOTES:

1. THE CONTRACTOR SHALL HAVE A COMPETENT AND EXPERIENCED SUPERINTENDENT ON THE PROJECT SITE AT ALL TIMES. THE SUPERINTENDENT SHALL NOT OPERATE EQUIPMENT WHILE ON THE PROJECT SITE. WORK ON THE PROJECT SHALL STOP IF THE ASSIGNED PROJECT SUPERINTENDENT IS NOT ON SITE.
2. ALL WORK SHALL BE PERFORMED IN ACCORDANCE WITH ALL LOCAL, STATE AND FEDERAL CODES.
3. THE PROJECT SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE "MISSISSIPPI STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION, 2004 EDITION" (OR LATEST), EXCEPT AS NOTED OTHERWISE ON THESE PLANS AND/OR THE SPECIFICATIONS.
4. DEVIATIONS FROM THESE PLANS AND NOTES WITHOUT PRIOR WRITTEN CONSENT OF THE OWNER, HIS REPRESENTATIVE OR THE ENGINEER/ARCHITECT MAY CAUSE THE WORK TO BE UNACCEPTABLE.
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL CONSTRUCTION STAKING AND THE LOCATION OF THE PROJECT. CONTROL COORDINATE SYSTEM AVAILABLE THROUGH THE ARCHITECT.
6. THE CONTRACTOR SHALL VERIFY AND/OR REESTABLISH ALL CENTERLINES AS DEFINED ON THESE PLANS AND SPECIFICATIONS.
7. CONTRACTOR SHALL BE RESPONSIBLE FOR ALL MATERIAL TESTING BY AN INDEPENDENT LABORATORY APPROVED BY THE ENGINEER/ARCHITECT.
8. CONTRACTOR SHALL BEAR FULL RESPONSIBILITY FOR FINISHING THE CONSTRUCTION PLAN.
9. MATERIAL SUBMITTALS SHALL BE MADE TO OWNER THROUGH THE ENGINEER/ARCHITECT PRIOR TO USE, FOR APPROVAL. ALL MATERIALS SHALL BE MADE IN U.S.A.
10. CONCRETE STRENGTH: 3,000 P.S.I., UNLESS OTHERWISE NOTED.
11. ASPHALT MIX DESIGN SHALL BE SUBMITTED FOR THE ENGINEER'S APPROVAL.
12. THE CONTRACTOR SHALL SUBMIT A CONCRETE JOINT PLAN FOR ALL CONCRETE PAVING FOR WRITTEN APPROVAL BY THE ENGINEER, PRIOR TO CONSTRUCTION.
13. MAINTENANCE OF TRAFFIC WILL BE IN ACCORDANCE WITH THE CURRENT EDITION OF THE MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES.
14. ALL EXISTING STREET SIGNAGE CONFLICTING WITH CONSTRUCTION SHALL BE REMOVED DURING CONSTRUCTION, CLEANED, REPLACED AFTER CONSTRUCTION AND SHALL BE CONSIDERED PART OF MAINTENANCE OF TRAFFIC.
15. FLUORESCENT ORANGE SHEETING SHALL BE USED ON ALL CONSTRUCTION AND TRAFFIC CONTROL SIGNS EXCEPT FOR THOSE DESIGNATED IN PLANS TO BE BLACK LEGEND AND BORDER ON WHITE BACKGROUND.
16. THE CONTRACTOR SHALL PROVIDE PROPER TRAFFIC CONTROL SIGNS AND FLAGGERS TO MAINTAIN ONE LANE TRAFFIC DURING CONSTRUCTION, WHERE LANE CLOSURES ARE NEEDED, UNLESS OTHERWISE NOTED BY THE ENGINEER. ANY ROAD CLOSURES SHALL BE SUBMITTED TO THE ENGINEER FOR APPROVAL PRIOR TO IMPLEMENTATION.
17. ALL PLASTIC DRUMS SHALL HAVE A BALLASTING COLLAR MADE FROM RECYCLED TRUCK TIRES OR OTHER SUITABLE MATERIAL.
18. CONES SHALL BE NARROW PROFILE WITH A MINIMUM HEIGHT OF 28 INCHES AND A MINIMUM WEIGHT OF TEN (10) POUNDS. CONES USED IN SPEED ZONES EQUAL TO OR GREATER THAN 45 MPH SHALL BE NARROW PROFILE WITH A MINIMUM HEIGHT OF 28 INCHES AND A MINIMUM WEIGHT OF FIFTEEN (15) POUNDS. ALL CONES SHALL BE APPROVED BY THE ENGINEER PRIOR TO USE.
19. ALL POST LENGTHS FOR SIGNS SHALL BE FIELD VERIFIED PRIOR TO FABRICATION.
20. THE CONTRACTOR SHALL PROVIDE SHOP DRAWINGS OF ALL GATES FOR WRITTEN APPROVAL BY THE ENGINEER, PRIOR TO CONSTRUCTION. THE CONTRACTOR SHALL FIELD VERIFY ALL GATE LENGTHS PRIOR TO INSTALLATION. ALL LENGTHS SHOWN ON THESE PLANS, IF ANY, ARE OPENING LENGTHS AND MAY NOT REFLECT THE TOTAL LENGTH REQUIRED.
21. CONTRACTOR SHALL BE RESPONSIBLE FOR THE VERIFICATION OF ALL EXISTING TOPOGRAPHIC DATA, LOCATION AND PROTECTION OF ALL EXISTING UTILITIES WITHIN THE WORK AREA AND ALL OTHER SITE CONDITIONS PRIOR TO THE BEGINNING OF CONSTRUCTION. ANY CONFLICT SHALL BE COORDINATED WITH THE CONTRACTOR, OWNER AND ENGINEER/ARCHITECT. THE ENGINEER CANNOT AND DOES NOT WARRANT THAT THIS INFORMATION IS COMPLETE OR ACCURATE.
22. EXISTING UNDERGROUND UTILITY LINES ARE SHOWN ON THE DRAWINGS BASED UPON THE BEST INFORMATION PROVIDED TO THE ENGINEER. THE ENGINEER CANNOT AND DOES NOT WARRANT THAT THIS INFORMATION IS COMPLETE OR ACCURATE. THE CONTRACTOR MUST COORDINATE DIRECTLY WITH THE INVOLVED UTILITY OWNERS TO HAVE UNDERGROUND UTILITY LINES FIELD LOCATED IN ADVANCE OF CONSTRUCTION.
23. UTILITIES SHALL BE RELOCATED BY THE UTILITY OWNERS, WHERE CONFLICT WITH CONSTRUCTION OCCURS, UNLESS NOTED OTHERWISE. CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATION WITH, APPLICATIONS, PERMITS AND FEES THAT MAY BE REQUIRED BY THE UTILITY OWNERS.
24. ANY DISTURBANCE TO EXISTING STREETS AND DRIVEWAYS SHALL BE REPAIRED IN KIND, UNLESS OTHERWISE NOTED.
25. PRIOR TO THE BEGINNING OF ANY EXCAVATION IN PAVED AREAS, ALL EXISTING PAVEMENT SHALL BE SAW CUT TO FULL DEPTH SUCH THAT A STRAIGHT AND UNIFORM VERTICAL EDGE CAN BE ESTABLISHED PRIOR TO REMOVAL OF SAID PAVEMENT FROM THE PROJECT. IF VERTICAL EDGE IS DISTURBED, THEN A SECOND CUT SHALL BE REQUIRED PRIOR TO ASPHALT OR CONCRETE PATCHING. ALL ASPHALT OR CONCRETE SHALL BE REMOVED FROM THE PROJECT SITE PRIOR TO EXCAVATION PROCEDURES. THE PAVEMENT SHALL BE REPAIRED AS DETAILED.
26. WORK FOR THIS PROJECT REQUIRES EXCAVATION IN THE IMMEDIATE VICINITY OF TRAFFIC AND ADJACENT PROPERTIES. THEREFORE, THE RISK OF A FAILURE OCCURRING DURING THE EXCAVATION REQUIRES THAT EXTREME CAUTION BE EXERCISED. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PLACING WHAT BRACING, SHORING OR GROUND SUPPORT SYSTEM THAT IS DEEMED NECESSARY TO PREVENT A FAILURE AND PROTECT THE PERSONS WORKING NEAR THE EXCAVATION, THE PUBLIC THAT MAY BE ABOVE THE EXCAVATION, OR ANY STRUCTURE ADJACENT TO THE EXCAVATION. ALL COSTS FOR ANY PROTECTIVE MEASURES INCLUDING THE MATERIALS AND LABOR FOR DESIGNING, DRAWING AND CONSTRUCTING THE FACILITY SHALL BE INCLUDED IN THE BID PRICE FOR CONTRACT ITEMS.
27. ALL CONDUITS SHALL BE MADE OF COLORED MATERIAL (REGARDLESS OF MATERIAL TYPE) OR INSTALLED IN COLORED PLASTIC SLEEVES. THE CONTRACTOR MAY SUBMIT ALTERNATIVES FOR APPROVAL PRIOR TO CONSTRUCTION. COLORS SHALL BE AS FOLLOWS: GAS – YELLOW; FIRE WATER – WHITE; IRRIGATION WATER – PURPLE; POTABLE WATER – BLUE; POWER – RED; TEL/COMM – WHITE; SEWER – GREEN; SPARE – GRAY.
28. ALL SERVICE CONNECTIONS (FOR ALL UTILITY TYPES) WHICH ARE TEMPORARILY DISCONNECTED DUE TO CONSTRUCTION REQUIREMENTS, DAMAGED OR OTHERWISE DISCONNECT, SHALL BE REPAIRED IN KIND AT THE CONTRACTOR'S EXPENSE, UNLESS OTHERWISE DIRECTED. (NO SEPARATE PAY). SERVICE INTERRUPTIONS SHALL BE COORDINATED WITH THE UTILITY OWNER AND THE AFFECTED STRUCTURE OWNER. EXCEPTION 1: WATER SERVICE CONNECTIONS WHICH ARE DEGRADED BEYOND REPAIR, LEAKING, BROKEN, ETC. PRIOR TO CONSTRUCTION, SHALL BE DOCUMENTED, REPORTED TO THE ENGINEER, REPAIRED AND PAID AS OUTLINED IN THE BID PROPOSAL (SIZE TO MATCH EXISTING). EXCEPTION 2: ANY OTHER SERVICE CONNECTIONS, EXCEPT WATER & SEWER, WHICH ARE DEGRADED BEYOND REPAIR, LEAKING, BROKEN, ETC. PRIOR TO CONSTRUCTION, SHALL BE DOCUMENTED, REPORTED TO THE ENGINEER AND REPORTED TO THE UTILITY OWNER.
29. ALL TRENCHES IN PAVED AREAS SHALL BE REPAIR AS DETAILED. CRUSHED AGGREGATE SHALL ALSO BE INSTALLED AND USED FOR A TEMPORARY SURFACE UNTIL SUCH TIME THAT THE OWNER DECIDES TO ALLOW INSTALLATION OF PAVEMENT (SEE DETAIL). ALL CRUSHED AGGREGATE MAY BE LIMESTONE AND SHALL BE SIZE 825. CONTRACTOR SHALL BE RESPONSIBLE FOR REMOVAL OF EXISTING PAVEMENT PRIOR TO PLACEMENT OF PAVEMENT IN PATCHED AREAS TO MAKE A SMOOTH JOINT WITH THE EXISTING PAVEMENT. SAW CUT TO FULL DEPTH OF EXISTING PAVEMENT SHALL BE REQUIRED ON ALL PAVEMENT REPAIR, UNLESS OTHERWISE DIRECTED. CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING SURFACE IN AN ACCEPTABLE CONDITION UNTIL SUCH TIME AS FINAL PAVEMENT IS INSTALLED.
30. ALL EXISTING MAILBOXES, STREET SIGNS, FENCES, AND OTHER STRUCTURES LOCATED WITHIN THE CONSTRUCTION LIMITS SHALL BE REMOVED AND REPLACED IN KIND AS DICTATED BY CONSTRUCTION ACTIVITIES, UNLESS OTHERWISE NOTED.
31. THE CONTRACTOR SHALL PROVIDE ACCESS TO ALL BUSINESSES AND RESIDENCES AT ALL TIMES DURING CONSTRUCTION.

GRADING NOTES:

1. COST OF ANY CLEARING AND GRUBBING/REMOVAL AND DISPOSAL OF CLEARING AND GRUBBING MATERIAL SHALL BE INCLUDED IN THE PRICE OF THE DEMOLITION REQUIRED FOR THIS PROJECT. OFF SITE DISPOSAL AREAS ARE TO BE CONTRACTOR FURNISHED. THE SITE SHALL BE CLEARED OF ANY RUBBLE AND DEBRIS. CONTRACTOR SHALL BE FAMILIAR WITH THE EXTENT OF THE CLEARING AND GRUBBING PRIOR TO BIDDING.
2. FILL, IF ANY, NEEDED TO BRING THE SUBGRADE TO THE REQUIRED ELEVATION SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR AND SHALL BE AS RECOMMENDED IN THE GEOTECHNICAL REPORTS. EXCESS MATERIAL RESULTING FROM GRADING OPERATIONS SHALL BECOME THE PROPERTY OF THE CONTRACTOR. THE CONTRACTOR SHALL DISPOSE OF ALL SUCH MATERIAL AT AN OFF SITE LOCATION PROVIDED BY THE CONTRACTOR.
3. EARTHWORK REQUIRED BENEATH PROPOSED STRUCTURES AND PAVEMENTS SHALL BE AS RECOMMENDED IN THE GEOTECHNICAL REPORTS.
4. THE CONTRACTOR SHALL STRIP THE TOP SOIL PRIOR TO GRADING. TOP SOIL SHALL BE STOCK PILED ON SITE FOR USE DURING THE LANDSCAPING OPERATIONS. THE TOP SOIL DEPTH IS TYPICALLY 6"–12" ACROSS THE SITE BUT COULD AND DOES VARY. COORDINATE WITH THE GEOTECHNICAL REPORTS.
5. THE SITE SHALL BE GRADED TO DRAIN AS NOTED ON THE GRADING PLAN. ALL GRADES NOTED ON THE GRADING PLAN ARE FINISHED GRADE.
6. GRADE ALL LANDSCAPE AREAS TO DRAIN. ALL PLANTERS AND LANDSCAPE AREAS WILL BE FILLED TO TOP OF CONCRETE CURB, SIDEWALK OR OTHER ADJACENT PAVEMENT WITH TOPSOIL AND SHALL BE FREE OF DEBRIS. TYPICAL DEPTH OF PLACED TOPSOIL SHALL BE 4"–6". VERIFY LOCATIONS THAT WILL REQUIRE GREATER DEPTHS OF TOPSOIL WITH THE LANDSCAPING PLANS.
7. ALL CULVERT CROSS DRAINS AND SIDE DRAINS SHALL BE PROTECTED. NO SEPARATE PAYMENT WILL BE MADE FOR REMOVAL AND REPLACEMENT. ALL CULVERTS AND SIDE DRAINS (EXISTING OR PROPOSED) SHALL BE CLEANED OF ALL FOREIGN MATTER, INCLUDING SILT, PRIOR TO COMPLETION OF THE PROJECT.
8. THE CONTRACTOR SHALL COORDINATE THE INSTALLATION OF ALL SUB–SURFACE UTILITIES AND DRAINAGE STRUCTURES WITH THE GRADING OPERATIONS. ABSOLUTELY NO CUTS OR TRENCHING SHALL BE ALLOWED ONCE FINAL COMPACTION AND GRADES HAVE BEEN ACHIEVED. IF ANY TYPE OF CONDUITS ARE REQUIRED AFTER FINAL COMPACTION IS ACHIEVED, THE CONTRACTOR SHALL INSTALL SAID CONDUITS BY BORING, AT THE CONTRACTOR'S EXPENSE.
9. ALL RCP AND RCAP SHALL BE CLASS III, UNLESS NOTED OTHERWISE.
10. ALL CONCRETE PIPE JOINTS SHALL BE WRAPPED IN TYPE V GEOTEXTILE FABRIC, 24" WIDTH. ALL PICKUP HOLES SHALL BE PLUGGED WITH EPOXY GROUT AND COVERED WITH TYPE V GEOTEXTILE FABRIC TO THE SATISFACTION OF THE ENGINEER.
11. ALL HDPE, CPP AND CPP PIPE AND FITTING SHALL BE DUAL WALL HDPE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY AND ALL FITTINGS REQUIRED TO MAKE ALL CONNECTIONS. ALL HDPE PIPE AND/OR CPP SHALL BE INSTALLED AND BEDDED AS DETAILED, UNLESS OTHERWISE SPECIFIED BY THE MANUFACTURER.
12. THE TOPS OF ALL CLEAN–OUTS SHALL BE INSTALLED AT LEAST 6" ABOVE GRADE AND INSTALLED WITH PRECAST CONCRETE RING TO PROTECT CLEAN–OUT, UNLESS CLEAN–OUT IS LOCATED IN A PAVED AREA. CLEAN–OUTS IN PAVED AREAS SHALL BE INSTALLED BELOW GRADE AND HOUSED IN A TRAFFIC GRADE BOX INSTALLED FLUSH WITH THE FINISH GRADE.
13. ALL STRUCTURE EXCAVATION SHALL BE INCLUDED IN THE COST OF ANY STRUCTURE REQUIRING STRUCTURE EXCAVATION.
14. ALL BEDDING MATERIAL FOR ALL PIPE SHALL BE ABSORBED IN THE PRICE OF THE PIPE LAYING OPERATION.
15. ALL JUNCTION BOXES AND INLETS SHALL BE CONSTRUCTED PER DETAILS. THE CONTRACTOR SHALL SUBMIT SHOP DRAWINGS PRIOR TO CONSTRUCTION FOR APPROVAL BY THE ENGINEER. PRECAST INLET BOTTOMS AND WALLS SHALL BE ALLOWED, IF APPROVED BY THE ENGINEER. ALL INLET TOPS SHALL BE CAST IN PLACE, NO EXCEPTIONS. ALL INLET TOPS SHALL BE CAST TO MATCH THE SLOPE OR GRADE OF THE SURROUNDING PAVEMENT OR CURB, COORDINATE WITH THE GRADING PLAN. PRECAST SUBSURFACE JUNCTION BOXES ARE ALLOWED. ALL LIFT HOLES IN PRECAST STRUCTURES SHALL BE FILLED WITH EPOXY GROUT.
16. NO PIPE SHALL BE LAID IN THE PRESENCE OF WATER.
17. UTILITIES SHALL BE RELOCATED BY THE UTILITY OWNERS, WHERE CONFLICT WITH CONSTRUCTION OCCURS, UNLESS NOTED OTHERWISE. CONTRACTOR IS RESPONSIBLE FOR COORDINATION WITH THE UTILITY OWNER.

WATER NOTES:

1. WHERE SEWER MAIN IS WITHIN 10 FEET OF WATER MAIN HORIZONTALLY. THE BOTTOM OF WATER MAIN SHALL BE AT LEAST 18" FROM THE TOP OF THE SEWER MAIN, UNLESS NOTED OTHERWISE.
2. ALL EXISTING PAVED ROADS SHALL BE BORED WITH CASING, UNLESS OTHERWISE NOTED. ANY DAMAGE TO PAVED ROADS SHALL BE REPAIRED AS DETAILED AT THE CONTRACTOR'S EXPENSE.
3. CONTRACTOR SHALL BE RESPONSIBLE FOR ALL CITY OF HATTIESBURG PERMITS, APPLICATIONS AND CONNECTION FEES.
4. PRESSURE TESTS WILL BE REQUIRED ON ALL WATER MAIN INSTALLED.
5. ALL BACTI–SAMPLES SHALL BE TAKEN BY THE SYSTEM OPERATOR OR HIS REPRESENTATIVES. ANY AND ALL SAMPLING FEE SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR.
6. ALL FITTINGS AND VALVES SHALL BE MECHANICAL JOINT WITH CONCRETE THRUST BLOCK AT ALL BENDS ALONG WITH MEGA LUG JOINT RESTRAINT CONNECTIONS.
7. FULL LENGTH PIPE SECTIONS ARE REQUIRED BEFORE AND AFTER ALL FITTINGS.
8. ALL WATER MAINS SHALL BE DUCTILE IRON, CLASS 350, NO EXCEPTIONS. ALL FIRE WATER SERVICE PIPE (BETWEEN MAIN & PIV) SHALL BE DUCTILE IRON, CLASS 350, NO EXCEPTION. ALL FIRE WATER SERVICE PIPE (BETWEEN PIV & BUILDING) SHALL BE DUCTILE IRON, CLASS 350 OR C–900, 150 PSI PVC, NO EXCEPTIONS. ALL DOMESTIC WATER SERVICE PIPE (BETWEEN MAIN & BUILDING) SHALL BE SCHEDULE 80 PVC, 150 PSI OR APPROVED EQUAL.
9. ALL WATER PIPE INSTALLATION SHALL INCLUDE A TRACER WIRE SYSTEM, AS DETAILED.
10. NO PIPE SHALL BE PLACED IN THE PRESENCE OF WATER.
11. WELL POINTS SHALL BE INCLUDED IN THE PRICE OF THE PIPE LAYING OPERATION (IF REQUIRED).
12. ALL ROAD BORES SHALL BE IN ACCORDANCE WITH THE DETAILS.
13. ALL CASING SHALL BE OF THE SIZE AND TYPE AS NOTED ON THESE PLANS.
14. UNLESS OTHERWISE NOTED, THE DOMESTIC SERVICE CONNECTIONS SHALL INCLUDE A PVC ADAPTER, DOUBLE CHECK VALVE, (FORD BRAND ONLY), CURB STOP (FORD BRAND ONLY), CTS (200) SERVICE TUBING, YOKE (FORD BRAND ONLY) AND PLASTIC ENCLOSURE AS INDICATED ON THE DETAIL. THE CONTRACTOR SHALL COORDINATE WITH THE CITY OF HATTIESBURG TO OBTAIN AND INSTALL A WATER METER.
15. ALL BENDS SHOWN IN THE PROPOSED WATERLINE SHALL BE ACCOMPLISHED THROUGH THE USE OF THE REQUIRED FITTINGS (22.5°, 30°, 45°....). SINGLE 90° BEND FITTINGS SHALL NOT BE PERMITTED UNLESS SPECIFICALLY NOTED ON THE PLANS AND/OR APPROVED BY THE ENGINEER. 90° BENDS SHALL BE ACCOMPLISHED BY USING MULTIPLE SMALLER BEND FITTINGS. BENDS SHOWN ON THE PLAN SHEETS SHALL BE VERIFIED BY THE CONTRACTOR PRIOR TO BIDDING AND CONSTRUCTION. ONLY MAJOR BENDS ARE SHOWN ON THE PLANS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL FITTINGS NECESSARY TO INSTALL THE PROPOSED WATER LINE.

SEWER NOTES:

1. WHERE SEWER MAIN IS WITHIN 10 FEET OF WATER MAIN HORIZONTALLY. THE BOTTOM OF WATER MAIN SHALL BE AT LEAST 18" FROM THE TOP OF THE SEWER MAIN, UNLESS NOTED OTHERWISE.
2. CONTRACTOR SHALL BE RESPONSIBLE FOR ALL CITY OF HATTIESBURG PERMITS, APPLICATIONS AND CONNECTION FEES.
3. INFILTRATION/EXFILTRATION AND MANDREL TESTS WILL BE REQUIRED ON ALL SEWER MAINS INSTALLED UNDER THIS PROJECT.
4. ALL MANHOLES SHALL BE 48" IN DIAMETER, WITH ECCENTRIC TOP CONE SECTIONS, UNLESS OTHERWISE NOTED.
5. MANHOLES SHALL HAVE 20 MIL. COAL TAR EPOXY COATING ON THE INSIDE, OR APPROVED EQUAL, UNLESS OTHERWISE NOTED.
6. THE FINISHED ELEVATION OF ALL MANHOLE TOPS FOR MANHOLES TO BE CONSTRUCTED IN PAVED AREAS SHALL BE AT EXISTING PAVEMENT ELEVATION OR AS DIRECTED BY THE ENGINEER. ELEVATIONS SHALL BE TAKEN FROM CUT SHEETS FURNISHED BY THE CONTRACTOR FOR APPROVAL BY THE ENGINEER AT LEAST SEVEN (7) DAYS PRIOR TO CONSTRUCTION.
7. ALL SINGLE DROPS FOR SEWER PIPE 8" AND UNDER IN DIAMETER SHALL BE PLACED INSIDE THE MANHOLE AS DETAILED. ALL MULTIPLE DROPS OR DROPS FOR SEWER PIPE OVER 8" IN DIAMETER SHALL BE PLACED OUTSIDE OF THE MANHOLE AS DETAILED, UNLESS OTHERWISE DIRECTED BY THE ENGINEER.
8. ALL NEW PVC SEWER PIPE, SERVICES AND FITTINGS SHALL BE SDR 26, OF SIZE NOTED ON THE PLAN SHEETS AND SHALL BE GREEN IN COLOR. ALL NEW SEWER PIPE SHALL BE INSTALLED AT A MINIMUM GRADE OF 0.50%, UNLESS OTHERWISE DIRECTED BY THE ENGINEER. (SEE PLAN SHEETS FOR DESIGN GRADES)
9. ALL SEWER INSTALLATION SHALL INCLUDE A TRACER WIRE SYSTEM, AS DETAILED.
10. ALL BEDDING MATERIAL FOR ALL PIPE SHALL BE ABSORBED IN THE PRICE OF THE PIPE LAYING OPERATION.
11. ALL SELECT FILL MATERIAL SHALL MEET THE SPECIFICATIONS FOR CLASS 9, GROUP C AND MODIFIED FOR TO CONSIST OF A PLASTICITY INDEX (PI) BETWEEN 5 AND 15. SAND SHALL NOT BE ALLOWED. THE SELECT FILL MATERIAL SHALL BE INSTALLED AT THE DIRECTION OF THE ENGINEER OR HIS REPRESENTATIVE.
12. NO PIPE SHALL BE PLACED IN THE PRESENCE OF WATER.
13. WELL POINTS SHALL BE INCLUDED IN THE PRICE OF THE PIPE LAYING OPERATION (IF REQUIRED).
14. THE CONTRACTOR SHALL COORDINATE ALL NEW SEWER SERVICE LOCATIONS WITH BUILDING CONTRACTOR.
15. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING BRACING, SHORING OR ANY GROUND SUPPORT SYSTEM REQUIRED TO PREVENT A FAILURE FROM OCCURRING DURING EXCAVATION. ALL COST FOR ANY PROTECTIVE MEASURES, INCLUDING THE MATERIALS AND LABOR FOR DESIGNING AND CONSTRUCTING THE SUPPORT SYSTEM, SHALL BE INCLUDED IN THE BID PRICE FOR CONTRACT ITEMS.
16. ALL CLEAN–OUTS SHALL BE INSTALLED AS DETAILED, NO EXCEPTIONS.
17. ALL FITTINGS REQUIRED FOR DUCTILE IRON OR PVC PIPE SHALL BE INCLUDED IN THE APPROPRIATE BID ITEM FOR THE PIPE AND AT NO ADDITIONAL COST TO THE PROJECT EXCEPT SERVICE TEE'S AND CLEANOUTS. CLEANOUTS SHALL INCLUDE TEE, SERVICE CAP, TRAFFIC COVER IF NEEDED, AND ANY PIPE LENGTH TO BRING CLEANOUT TO SURFACE GRADE.

EROSION CONTROL NOTES:

1. PROTECTING THE SITE FROM EROSION SHALL BE A REQUIREMENT OF THIS CONTRACT. THE EROSION CONTROL DEVICES REFERENCED IN THESE PLANS ARE A MINIMUM REQUIREMENT. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO INSURE THAT SILT DOES NOT LEAVE THE CONSTRUCTION SITE OR CONTAMINATE WATERS OF THE U.S. DURING CONSTRUCTION. THE CONTRACTOR SHALL MAINTAIN THE PLAN DURING CONSTRUCTION. MAINTENANCE SHALL BE PERFORMED A MAXIMUM OF 24 HOURS AFTER SILT ACCUMULATION. THE CONTRACTOR SHALL MAINTAIN THE PLAN DAILY DURING CONSTRUCTION.
2. PROPER MAINTENANCE OF STREETS, INCLUDING DUST CONTROL, SHALL BE STRICTLY ADHERED TO.
3. UNLESS OTHERWISE NOTED ON THE PLAN SHEETS, ALL DISTURBED AREAS SHALL BE FERTILIZED AND SEEDED WITH PER THE VEGETATION SCHEDULE FOR TEMPORARY GRASSING. PERMANENT CENTIPEDE SOLID SOD SHALL BE INSTALLED IN ALL LANDSCAPED AREAS, UNLESS OTHERWISE NOTED. THE CONTRACTOR SHALL BE REQUIRED TO ESTABLISH A FULL COVERAGE OF PERMANENT GRASS GROWTH PRIOR TO COMPLETION OF THE PROJECT.
4. THE EROSION CONTROL MEASURES SHOWN ON THESE PLANS SHALL BE REQUIRED UNTIL GRASSING IS ESTABLISHED AND LANDSCAPING HAS BEEN PROPERLY INSTALLED TO THE SATISFACTION OF THE ARCHITECT/OWNER.
5. THE TYPICAL TEMPORARY EROSION CONTROL MEASURES AND TYPICAL DITCH TREATMENTS REFERENCED IN THESE PLANS ARE A MINIMUM REQUIREMENT. TEMPORARY EROSION CONTROL MEASURES SHALL BE INSTALLED IN LOCATIONS BASED ON THE SWPPP PLANS IN THESE DOCUMENTS AND AS DIRECTED BY THE ENGINEER.
6. THE CONTRACTOR SHALL ADHERE TO ALL CURRENT MISSISSIPPI DEPARTMENT OF ENVIRONMENTAL QUALITY GUIDELINES.

GENERAL NOTES

G:\PROJECTS\Albert and Associates\15819 - Hattiesburg Public Safety Complex\15819_Cover_Notes_v1.dwg, GN1, 9/21/2018 3:56:23 PM

DEMOLITION NOTES (FOR INFORMATION PURPOSES ONLY):

1. THE CONTRACTOR SHALL COORDINATE ALL ITEMS MARKED FOR DEMOLITION WITH THE OWNER AND THE ARCHITECT.
2. THE SAFETY OF THE GENERAL PUBLIC WITHIN THE VICINITY OF THE CONSTRUCTION AREA IS EXTREMELY IMPORTANT. THE CONTRACTOR SHALL POST AND MAINTAIN, TO THE OWNER'S SATISFACTION, SIGNS THAT DIRECT THE GENERAL PUBLIC AROUND THE CONSTRUCTION AREAS. THE CONTRACTOR SHALL COORDINATE WITH THE OWNER PRIOR TO CONSTRUCTION.
3. THE CONTRACTOR SHALL TAKE CARE NOT TO DAMAGE ANY EXISTING STRUCTURES, PAVEMENTS OR ANY OTHER SITE COMPONENTS NOT DESIGNATED FOR DEMOLITION AND REMOVAL. ANY SUCH ITEMS WHICH ARE DAMAGED SHALL BE REPAIRED SOLELY AT THE CONTRACTOR'S EXPENSE.
4. VOIDS CREATED BY THE REMOVAL OF POSTS, CONCRETE ANCHORS, FOOTINGS, ETC., SHALL BE BACKFILLED AND TAMPED IN ACCORDANCE WITH SECTION 203 OF THE MISSISSIPPI STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION (LATEST EDITION).
5. THE CONTRACTOR SHALL BE REQUIRED TO INSTALL ORANGE CONSTRUCTION FENCE AROUND ALL CONSTRUCTION AREAS ON CAMPUS WITH A CLEARLY DESIGNATED CONSTRUCTION ENTRANCE AND EXIT. THE CONTRACTOR SHALL PROVIDE SUBSTANTIAL PROTECTION AROUND EXCAVATION SITES. COORDINATION WITH THE ARCHITECT SHALL BE REQUIRED.
6. UTILITIES DESIGNATED FOR DEMOLITION HAVE A DIRECT AFFECT ON THE EXISTING STRUCTURES ON THE PROJECT SITE. THE CONTRACTOR SHALL COORDINATE ALL SITE UTILITY DEMOLITION AND SITE UTILITY INSTALLATION WITH THE UTILITY OWNERS IN ORDER TO MINIMIZE DISRUPTION OF THE UTILITY SERVICES TO EXISTING STRUCTURES.
7. ALL BUILDINGS NOTED FOR DEMOLITION, SHALL BE RAZED TO 24" BELOW EXISTING GRADE OR PROPOSED FINISHED GRADE, WHICH EVER IS LOWER. ALL BUILDINGS NOTED FOR DEMOLITION SHALL BE DE-ENERGIZED PRIOR TO THE START OF DEMOLITION.
9. ALL EXISTING SUBSURFACE STRUCTURES (INLETS, MANHOLES, FOUNDATIONS, ETC) AND PIPES WITHIN 5 FEET OF A PROPOSED BUILDING SHALL BE REMOVED. OTHERWISE, SAID STRUCTURES AND PIPES SHALL BE RAZED TO 24" BELOW EXISTING GRADE OR PROPOSED FINISHED GRADE, WHICH EVER IS LOWER AND ABANDONED AS NOTED ON THE DEMOLITION PLAN.
10. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE REMOVAL OF EXISTING MANHOLES AND SEWER PIPES, AS NOTED ON THE PLAN SHEETS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE DISPOSAL OF ANY AND ALL WASTE TO AN APPROVED WASTE FACILITY BY AN APPROVED WASTE HANDLER. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE DISPOSAL OF ALL REMOVED MANHOLES AND SEWER PIPES AT AN APPROVED DISPOSAL SITE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL HAZARDOUS MATERIALS FEES, APPLICATIONS AND PERMITS REQUIRED TO DISPOSE OF ALL WASTE AND REMOVED MATERIALS.
11. THE CONTRACTOR SHALL COORDINATE WITH OWNER PRIOR TO DEMOLITION REGARDING SALVAGED EQUIPMENT AND MATERIALS. THE OWNER SHALL PROVIDE A COMPLETE AND ITEMIZED LIST OF EQUIPMENT AND MATERIALS TO BE SALVAGED FROM THE SITE DURING DEMOLITION. SALVAGED EQUIPMENT AND MATERIALS SHALL BE SHRINK WRAPPED, ON PALLETS AND DELIVERED TO THE OWNER IN A MANNER AND AT A LOCATION DESIGNATED BY THE OWNER. ALL REMAINING EQUIPMENT AND MATERIALS SHALL BE PROPERTY OF THE CONTRACTOR AND SHALL BE DISPOSED OF AT THE LOCATION SUITABLE TO MATERIAL SUCH MATERIALS. ALL SALVAGE, TRANSPORTATION, DEMOLITION AND DISPOSAL OPERATIONS REGARDING THE DEMOLITION PLAN SHALL BE THE CONTRACTOR'S RESPONSIBILITY AND DONE AT THE CONTRACTOR'S EXPENSE.

CONSTRUCTION PHASING NOTES:

1. DUE TO THE LARGE AND INVOLVED NATURE OF THIS PROJECT, THE CONTRACTOR SHALL PROVIDE A DETAILED 'PHASES OF CONSTRUCTION', TO THE ENGINEER/ARCHITECT PRIOR TO THE START OF CONSTRUCTION.
2. THE CONTRACTOR SHALL FULLY COOPERATE WITH THE MULTIPLE CONTRACTORS WHICH WILL BE ON SITE TO CONSTRUCT THE VARIOUS PROPOSED STRUCTURES. COORDINATION TO AVOID DELAYS SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR.
3. ALL PROPOSED INFRASTRUCTURE IMPROVEMENTS SHALL BE INSTALLED TO THE SATISFACTION OF THE ENGINEER, THE CITY ENGINEER & THE DIRECTOR OF THE WATER & SEWER DEPARTMENT PRIOR TO THE CONNECTION OF ANY SERVICES TO THE PROPOSED BUILDINGS.

ABANDONMENT / REMOVAL NOTES:

1. ALL EXISTING SUBSURFACE STRUCTURES (SUCH AS MANHOLES & INLETS) NOTED TO BE REMOVED SHALL BE REMOVED ENTIRELY. REMOVED ITEMS SHALL BE DISPOSED OF APPROPRIATELY.

2. ALL EXISTING SUBSURFACE STRUCTURES (SUCH AS MANHOLES & INLETS) NOTED TO BE ABANDONED SHALL BE MODIFIED AS FOLLOWS:
   - 2.1. REMOVE AND DISPOSE OF ANY SANITARY WASTE.
   - 2.2. REMOVE COVER, FRAME AND THE TOP 24" (36" IF LOCATED IN ROADWAY) OF THE STRUCTURE. DISPOSE OF REMOVED ITEMS.
   - 2.3. FILL THE STRUCTURE WITH SAND.
   - 2.4. CAP THE STRUCTURE WITH 2500 PSI, NON-REINFORCED CONCRETE (6" DEPTH).
   - 2.5. BACKFILL WITH NATIVE SOIL MATERIAL AND/OR FILL MATERIAL (CL B9) AND COMPACT. GRADE TO DRAIN AS REQUIRED. GRASS DISTURBED AREA OR REPAIR PAVEMENT AREAS.
3. ALL EXISTING PIPES NOTED TO BE REMOVED, SHALL BE REMOVED ENTIRELY. REMOVED ITEMS SHALL BE DISPOSED OF APPROPRIATELY.
4. ALL EXISTING PIPES NOTED TO BE ABANDONED, SHALL BE MODIFIED AS FOLLOWS:
   - 4.1. REMOVE AND DISPOSE OF ANY SANITARY WASTE.
   - 4.2. FILL THE PIPE WITH FLOWABLE FILL.
   - 4.3. PLUG ENDS.
5. WHERE ABANDONED PIPES AND/OR SUBSURFACE STRUCTURES CONFLICT WITH THE NEW CONSTRUCTION, THE EXISTING PIPES AND/OR SUBSURFACE STRUCTURES SHALL BE REMOVED, UNLESS OTHERWISE DIRECTED BY THE ENGINEER OR NOTED.

SPECIAL UTILITY NOTES:

1. PRIOR TO ANY DEMOLITION OPERATIONS, THE CONTRACTOR SHALL VERIFY THE EXISTING ELECTRICAL POWER SYSTEM TO DETERMINE IF MODIFICATIONS ARE REQUIRED TO ENSURE CONTINUED ELECTRICAL POWER SERVICE TO THE ADJACENT STRUCTURES. THE CONTRACTOR SHALL SUBMIT A PLAN OF ACTION TO THE PROJECT ENGINEER FOR APPROVAL AND COORDINATE ANY INTERRUPTIONS WITH THE PROJECT OWNER AND THE STRUCTURES OWNER(S). THE CONTRACTOR SHALL GIVE THE OWNER(S) 24 HOURS NOTICE (MIN) OF ANY INTERRUPTIONS IN SERVICE.
2. PRIOR TO ANY DEMOLITION OPERATIONS, THE CONTRACTOR SHALL VERIFY THE EXISTING WATER AND SEWER SYSTEM TO DETERMINE IF MODIFICATIONS ARE REQUIRED TO ENSURE CONTINUED SERVICE TO THE ADJACENT STRUCTURES. THE CONTRACTOR SHALL SUBMIT A PLAN OF ACTION TO THE PROJECT ENGINEER FOR APPROVAL AND COORDINATE ANY INTERRUPTIONS WITH THE PROJECT OWNER AND THE STRUCTURES OWNER(S). THE CONTRACTOR SHALL GIVE THE OWNER(S) 24 HOURS NOTICE (MIN) OF ANY INTERRUPTIONS IN SERVICE.

SPECIAL NOTE:

THIS PLAN WAS BASED ON THE EXISTING FIELD CONDITIONS AS OF DECEMBER 2012. THE SITE DEMOLITION HAS BEEN COMPLETED BY THE OWNER PRIOR TO THE ADVERTISEMENT OF THIS PROJECT. THIS SHEET IS FOR INFORMATIONAL USE ONLY. THE CONTRACTOR IS STRONGLY ENCOURAGED TO VERIFY THE STATUS OF THE DEMOLITION PRIOR TO CONSTRUCTION. THE ENGINEER DOES NOT WARRANT OR GUARANTEE THAT THE DEMOLITION IS COMPLETE BASED ON THE REQUIREMENTS OF THIS SHEET.

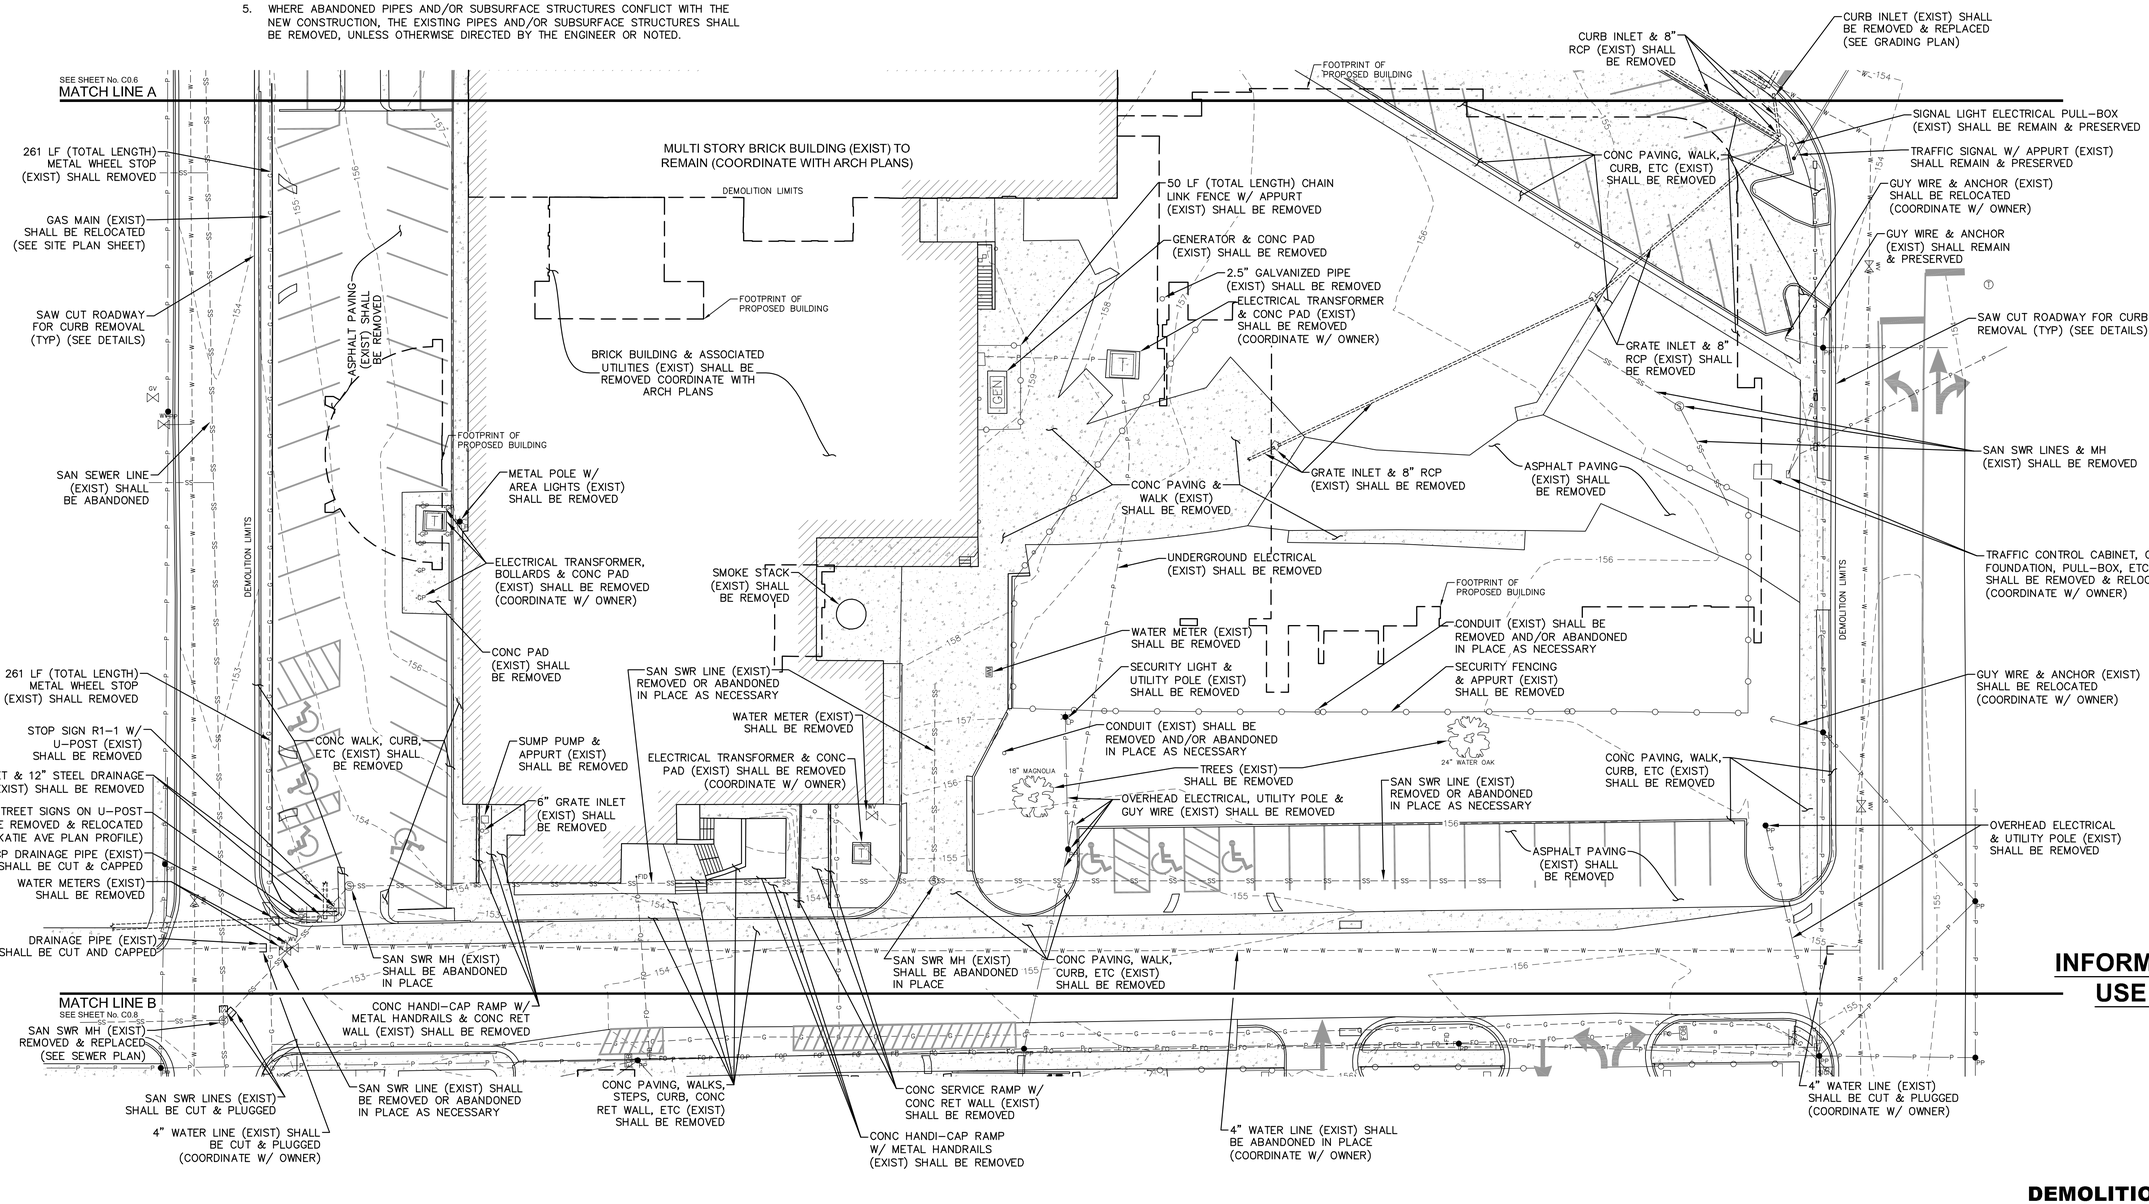
ABANDONMENT / REMOVAL NOTES:

1. ALL EXISTING SUBSURFACE STRUCTURES (SUCH AS MANHOLES & INLETS) NOTED TO BE REMOVED SHALL BE REMOVED ENTIRELY. REMOVED ITEMS SHALL BE DISPOSED OF APPROPRIATELY.



2. ALL EXISTING SUBSURFACE STRUCTURES (SUCH AS MANHOLES & INLETS) NOTED TO BE ABANDONED SHALL BE MODIFIED AS FOLLOWS:
   - 2.1. REMOVE AND DISPOSE OF ANY SANITARY WASTE.
   - 2.2. REMOVE COVER, FRAME AND THE TOP 24" (36" IF LOCATED IN ROADWAY) OF THE STRUCTURE. DISPOSE OF REMOVED ITEMS.
   - 2.3. FILL THE STRUCTURE WITH SAND.
   - 2.4. CAP THE STRUCTURE WITH 2500 PSI, NON-REINFORCED CONCRETE (6" DEPTH).
   - 2.5. BACKFILL WITH NATIVE SOIL MATERIAL AND/OR FILL MATERIAL (CL B9) AND COMPACT. GRADE TO DRAIN AS REQUIRED. GRASS DISTURBED AREA OR REPAIR PAVEMENT AREAS.
3. ALL EXISTING PIPES NOTED TO BE REMOVED, SHALL BE REMOVED ENTIRELY. REMOVED ITEMS SHALL BE DISPOSED OF APPROPRIATELY.
4. ALL EXISTING PIPES NOTED TO BE ABANDONED, SHALL BE MODIFIED AS FOLLOWS:
   - 4.1. REMOVE AND DISPOSE OF ANY SANITARY WASTE.
   - 4.2. FILL THE PIPE WITH FLOWABLE FILL.
   - 4.3. PLUG ENDS.
5. WHERE ABANDONED PIPES AND/OR SUBSURFACE STRUCTURES CONFLICT WITH THE NEW CONSTRUCTION, THE EXISTING PIPES AND/OR SUBSURFACE STRUCTURES SHALL BE REMOVED, UNLESS OTHERWISE DIRECTED BY THE ENGINEER OR NOTED.

SPECIAL NOTE:

THIS PLAN WAS BASED ON THE EXISTING FIELD CONDITIONS AS OF DECEMBER 2012. THE SITE HAS BEEN ALTERED BY THE OWNER PRIOR TO THE ADVERTISEMENT OF THIS PROJECT. THE CONTRACTOR IS STRONGLY ENCOURAGED TO VERIFY THE STATUS OF THE DEMOLITION PRIOR TO BIDDING THIS SHEET.

SPECIAL UTILITY NOTES:

1. PRIOR TO ANY DEMOLITION OPERATIONS, THE CONTRACTOR SHALL VERIFY THE EXISTING ELECTRICAL POWER SYSTEM TO DETERMINE IF MODIFICATIONS ARE REQUIRED TO ENSURE CONTINUED ELECTRICAL POWER SERVICE TO THE ADJACENT STRUCTURES. THE CONTRACTOR SHALL SUBMIT A PLAN OF ACTION TO THE PROJECT ENGINEER FOR APPROVAL AND COORDINATE ANY INTERRUPTIONS WITH THE PROJECT OWNER AND THE STRUCTURES OWNER(S). THE CONTRACTOR SHALL GIVE THE OWNER(S) 24 HOURS NOTICE (MIN) OF ANY INTERRUPTIONS IN SERVICE.
2. PRIOR TO ANY DEMOLITION OPERATIONS, THE CONTRACTOR SHALL VERIFY THE EXISTING WATER AND SEWER SYSTEM TO DETERMINE IF MODIFICATIONS ARE REQUIRED TO ENSURE CONTINUED SERVICE TO THE ADJACENT STRUCTURES. THE CONTRACTOR SHALL SUBMIT A PLAN OF ACTION TO THE PROJECT ENGINEER FOR APPROVAL AND COORDINATE ANY INTERRUPTIONS WITH THE PROJECT OWNER AND THE STRUCTURES OWNER(S). THE CONTRACTOR SHALL GIVE THE OWNER(S) 24 HOURS NOTICE (MIN) OF ANY INTERRUPTIONS IN SERVICE.

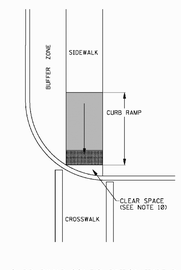
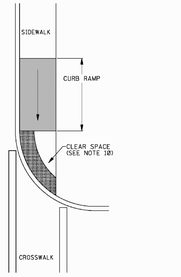
STATE	PROJECT NO.
MISS.	

CURB RAMP CONFIGURATION: TYPE A

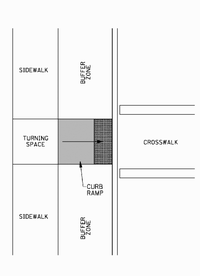


CURB RAMP CONFIGURATION: TYPE B

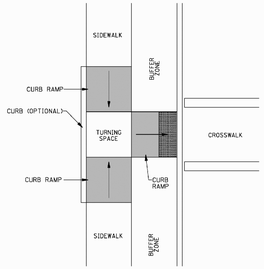


CURB RAMP CONFIGURATION: TYPE C

GENERAL NOTES:



1. FOR DIMENSIONS & GEOMETRIC VALUES REFER TO MK. NO. CR-1.
2. THE CONFIGURATIONS SHOWN GENERALLY REPRESENT THE MOST COMMON SITUATIONS ENCOUNTERED. THEY ARE INTENDED TO PRESENT CURB RAMP DESIGN CONCEPTS. SITE CONDITIONS AT INDIVIDUAL LOCATIONS REQUIRE SPECIFIC DESIGNS. CURB RAMP DESIGNS MUST BE CONSISTENT WITH THE PROVISIONS OF MK. NOS. CR-1, CR-2, CR-3 AND CR-4.
3. COORDINATE TRAFFIC CONTROL DEVICES, UTILITY LOCATIONS, SIGNS, LIGHTING, DRAINAGE INLETS, ETC. WITH THE LOCATIONS OF PEDESTRIAN ACCESS ROUTE AT ALL CURB RAMP LOCATIONS. GUIDANCE FOR CROSSWALK MARKINGS AND TRAFFIC CONTROL DEVICES IS PROVIDED IN THE MUTCD.
4. DETECTABLE WARNINGS SHOWN ON THIS SHEET ARE FOR ILLUSTRATION ONLY. FOR SPECIFIC PLACEMENT ORIENTATIONS AND DIMENSIONS REFER TO MK. NO. CR-4.
5. THE CROSS SLOPE OF CURB RAMPS, BLENDED TRANSITIONS, AND TURNING SPACES SHALL BE 2% MAXIMUM (1.5% PREFERRED). AT PEDESTRIAN STREET CROSSINGS WITHOUT YIELD OR STOP CONTROL AND AT MIDBLOCK PEDESTRIAN STREET CROSSINGS, THE CROSS SLOPE SHALL BE PERMITTED TO EQUAL THE STREET OR HIGHWAY GRADE.
6. DIAGONAL CURB RAMPS ARE UNACCEPTABLE IN NEW CONSTRUCTION, THEY MAY BE USED FOR ALTERATIONS ONLY IF IT IS THE ONLY OPTION THAT WILL WORK.
7. GRATES SHALL NOT BE LOCATED ON CURB RAMPS, BLENDED TRANSITIONS, TURNING SPACES, OR LANDINGS. ACCESS COVERS OF SIMILAR SURFACES SHALL COMPLY WITH APPLICABLE SURFACE REQUIREMENTS.
8. UTILITIES, SIGNS, AND OTHER FIXED OBJECTS SHALL NOT BE PLACED ON A CURB RAMP, BLENDED TRANSITION, OR IN A MANNER THAT INTERFERES WITH THE USE OF THE CURB RAMP.
9. THE SURFACE OF ALL CURB RAMPS SHALL BE STABLE, FIRM, AND SLIP RESISTANT. A COARSE BROOM FINISH RUNNING PERPENDICULAR TO THE SLOPE IS RECOMMENDED ON CONCRETE RAMP SURFACES, EXCLUSIVE OF THE DETECTABLE WARNING FIELDS.
10. THERE SHALL BE A CLEAR SPACE AT THE BOTTOM OF THE ALTERNATE PERPENDICULAR RETURNED CURB RAMP. IT SHALL SLOPE TO DRAIN RUNOFF TO STREET/GUTTER AND HAVE A MAXIMUM SLOPE OF 2% (1.5% PREFERRED).
11. TURNING SPACES MAY OVERLAP WITH ADJACENT TURNING SPACES OR A SINGLE TURNING SPACE MAY SERVE MULTIPLE CURB RAMPS.
12. TURNING SPACES MAY OVERLAP WITH THE CLEAR GROUND SPACE REQUIRED AT PEDESTRIAN SIGNAL PUSH BUTTONS.
13. THE CLEAR WIDTH OF PEDESTRIAN ACCESS ROUTES WITHIN MEDIANS AND PEDESTRIAN REFUGE ISLANDS SHALL BE 5' MINIMUM.
14. BEYOND THE BOTTOM GRADE BREAK, A TURNING SPACE OF 4' MINIMUM BY 4' MINIMUM SHALL BE PROVIDED WITHIN THE WIDTH OF THE PEDESTRIAN STREET CROSSING AND WHOLLY OUTSIDE THE PARALLEL VEHICLE TRAVEL LANE.



CURB RAMP CONFIGURATION: TYPE D

CURB RAMP CONFIGURATION: TYPE E

CURB RAMP CONFIGURATION: TYPE F

CURB RAMP CONFIGURATION: TYPE G
MID BLOCK CROSSING

THE CURB BEHIND THE TURNING SPACE AND RAMPS IS NOT REQUIRED BUT IS SUGGESTED FOR RETAINING SOIL, AND PROVIDING AN EDGE FOR PEDESTRIANS WITH VISUAL IMPAIRMENTS.

NOTE: SEE MK. NO. CR-4 FOR DETECTABLE WARNING DIMENSIONS AND PLACEMENT ORIENTATION.

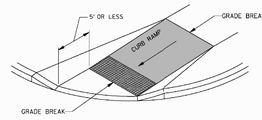
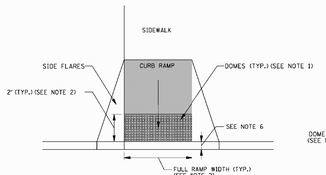
WORKING NUMBER CR-2

ISSUE DATE: AUGUST 01, 2017



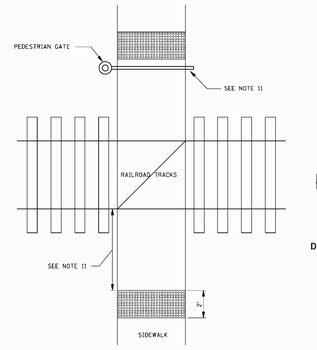
SHEET NUMBER 6422

STATE	PROJECT NO.
MISS.	

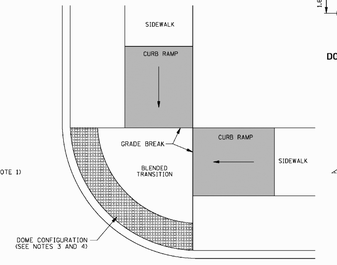


DETECTABLE WARNING PLACEMENT DETAIL 1

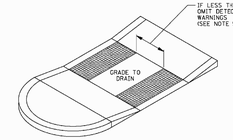
NOTE: IF THE DISTANCE FROM THE GRADE BREAK IS GREATER THAN OF EQUAL TO 5', DETECTABLE WARNINGS SHALL BE PLACED ALONG THE RADIUS OF THE CURVE AS SHOWN IN THE ABOVE DETAIL.



DETECTABLE WARNING PLACEMENT DETAIL 2



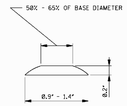
NOTE: IF THE DISTANCE FROM THE GRADE BREAK IS LESS THAN OR EQUAL TO 5', DETECTABLE WARNINGS SHALL BE PLACED ON THE CURB RAMP ALONG THE BOTTOM GRADE BREAK WITH ONE CORNER 5' TO 6' FROM THE FRONT OF THE CURB OR EDGE OF THE ROADWAY.



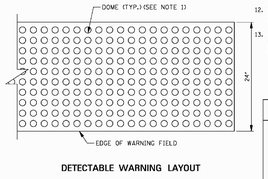
DETECTABLE WARNING AT CURB RAMP

DETECTABLE WARNINGS AT RAILROAD CROSSING

DETECTABLE WARNING AT BLENDED TRANSITION (CONFIGURATION: TYPES K AND J)



DETECTABLE WARNINGS AT MEDIAN ISLANDS



NON-ELEVATED CROSSING

DOME SPACING

DOME SECTION

DETECTABLE WARNING LAYOUT

GENERAL NOTES:

1. THE DETAILS PROVIDED ARE NOT DRAWN TO SCALE. THE QUANTITY OF DOMES DEPICTED ON THE DETECTABLE WARNING UNIT (THE DOMES AND THE ENTIRE 2' LEVEL SURFACE) IS FOR ILLUSTRATION ONLY.
2. ALL DETECTABLE WARNINGS SHOWN ON THIS SHEET SHALL BE PAID FOR - PER SQUARE FEET, UNLESS OTHERWISE NOTED IN THE PLANS.

DETECTABLE WARNING UNIT DIMENSIONS:

3. DETECTABLE WARNING SURFACES SHALL EXTEND 2' MINIMUM IN THE DIRECTION OF PEDESTRIAN TRAVEL. AT CURB RAMPS AND BLENDED TRANSITIONS, DETECTABLE WARNING SURFACES SHALL EXTEND THE FULL WIDTH OF THE RAMP RUN (EXCLUDING ANY FLARED SIDES), BLENDED TRANSITION, OR TURNING SPACES. AT PEDESTRIAN AT-GRADE RAIL CROSSINGS NOT LOCATED WITHIN A STREET OR HIGHWAY, DETECTABLE WARNINGS SHALL EXTEND THE FULL WIDTH OF THE PUBLIC USE AREAS OF THE PLATFORM, AT BOARDING AND ALIGHTING AREAS, DETECTABLE WARNING SURFACES SHALL EXTEND THE FULL LENGTH OF THE PUBLIC USE AREAS OF THE PLATFORM, AT BOARDING AND ALIGHTING AREAS AT SIDEWALK OR STREET LEVEL TRANSIT STOPS FOR RAIL VEHICLES, DETECTABLE WARNING SURFACES SHALL EXTEND THE FULL LENGTH OF THE TRANSIT STOP.

DOME ALIGNMENT:

4. THE ROWS OF DOMES SHALL BE ALIGNED TO BE PERPENDICULAR OR RADIAL TO THE GRADE BREAK AT THE RAMP LANDING OR BETWEEN THE CURB RAMP AND THE STREET.
5. WHERE DOMES ARE ARRAYED RADIALLY THEY MAY DIFFER IN DOME DIAMETER AND CENTER-TO-CENTER SPACING WITHIN THE RANGES SPECIFIED ON THIS SHEET.

COLOR REQUIREMENTS:

6. DETECTABLE WARNING SURFACES SHALL CONTRAST VISUALLY WITH ADJACENT GUTTER, STREET OR HIGHWAY, OR PEDESTRIAN ACCESS ROUTE SURFACE, EITHER LIGHT-ON-DARK OR DARK-ON-LIGHT.

DETECTABLE WARNINGS LOCATIONS:

7. ON PERPENDICULAR CURB RAMPS, WHERE THE ENDS OF THE BOTTOM GRADE BREAK ARE IN FRONT OF THE BACK OF CURB, DETECTABLE WARNING SURFACES SHALL BE PLACED AT THE BACK OF CURB. WHERE THE ENDS OF THE BOTTOM GRADE BREAK ARE BEHIND THE BACK OF CURB AND THE DISTANCE FROM EITHER END OF THE BOTTOM GRADE BREAK TO THE BACK OF CURB IS 5' OR LESS, DETECTABLE WARNING SURFACES SHALL BE PLACED ON THE RAMP RUN WITHIN ONE DOME SPACING OF THE BOTTOM GRADE BREAK. WHERE THE ENDS OF THE BOTTOM GRADE BREAK ARE BEHIND THE BACK OF CURB AND THE DISTANCE FROM EITHER END OF THE BOTTOM GRADE BREAK TO THE BACK OF CURB IS MORE THAN 5', DETECTABLE WARNING SURFACES SHALL BE PLACED ON THE LOWER LANDING AT THE BACK OF CURB.
8. ON PARALLEL CURB RAMPS, DETECTABLE WARNING SURFACES SHALL BE PLACED ON THE TURNING SPACE AT THE FLUSH TRANSITION BETWEEN THE STREET AND SIDEWALK.
9. ON BLENDED TRANSITIONS, DETECTABLE WARNING SURFACES SHALL BE PLACED AT THE BACK OF CURB, WHERE RAISED PEDESTRIAN STREET CROSSINGS, DEPRESSED CORNERS, OR OTHER LEVEL PEDESTRIAN STREET CROSSINGS ARE PROVIDED, DETECTABLE WARNING SURFACES SHALL BE PLACED AT THE FLUSH TRANSITION BETWEEN THE STREET AND THE SIDEWALK.
10. AT CUT-THROUGH PEDESTRIAN REFUGE ISLANDS, DETECTABLE WARNING SURFACES SHALL BE PLACED AT THE EDGES OF THE PEDESTRIAN ISLAND AND SHALL BE SEPARATED BY A 2' MINIMUM LENGTH OF SURFACE WITHOUT DETECTABLE WARNINGS.
11. AT PEDESTRIAN AT-GRADE RAIL CROSSINGS NOT LOCATED WITHIN A STREET OR HIGHWAY, DETECTABLE WARNING SURFACES SHALL BE PLACED ON EACH SIDE OF THE RAIL CROSSING. THE EDGE OF THE DETECTABLE WARNING SURFACE NEAREST THE RAIL CROSSING SHALL BE 6" MINIMUM AND 15' MAXIMUM FROM THE CENTERLINE OF THE NEAREST RAIL. WHERE PEDESTRIAN GATES ARE PROVIDED, DETECTABLE WARNING SURFACES SHALL BE PLACED ON THE SIDE OF THE GATES OPPOSITE THE RAIL.
12. AT BOARDING PLATFORMS FOR BUSES AND RAIL VEHICLES, DETECTABLE WARNING SURFACES SHALL BE PLACED AT THE BOARDING EDGE OF THE PLATFORM.
13. AT BOARDING AND ALIGHTING AREAS AT SIDEWALK OR STREET LEVEL TRANSIT STOPS FOR RAIL VEHICLES, DETECTABLE WARNING SURFACES SHALL BE PLACED AT THE SIDE OF THE BOARDING AND ALIGHTING AREA FACING THE RAIL VEHICLES.

GENERAL CONCRETE STRUCTURE NOTES:

1. LL CONCRETE WORK SHALL BE IN ACCORDANCE WITH THE "AMERICAN CONCRETE INSTITUTE BUILDING CODE" (ACI 318) AND THE "SPECIFICATIONS FOR STRUCTURAL CONCRETE FOR BUILDINGS" (ACI 1301), LATEST EDITIONS.
2. ALL NORMAL WEIGHT CONCRETE (145 P.C.F.) SHALL OBTAIN A MINIMUM 28 DAY COMPRESSIVE STRENGTH OF 3000 PSI.
3. REINFORCING BARS SHALL BE DEFORMED BARS OF NEW BILLET STEEL CONFORMING TO ASTM SPECIFICATIONS A-615, GRADE 60. ALL REINFORCING AND ACCESSORIES SHALL BE DETAILED AND PLACED IN ACCORDANCE WITH ACI STANDARDS 315-80 AND 315R-80.
4. PLACE TWO (2) #5 BARS (EACH WAY) WITH A 24" PROJECTION AROUND ALL OPENINGS IN CONCRETE, UNLESS OTHERWISE SHOWN OR NOTED. REINFORCEMENT SHALL BE CONTINUOUS ACROSS JOINTS AND AROUND CORNERS OR SPLICE BARS SHALL BE PROVIDED IN ACCORDANCE WITH ACI STANDARDS 315-80 AND 315R-80. CORNER BARS SHALL BE PROVIDED AT ALL WALL CORNERS, EQUAL TO HORIZONTAL WALL REINFORCEMENT.
5. ALL REINFORCING SHALL BE BOUND TOGETHER BY 9 GAUGE TIES.
6. ALL IN-SITU MATERIAL SHALL BE PROOF ROLLED PRIOR TO CONSTRUCTION. SOFT OR YIELDING AREAS SHALL BE UNDERCUT TO A DEPTH OF, NOT LESS THAN, 24 INCHES AND EXTENDED BEYOND THE PROPOSED STRUCTURE BY 12 INCHES. FILL MATERIAL SHALL BE ENGINEERED FILL AS DETAILED IN THE GEOTECHNICAL REPORT.
7. NO HORIZONTAL CONSTRUCTION OR EXPANSION JOINTS SHALL BE ALLOWED, OTHER THAN THE CONSTRUCTION JOINT NOTED ON THE DETAILS. VERTICAL CONSTRUCTION OR EXPANSION JOINTS SHALL BE SPACED AS DETAILED, UNLESS OTHERWISE DIRECTED BY THE ENGINEER.

TYPICAL CAP STONE SECTION DETAIL

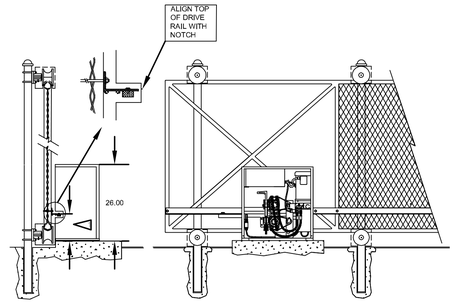
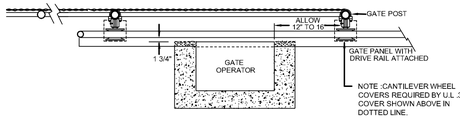
FENCE: CHAIN LINK GATE

MDOT
WORKING NUMBER CLG-1
SHEET NUMBER 6191

ISSUE DATE: AUGUST 01, 2017



NOTES:

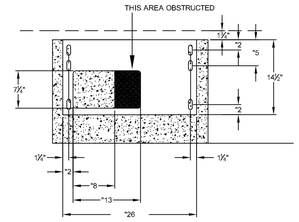


DRIVE RAIL HEIGHT IS MARKED ON THE SIDE OF EACH CHASSIS.

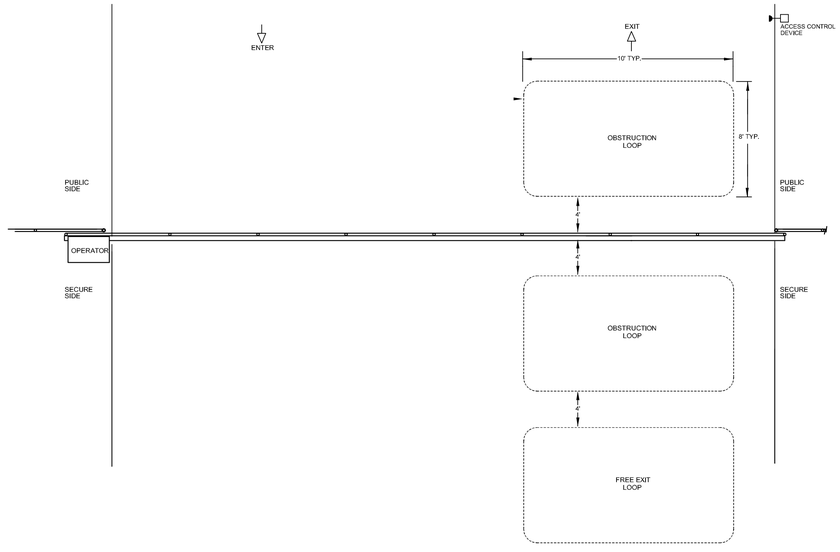
COVERS MUST BE USED FOR PROTECTION ON ALL EXPOSED WHEELS AND/OR HARDWARE. COVERS ARE SHOWN HERE AS DOTTED LINES.

IT MAY BE NECESSARY TO SHIM DRIVE RAIL IF GATE PANEL IS "BOWED". RAIL MUST BE INSTALLED IN A STRAIGHT LINE.

9⅛" APPROXIMATE RAIL HEIGHT FROM PAD. FINAL ADJUSTMENT TO BE MADE PER NOTCH ON CHASSIS.



NOTE:



MINIMUM CONC SLAB DIMENSIONS RECOMMENDED ARE: 30"WIDE, 20" FROM FRONT TO BACK AND 16" DEEP.

OPERATOR IS INSTALLED ON A CONC.PAD AND CONNECTED EXISTING CANTILEVER GATE PANEL.

INLET & JUNCTION BOX NOTES:

1. THE FLOW LINE ELEVATIONS SHOWN IN THESE TABLES ARE PIPE ELEVATIONS. THE CONTRACTOR SHALL MAKE WHATEVER ADJUSTMENTS AND CALCULATIONS NECESSARY TO CONSTRUCT THE STRUCTURES TO THE PROPER INVERT ELEVATIONS. ALL INVERTS SHALL BE GROUTED TO INSURE PROPER FLOW AND PREVENT SEDIMENT AND DEBRIS ACCUMULATION.
2. ALL CONCRETE INLETS SHALL HAVE CAST-IN-PLACE TOPS. INLET TOPS & GRATES SHALL BE FORMED AND SET TO MATCH FINISHED GRADES SHOWN ON THE GRADING PLANS. ABSOLUTELY NO PRECAST INLET TOP SECTIONS SHALL BE ALLOWED ON THIS PROJECT.
3. CUT SHEETS FOR ALL DRAINAGE STRUCTURES SHALL BE SUBMITTED FOR APPROVAL PRIOR TO CONSTRUCTION. CUT SHEETS SHALL SHOWN THE TOP GRADES OF THE STRUCTURE AS WELL AS THE SURROUNDING AREA OF THE STRUCTURE.

CLEAN OUT NOTE:

THE FLOW LINE ELEVATIONS SHOWN IN THIS TABLE ARE PIPE ELEVATIONS. THE ITEM "CLEAN OUT" IN THIS TABLE SHALL INCLUDE, BUT NOT BE LIMITED TO, ALL FITTINGS REQUIRED TO MAKE THE APPROPRIATE CONNECTIONS SUCH AS THE CLEAN OUT, BENDS, TEE, REDUCERS, ETC.

PIPE NOTES:

1. ALL DRAINAGE PIPE SHALL BE INSTALLED AS PER THE DETAILS IN THESE PLANS AND AS PER MANUFACTURERS SPECIFICATIONS.
2. ALL PLASTIC PIPE (PVC, CPP, HDPE, ETC.) SHALL BE PROPERLY BEDDED AND ANCHORED PER MANUFACTURERS SPECIFICATION. NO EXCEPTIONS.
3. NO PIPE, REGARDLESS OF SIZE AND MATERIAL, SHALL BE PLACED ON A GRADE LESS THAN 0.50%

CLASS B

CLASS C

CLASS C MODIFIED

d = 1" FOR ½" DEEP CORRUGATION
d = 2" FOR 1" DEEP CORRUGATION

MAXIMUM HEIGHT OF FILL OVER REINFORCED CONCRETE PIPE

CLASS OF PIPE	MAXIMUM COVER (ft) — CLASS "C" BEDDING	CLASS "B" BEDDING
III	12'	19'
IV	18'	38'
SPECIAL DESIGN	>28'	>48'

NOTE: CLASS OF PIPE AND BEDDING TO BE CONSISTENT THROUGHOUT THE PIPE LENGTH.

GENERAL NOTES:

1. MINIMUM SPACING BETWEEN MULTIPLE LINES OF PARALLEL PIPE SHALL BE THE DISTANCE REQUIRED FOR INSTALLING THE ADJACENT FLARED END SECTIONS OR AS SHOWN ON THE HEADWALL DRAWINGS FOR CONDUITS REQUIRING HEADWALLS.
2. UNLESS OTHERWISE INDICATED, THE TOP OF THE PIPE SHALL BE BELOW THE TOP OF THE SUBGRADE, AND A MINIMUM OF 12" OF COVER OVER THE TOP OF THE PIPE SHALL BE MAINTAINED BETWEEN THE SHOULDER LINES.
3. WHERE PRE-BED PIPE IS INSTALLED, FLARED END SECTIONS FROM OTHER MANUFACTURERS MAY BE JOINED TO PRE-BED PIPE PROVIDED A CONCRETE COLLAR IS PLACED AT THE CONTRACTOR'S EXPENSE AND A DEFORMATION TO THE PIPE'S FLOWLINE IS NOT EVIDENT ON FINAL PLACEMENT.
4. THE BACKFILL SHALL BE EITHER CLASS "B", CLASS "C", OR CLASS "C" MODIFIED. A MINIMUM COMPACTION LEVEL OF 95% STANDARD PROCTOR DENSITY PER AASHTO T99 SHALL BE ACHIEVED BY USE OF VIBRATORY PLATE, HYDROHAMMER TYPE COMPACTORS SHALL NOT BE USED OVER THE PIPE. ALL COMPACTION EQUIPMENT USED SHALL BE APPROVED BY THE ENGINEER.

NOTES:
1. A 24" DIAMETER PIPE IS THE MAXIMUM SIZE THAT MAY BE STUBBED INTO A 54" DIAMETER PIPE.
2. A 60" DIAMETER PIPE IS THE MINIMUM SIZE THAT A 30" DIAMETER PIPE MAY BE STUBBED INTO.

ELEVATION SHOWING PIPE CULVERT STUBBED INTO CONCRETE PIPE CULVERT

NOTE: TYPICAL INSTALLATION FOR MEDIAN STUB TO CROSSING DRAIN WITH MINIMUM COVER.

TYPICAL PLAN OF BRANCH CONNECTION TO BOX CULVERT WING–WALL

GENERAL NOTES:
1. PAYMENT FOR WORK AND MATERIALS FOR STUBBING A PIPE CULVERT INTO A BOX CULVERT OR CONCRETE PIPE SHALL BE PAID FOR AS A BRANCH CONNECTION OF THE APPROPRIATE SIZE, TYPE AND DESCRIPTION.
2. THE TABLE ON THIS SHEET INDICATES THE NUMBER AND LENGTHS OF ADDITIONAL REINFORCING STEEL BARS REQUIRED FOR BOX CULVERTS CONSTRUCTED. FOR A DOUBLE ROW OF REINFORCEMENT, DOUBLE THE NUMBER OF BARS SHOWN. THE ADDITIONAL REINFORCING STEEL SHALL BE INCLUDED IN THE COST FOR THIS TYPE OF BRANCH CONNECTION. THE QUANTITIES SHOWN IN THE TABLE ARE FOR THE MOST COMMON SIZES OF PIPE.
3. THE REINFORCEMENT OF THE INTERSECTED BOX OR PIPE SHALL BE CUT AS NECESSARY TO ACCOMMODATE THE STUBBED PIPE.
4. THE CONTRACTOR MAY INSERT THE INTERSECTING PIPE INTO THE FORM AT THE PROPER LOCATION IN LIEU OF FORMING BY BLOCKING OUT.

NOTES: 1. ONE (1) PIPE OPENING HAS BEEN DEDUCTED FROM THE STRUCTURE.
2. FOR EACH ADDITIONAL FOOT OF INLET HEIGHT, ADD 0.184 yd³ CLASS "B" CONCRETE AND 17 lbs REINFORCING STEEL.
3. 4 BARS "B" AND 2 BARS "C" REQUIRED PER EACH ADDITIONAL FOOT OF INLET HEIGHT.
4. WEIGHT OF FRAME CASTING = 244 lbs.
   WEIGHT OF GRATE = SEE SHEET IG-2.

GENERAL NOTES:

1. QUANTITIES SHOWN WILL BE THE BASIS OF PAYMENT UNLESS AUTHORIZED MODIFICATIONS ARE MADE.
2. CONCRETE SHALL BE CLASS "B" CONCRETE AND REINFORCING STEEL SHALL BE DEFORMED BARS.
3. THE CONTRACTOR HAS THE OPTION TO PROVIDE GRATE NO. 1 OR GRATE NO. 2 AS SHOWN ON SHEET IG-2.
4. FRAME TO BE GRAY IRON CASTING, (AASHTO M 105, CLASS 30).

END ELEVATION

TOE WALL REQUIRED ON ALL FLARED END SECTIONS. TO BE PAID FOR AS CLASS "B" STRUCTURAL CONCRETE - MINOR STRUCTURES.

GENERAL NOTES:

1. REINFORCEMENT SHALL CONFORM TO THE REQUIREMENTS OF REINFORCED CONCRETE PIPE OF LIKE DIAMETER PER AASHTO M 170, TABLE 2, WALL B.
2. 2 - 1½" DIA. CAST HOLES REQUIRED AS SHOWN TO ACCOMMODATE 2 - 1" DIA. TIE BOLTS, USED IN TYING SECTION TO PIPE CULVERT.
3. LENGTH (L) OF A BELL-END OPTION MAY VARY BY A NOMINAL EXTENSION ON THE BELL END.
4. FLARED END SECTIONS SHOULD BE REGARDED AS OBSTACLES UNDER THE BELOW CONDITIONS AND AS SUCH SHOULD BE LOCATED OUTSIDE OF THE CLEAR ZONE:
   A. CROSS DRAINS WITH SINGLE ROUND PIPES OF DIAMETER GREATER THAN 36" OR EQUIVALENT FOR ARCH PIPES.
   B. CROSS DRAINS WITH MULTIPLE ROUND PIPES OF DIAMETER GREATER THAN 30" OR EQUIVALENT FOR ARCH PIPES.
   C. PARALLEL SIDE DRAINS WITH SINGLE ROUND PIPES OF DIAMETER GREATER THAN 24" OR EQUIVALENT FOR ARCH PIPES.
5. ALL SIZES OF FLARED END SECTIONS FOR CIRCULAR CONCRETE PIPE MAY BE FURNISHED WITH EITHER BELL AND SPIGOT OR TONGUE AND GROOVE ENDS.

TYPE SS-3 INLET 3X5

GENERAL NOTES:

1. CONCRETE SHALL HAVE COMPRESSIVE STRENGTH OF 4000 PSI MINIMUM AT 28 DAYS.
2. REINFORCING FOR BOTTOM AND WALLS SHALL BE WELDED WIRE FABRIC, ASTM A-185, AND OF THE AREA AS SHOWN IN THE TABLE.
3. REINFORCING FOR COVER SHALL BE ASTM A615/A, AND OF THE SIZE AS SHOWN IN THE TABLE AND DRAWINGS.
4. JOINT TO BE SEALED WITH FLEXIBLE PLASTIC GASKET FOR JOINT CONDUIT, AASHTO SPECIFICATION M-198 OR MDOT SPECIFICATION.
5. 2½" LIFTING HOLES TO BE LOCATED ON EACH SIDE OF BOX SECTIONS FOR HANDLING.
6. GROUT FOR JOINING PIPE TO PRECAST UNITS WILL BE A COMMERCIAL MASONRY GROUT MEETING MDOT SPECIFICATIONS.
7. WHEN INTERIOR RISER UNITS ARE REQUIRED, UNITS SHALL BE MARKED TO IDENTIFY EACH UNIT.
8. CONCRETE & REINFORCING STEEL FOR PRECAST INLETS AND JUNCTION BOXES SHALL BE PAID FOR AS THE CALCULATED QUANTITY SHOWN ON THE RECAP SHEET FOR CAST-IN-PLACE INLETS & JUNCTION BOXES.

✱ NOTE: $yd^3/ft/ft$ = CUBIC YARD PER FOOT DEPTH OF MATERIAL PER FOOT LENGTH OF PIPE.

GENERAL NOTES:

1. QUANTITIES SHOWN WILL BE THE BASIS FOR PAYMENT UNLESS AUTHORIZED MODIFICATIONS ARE MADE.
2. TYPE I UNDERDRAIN IS GENERALLY USED WHEN UNDERDRAIN IS REQUIRED UNDER THE ROADWAY SUBGRADE.
3. TYPE II UNDERDRAIN IS USED AS REQUIRED OUTSIDE THE ROADWAY.
4. 6" OVERLAP SHALL BE REQUIRED AT THE END OF EACH ROLL OF TYPE III GEOTEXTILE. BOTH THE 6" AND 12" OVERLAP SHALL BE INCLUDED FOR PAYMENT UNDER GEOTEXTILE FOR SUBSURFACE DRAINAGE, TYPE III, PER SQUARE YARD.
5. GJ + K) SHALL BE 12" MINIMUM OR VARIABLE DEPTH UNLESS SPECIFIED ELSEWHERE ON THE PLANS.

STANDARD INSTALLATION DETAIL

TABLE 1: BEDDING AND BACKFILL REQUIREMENTS

BEDDING AND BACKFILL REQUIREMENTS FOR NON-RIGID PIPE IN CROSS DRAIN AND STORM DRAIN APPLICATIONS

A. BEDDING SHALL BE CLASS B IN ACCORDANCE WITH THE MISSISSIPPI STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION, LATEST EDITION.
B. BACKFILL MATERIAL SHALL BE ONE OF THE FOLLOWING:
   1. FLOWABLE FILL IN ACCORDANCE WITH THE MISSISSIPPI STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION LATEST EDITION.
   2. CRUSHED STONE AGGREGATE BACKFILL IN ACCORDANCE WITH THE MISSISSIPPI STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION, LATEST EDITION.

IF FLOWABLE FILL IS UTILIZED, CARE SHALL BE TAKEN TO PREVENT "FLOATING" OF THE PIPE.
THE COST OF FURNISHING AND PLACING THE REQUIRED BEDDING AND BACKFILL MATERIAL INDICATED IN A AND B SHALL BE INCLUDED IN THE UNIT COST OF THE NON-RIGID PIPE ALTERNATE, I.E., THERE IS NO SEPARATE PAY ITEM FOR NON-RIGID PIPE BEDDING AND BACKFILL MATERIAL.

BEDDING AND BACKFILL REQUIREMENTS FOR NON-RIGID PIPE IN SIDE DRAIN APPLICATIONS

A. BEDDING SHALL BE CLASS C IN ACCORDANCE WITH THE MISSISSIPPI SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION, LATEST EDITION.
B. BACKFILL MATERIAL SHALL BE IN ACCORDANCE WITH THE MISSISSIPPI SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION, LATEST EDITION. PIPES THAT SERVE AS A SIDE DRAIN ON DEPARTMENT RIGHT OF WAY, BUT CARRY DRAINAGE UNDER A COUNTY OR LOCAL ROAD SHALL ADHERE TO THE BEDDING AND BACKFILL REQUIREMENTS FOR A CROSS DRAIN CONTAINED ABOVE.

THE COST OF FURNISHING AND PLACING THE REQUIRED BEDDING AND BACKFILL MATERIAL INDICATED IN A AND B SHALL BE INCLUDED IN THE UNIT COST OF THE NON-RIGID ALTERNATE PIPE, I.E., THERE IS NO SEPARATE PAY ITEM FOR NON-RIGID BEDDING AND BACKFILL MATERIAL.

TABLE 2:
HIGH DENSITY CORRIGATED POLYETHYLENE PIPE
HEIGHT OF COVER

NOMINAL DIAMETER IN.	MINIMUM COVER IN.	MAXIMUM COVER - FT. CROSS DRAIN	MAXIMUM COVER - FT. SIDE DRAIN

42	2'-2"
48	2'-5"

TRENCH CROSS SECTION SHOWING TERMINOLOGY

GENERAL NOTES:

1. MATERIALS
   THERMOPLASTIC PIPE
   POLYETHYLENE PIPE SHALL CONFORM TO THE REQUIREMENTS OF AASHTO M 294, LATEST EDITION.
   DESIGNATION OF TYPE: TYPE S: THIS PIPE WILL HAVE A FULL CIRCULAR CROSS SECTION WITH AN OUTER CORRUGATED PIPE WALL AND A SMOOTH INNER LINER.
   BEDDING MATERIAL AND STRUCTURAL BACKFILL
   BEDDING MATERIAL AND STRUCTURAL BACKFILL SHALL MEET THE REQUIREMENTS OF TABLE 1.
2. JOINTS
   JOINTS FOR THERMOPLASTIC PIPE SHALL MEET THE PERFORMANCE REQUIREMENTS OF SOIL TIGHTNESS UNLESS WATERTIGHTNESS IS SPECIFIED.
   SUITABLE JOINTS CAN BE OBTAINED WITH THE FOLLOWING TYPES OF CONNECTIONS:
   A) CORRUGATED BANDS (WITH OR WITHOUT GASKETS)
   B) BELL AND SPIGOT PIPE ENDS (WITH OF WITHOUT GASKETS)
   C) DOUBLE BELL COUPLINGS (WITH OR WITHOUT GASKETS)
3. INSTALLATION
   MINIMUM TRENCH WIDTHS SHALL MEET THE REQUIREMENTS OF TABLE 3.
   THE MIDDLE THIRD OF THE BEDDING MATERIAL UNDER THE PIPE SHOULD BE LOOSELY PLACED, WHILE THE REMAINDER SHALL BE COMPACTED TO A MINIMUM 98% OF MAXIMUM DENSITY PER AASHTO T 99.
   A MINIMUM OF 4 INCHES OF BEDDING SHALL BE PROVIDED PRIOR TO PLACEMENT OF THE PIPE.
   STRUCTURAL BACKFILL SHALL BE PLACED AND COMPACTED IN LAYERS NOT EXCEEDING AN 8" LOOSE LIFT THICKNESS AND BROUGHT UP EVENLY ON BOTH SIDES OF THE PIPE WITH AN ELEVATION NOT LESS THAN 12 INCHES ABOVE THE TOP OF THE PIPE. A MINIMUM COMPACTION LEVEL OF 98% STANDARD DENSITY PER AASHTO T 99 SHALL BE ACHIEVED.
   MINIMUM COVER REQUIREMENTS SHALL MEET THE REQUIREMENTS OF TABLE 2.
   FOR MULTIPLE INSTALLATIONS OF POLYETHYLENE PIPES, A CLEAR DISTANCE BETWEEN THE PIPES SHALL MEET THE REQUIREMENTS OF TABLE 4.
4. CALCULATIONS FOR FILL DEPTHS ARE BASED ON PROPERTIES DEFINED IN AASHTO M294 AND CALCULATIONS IN AASHTO SEC.19.

TEMPORARY VEGETATION SCHEDULE

	EROSION CONTROL ITEMS		SEASONAL APPLICATIONS - DATES & RATES				REQUIREMENTS
			SPRING & SUMMER		FALL & WINTER		
	PAY ITEM NO.	ITEMS	RATES	DATES	RATES	DATES	
(7)	211–B001	TOPSOIL FOR SLOPE TREATMENT (LVM)	4" THICK	MARCH 1 TO SEPTEMBER 1	4" THICK	SEPTEMBER 1 TO MARCH 1	TOPSOIL REQUIRED ON SLOPES DETERMINED BY THE ENGINEER DURING CONSTRUCTION
	212–B001	STANDARD GROUND PREPARATION	PER SQ. FT.	MARCH 1 TO SEPTEMBER 1	PER SQ. FT.	SEPTEMBER 1 TO MARCH 1	GROUND PREPARATION REQUIRED ON AREAS TO RECEIVE SOLID SODDING OR SEEDING, AS APPLICABLE
	907–213–A001	AGRICULTURAL LIMESTONE	3 TONS / ACRE	MARCH 1 TO SEPTEMBER 1	3 TONS / ACRE	SEPTEMBER 1 TO MARCH 1	LIMESTONE SHALL BE MECHANICALLY SPREAD UNIFORMLY AND INCORPORATED INTO THE SOIL PRIOR TO PLANTING
	213–B001	COMBINATION FERTILIZER (13–13–13)	1000 LBS / ACRE	MARCH 1 TO SEPTEMBER 1	1000 LBS / ACRE	SEPTEMBER 1 TO MARCH 1	FERTILIZER SHALL BE MECHANICALLY SPREAD UNIFORMLY AND INCORPORATED INTO THE SOIL PRIOR TO PLANTING
(1)	213–C001	SUPER PHOSPHATE	0.5 TON / ACRE (EST)	MARCH 1 TO SEPTEMBER 1			SUPER PHOSPHATE (FOR BID ITEM PURPOSES)
(2)	214–A002	SEEDING (BERMUDA GRASS)	20 LBS / ACRE	MARCH 1 TO SEPTEMBER 1	20 LBS / ACRE	SEPTEMBER 1 TO MARCH 1	SEED REQUIRED ON DISTURBED AREAS. UNHULLED SEED MAY BE REQUIRED DURING THE DORMANT SEASON AS DIRECTED
(3)(5)	214–A003	SEEDING (TALL FESCUE)			15 LBS / ACRE	AUGUST 15 TO MARCH 15	SEED REQUIRED IN DISTURBED AREAS
(3)(5)	214–A004	SEEDING (CRIMSON CLOVER)			20 LBS / ACRE	AUGUST 15 TO MARCH 15	SEED REQUIRED ON DISTURBED AREA
(6)	215–A001	VEGETATIVE MATERIAL FOR MULCH	2 TONS / ACRE (EST)	MARCH 1 TO SEPTEMBER 1	2 TONS / ACRE (EST)	SEPTEMBER 1 TO MARCH 1	THE ENGINEER WILL DESIGNATE THE RATES OF APPLICABLE (SEE SUBSECTION 215–03.3)
	216–A001	SOLID SODDING	PER SQ. YD.	MARCH 1 TO SEPTEMBER 1	PER SQ. YD.	SEPTEMBER 1 TO MARCH 1	SOLID SOD REQUIRED ON AREAS SPECIFIED IN THE CONTRACT OR BY THE ENGINEER
	219–A001	WATERING	20 GAL / S.Y. (EST)	MARCH 1 TO SEPTEMBER 1	20 GAL. / S.Y. (EST)	SEPTEMBER 1 TO MARCH 1	TO BE USED AS DIRECTED IN THE PLANTING AND ESTABLISHING OF SOLID SOD
(4)	220–A001	INSECT PEST CONTROL	PER ACRE		PER ACRE		SEE SECTION 220
	TEMPORARY EROSION CONTROL ITEMS						
	212–A001	LIGHT GROUND PREPARATION	PER SQ. YD.		PER SQ. YD.		APPROXIMATELY HALF SQ.YD. STANDARD GROUND PREPARATION
	213–B001	COMBINATION FERTILIZER (13–13–13)	0.25 TONS/ ACRE		0.25 TONS/ ACRE		QUANTITY BASED ON LIGHT GROUND PREPARATION
	214–A013	SEEDING (BROWN TOP MILLET)	20 LBS / ACRE	APRIL 1 TO AUGUST 31			QUANTITY BASED ON LIGHT GROUND PREPARATION
	214–A017	SEEDING (RYE GRASS)			25 LBS / ACRE	SEPTEMBER 1 TO MARCH 31	QUANTITY BASED ON LIGHT GROUND PREPARATION
	214–A015	SEEDING (OATS)			90 LBS / ACRE	SEPTEMBER 1 TO DECEMBER 15	QUANTITY BASED ON LIGHT GROUND PREPARATION
	215–A001	VEGETATIVE MATERIAL FOR MULCH	1 TON / ACRE (EST)		1 TON / ACRE (EST)		QUANTITY BASED ON LIGHT GROUND PREPARATION

(1) ALL AREAS THAT HAVE BEEN VEGETATED, UNDER THIS CONTRACT, FOR AT LEAST (60) SIXTY DAYS, SHALL RECEIVE ADDITIONAL APPLICATION(S) OF FERTILIZER(S) OF THE TYPE(S) AND RATE(S) OF APPLICATIONS AS DETERMINED BY SOIL TEST OR AS DIRECTED DURING THE GROWING SEASONS THE CONTRACT IS IN FORCE. GROUND PREPARATION WILL NOT BE REQUIRED FOR THE ADDITIONAL APPLICATIONS.

(2) PROPOSAL QUANTITIES ESTIMATED ON THE BASIS THAT 100% OF THE ACREAGE WILL BE SEEDED.

(3) PROPOSAL QUANTITIES ESTIMATED ON THE BASIS THAT 50% OF THE ACREAGE WILL BE SEEDED.

(4) QUANTITY ESTIMATED ON THE BASIS THAT 50% OF THE ACREAGE VEGETATED MAY REQUIRED TREATMENT.

(5) THIS ITEM MAY BE OMITTED ON AREAS SELECTED BY THE ENGINEER.

(6) BAHAIA GRASS WILL NOT BE PERMITTED AS A MULCH MATERIAL.

(7) PROPOSAL QUANTITIES ESTIMATED ON THE BASIS THAT 75% OF THE ACREAGE SEEDED MAY REQUIRE TOPSOIL

SPECIAL GENERAL NOTE:

ALL REFERENCE TO PAY ITEM NUMBERS SHALL BE USED FOR REFERENCE TO THE SPECIFICATION ONLY. PAY FOR ITEMS SHOWN ON THIS SHALL BE AS NOTED IN THE BID PROPOSAL.

STATE	PROJECT NO.
MISS.	

GENERAL NOTES:

1. "J-HOOK" CONFIGURATION SILT FENCE APPLICATIONS SHOULD BE USED IN CONJUNCTION WITH PERIMETER SILT FENCE WHEN STORMWATER RUNOFF IS IN TWO DIRECTIONS (DOWN A FILL SLOPE AND DOWN GRADIENT ALONG THE RIGHT-OF-WAY).
2. "SMILE CONFIGURATION" APPLICATIONS SHOULD BE USED AS PERIMETER SILT FENCE WHEN THERE IS ONE-DIRECTIONAL FLOW DOWN A SLOPE.
3. SAND BAGS CAN BE USED AS DIVERSION BERMS TO PREVENT SEDIMENT FROM BEING WASHED ONTO OR ACROSS HARD SURFACES, OR TO HELP SLOW SHEET FLOW VELOCITY WHEN DRAINING AWAY FROM HARD SURFACES.
4. FOR SHORTER SLOPES AND/OR SLOPES THAT ARE LESS STEEP, DIVERSION BERMS CAN BE USED TO SAFELY CONVEY STORMWATER AWAY FROM OR AROUND A DENUDED AREA. THEY CAN BE CONSTRUCTED USING MANUFACTURED SILT DIKE OR BY CONSTRUCTING A TEMPORARY EARTH BERM AND TRENCH WITH GEOTEXTILE OR POLYETHYLENE SHEETING PROTECTION.
5. TEMPORARY DEWATERING STRUCTURES CAN BE USED DURING CULVERT CONSTRUCTION, STREAM DIVERSIONS, OR OTHER CONSTRUCTION ACTIVITIES WHERE TURBID WATERS NEED TO BE CLARIFIED BEFORE RELEASE.
6. THE ABUTMENT SLOPE TOE BERM SHALL BE 3 FT. TALL. THE BERM MAY BE CONSTRUCTED WITH ROCK IN ACCORDANCE WITH REQUIREMENTS FOR ROCK DITCH CHECKS ON WK. NO. ECD-8 OR WITH SOIL IN ACCORDANCE WITH WK. NO. BAS-A. IF BERM IS USED, IT MUST BE GRASSED.

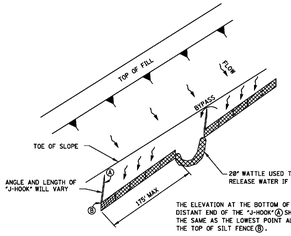
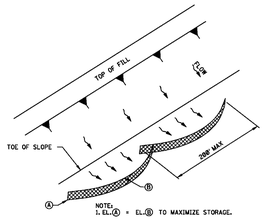
SEDIMENT BARRIER AT CROSS DRAIN

FRONT ELEVATION



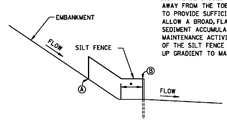
SIDE ELEVATION

TEMPORARY BRUSH BARRIER



NOTES:
1. BRUSH BARRIER MAY BE USED WHERE NATURAL GROUND IS LEVEL OR SLOPING AWAY FROM PROJECT.
2. PLACE BRUSH, LOG AND TREE LAPS APPROXIMATELY PARALLEL TO TOE OF FILL SLOPE WITH SOME OF THE HEAVIER MATERIALS BEING PLACED ON TO TO PROPERLY SECURE THE BARRIER AS DETAILED AT LOCATIONS SHOWN ON PLANS OR AS DIRECTED OR PERMITTED BY THE ENGINEER.
3. TO ALLOW WATER TO SEEP THROUGH BRUSH BARRIER, INTERMINGLE THE BRUSH, LOG AND TREE LAPS SO AS NOT TO FORM A SOLID DAM.
4. THE BRUSH BARRIER MAY BE CHOKED WITH FILTER FABRIC. THE COST OF FABRIC TO BE INCLUDED IN OTHER ITEMS BID.
5. TEMPORARY BRUSH BARRIER WILL NOT BE MEASURED FOR SEPARATE PAYMENT.

NOTE: ANCHOR AND INSTALL SILT FENCE PER DETAILS SHOWN ON WK. NO. ECD-3



THE ELEVATION AT THE BOTTOM OF THE DISTANT END OF THE "J-HOOK" (A) SHOULD BE THE SAME AS THE LOWEST POINT ALONG THE TOP OF SILT FENCE (B).

"J-HOOK" SILT FENCE APPLICATION

NOTE:
1. EL. (A) = EL. (B) TO MAXIMIZE STORAGE.

"SMILE-CONFIGURATION" SILT FENCE APPLICATION

SILT FENCE SECTION AT TOE OF FILL

- SILT FENCE SHOULD BE LOCATED AWAY FROM THE TOE OF THE SLOPE TO PROVIDE SUFFICIENT SPACE TO ALLOW A BROAD, FLAT AREA FOR SEDIMENT ACCUMULATION AND MAINTENANCE ACTIVITIES. THE ENDS OF THE SILT FENCE SHOULD BE TURNED UP GRADIENT TO MAXIMIZE STORAGE.

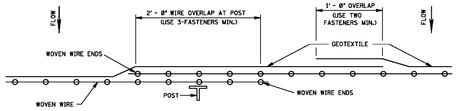
ELEVATION VIEW



METHOD I

METHOD II
MECHANICAL INSTALLATION

SIDE VIEW

GENERAL NOTES:

1. SILT FENCES SHOULD BE USED IN AREAS WHERE FLOW IS NOT SEVERE.
2. SILT FENCES ARE TEMPORARY SEDIMENT CONTROL ITEMS THAT SHOULD BE ERECTED OPPOSITE ERODIBLE AREAS SUCH AS NEWLY GRADED FILL SLOPES AND ADJACENT TO STEAMS AND CHANNELS.
3. SILT FENCE SHOULD BE PLACED WELL INSIDE RIGHT-OF-WAY AND ALONG EDGE OF CLEARING LIMITS. THIS WILL ALLOW ROOM FOR BACK-UP FENCE IF FIRST FENCE BECOMES FULL.
4. WHENEVER POSSIBLE SILT FENCE SHOULD BE CONSTRUCTED ACROSS A LEVEL AREA IN THE SHAPE OF A SMILE. THIS AIDS IN PONDING OF RUNOFF AN FACILITATES SEDIMENTATION.
5. THE CONTRACTOR MAY ELECT TO USE EITHER METHOD I OR METHOD II. COST TO BE LINEAR FEET OF SILT FENCE.
6. METHOD II INSTALLATION SHALL BE ACCOMPLISHED USING AN IMPLEMENT THAT IS MANUFACTURED FOR THE APPLICATION AND PROVIDES A CONFIGURATION MEETING THE REQUIREMENTS OF DETAIL.
7. WIRE SHALL BE A MINIMUM OF 32" IN WIDTH AND SHALL HAVE A MINIMUM OF 6 LINE WIRES WITH 12" STAY SPACING.
8. GEOTEXTILE FABRIC MEETING THE TYPE II MATERIAL REQUIREMENTS AND INSTALLED ACCORDING TO SPECIFICATION MAY BE USED WITHOUT WIRE FENCE.

DITCH CHECK HEIGHT (FT.)

EXAMPLE: HEIGHT OF STRUCTURE 1.5'
GRADE IS
EXTEND VERTICALLY FROM 1.5' HEIGHT TO INTERSECT S = 1.0% GRADE
EXTEND 90° TO THE LEFT TO DETERMINE SPACING (150')

DITCH CHECK SPACING

GENERAL NOTES:

1. THE DITCH CHECK PERSPECTIVE ILLUSTRATES A TOOL BOX OF TEMPORARY PRACTICES THAT MAY BE USED. DITCH CHECKS ARE INSTALLED TO CONTROL RUNOFF VELOCITY AND THUS REDUCE EROSION AND PROVIDE FOR TRAPPING OF SEDIMENTS.
2. SELECTION OF THE APPROPRIATE DITCH CHECK SHOULD BE A FUNCTION OF CONSTRUCTION PHASE, DRAINAGE AREA, DITCH GRADIENT, SOIL TYPE, ECONOMY AND SAFETY.
3. DITCH CHECKS CAN BE REMOVED FOR MAINTENANCE AND/OR REPLACEMENT BUT MUST REMAIN IN PLACE UNTIL UPSLOPE AREAS HAVE BEEN PERMANENTLY STABILIZED. MAINTENANCE INCLUDES REMOVAL OF SEDIMENT BEGINNING WHEN SEDIMENT ACCUMULATION REACHES ½ THE CAPACITY OR HEIGHT OF THE STRUCTURE AND NEVER ALLOWING FOR SEDIMENT TO ACCUMULATE MORE THAN ½ THE VOLUME OR HEIGHT OF THE DITCH CHECK STRUCTURE.
4. HAY BALES SHOULD BE USED TO INTERCEPT LOW VOLUME FLOWS IN LOW TO MODERATE GRADIENT DITCHES.
5. SILT FENCE DITCH CHECKS SHOULD BE USED WHERE IT HAS BEEN DETERMINED THAT HAY BALE CHECKS ARE INADEQUATE. SILT FENCE DITCH CHECKS SHOULD BE USED TO INTERCEPT LOW VOLUME FLOWS IN LOW TO MODERATE GRADIENT DITCHES.
6. SANDBAG DITCH CHECKS SHOULD BE USED FOR VELOCITY REDUCTION AND MINIMAL SEDIMENT TRAPPING IN CONCRETE PAVED DITCHES OR IN DITCHES THAT HAVE ROCK BOTTOMS.
7. WATTLE DITCH CHECKS CAN BE USED FOR VELOCITY REDUCTION AND CONTROL OF SEDIMENT TRANSPORT UNDER LOW TO MEDIUM FLOW CONDITIONS.
8. SILT DIKES CAN BE USED IN DITCHES WITH CONCENTRATED FLOWS WITHIN THE CLEAR ZONE WHERE RIPRAP CAN NOT BE USED. AS CONSTRUCTION PROGRESSES.
9. ROCK DITCH CHECKS WITH SUMP EXCAVATION CAN BE PLACED IN DITCHES TO ASSURE ON-SITE SEDIMENT TRAPPING REQUIREMENTS ARE MET. DITCH CHECK WITH SUMP EXCAVATION IS USED WHEN DITCHES RECEIVE DRAINAGE FROM CUT OR FILL SLOPES OR OTHER CRITICAL AREAS WHERE SOIL EROSION IS EXPECTED. DRAINAGE AREA FOR A TEMPORARY SEDIMENT TRAP SHOULD BE LIMITED TO 3 ACRES. THEY CAN BE USED IN SERIES TO INCREASE ON-SITE SEDIMENT TRAPPING EFFICIENCY.
10. DITCH CHECKS, IN NO CASE, SHALL BE PLACED IN LIVE STREAMS.
11. CONFIGURATION AND SPACING MAY BE ADJUSTED IF APPROVED BY THE ENGINEER TO ACCOMMODATE TRAVELWAY SAFETY, WATER FLOW, OR SOIL AND INSTALLATION CHALLENGES.

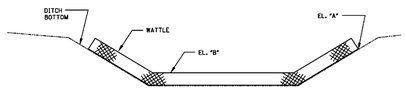
DETAIL (DITCH CHECK)



SECTION A–A

NOTES:

1. WATTLE DITCH CHECKS CAN BE USED FOR VELOCITY REDUCTION AND CONTROL OF SEDIMENT TRANSPORT UNDER LOW TO MEDIUM FLOW CONDITIONS.
2. THE PLACEMENT INTERVAL BETWEEN WATTLE DITCH CHECK SHALL BE 100' UNLESS SHOWN OTHERWISE ON THE PLANS OR EROSION CONTROL PLAN APPROVED BY THE ENGINEER. SEE SPACING GUIDANCE ON WK. NO. ECD-4.
3. ANCHORING WOOD STAKES SHALL BE SIZED, SPACED, DRIVEN, AND BE OF A MATERIAL THAT EFFECTIVELY SECURES THE CHECK. STAKE SPACING SHALL BE A MAXIMUM OF THREE FEET. ALL NON-DEGRADABLE MATERIALS SHALL BE REMOVED WHEN NO LONGER NEEDED.
4. TRENCHING OF WATTLES MAY BE NECESSARY IF PIPING BECOMES EVIDENT.
5. WATTLES SHOULD NOT BE USED IN HARD BOTTOM CHANNELS.
6. IN THE EVENT WATTLES CANNOT BE SECURED IN PLACE USING WOOD STAKES, SAND BAGS MAY BE USED IN LIEU OF WOOD STAKES IN ORDER TO SECURE THE WATTLES IN PLACE. IF SANDS BAGS ARE USED IN THIS APPLICATION THEY WILL NOT BE A SEPARATE PAY ITEM.

NOTE: END POINTS "A" SHALL BE HIGHER THAN FLOWLINE POINT "B".

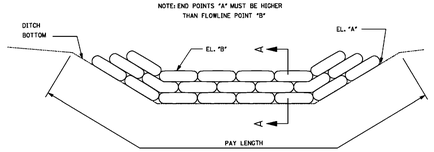
DETAIL (DITCH CHECK)



GENERAL NOTES:

1. SANDBAG DITCH CHECKS ARE USED FOR VELOCITY REDUCTION AND MINIMAL SEDIMENT TRAPPING IN CONCRETE PAVED DITCHES OR IN DITCHES WITH ROCKY BOTTOMS.
2. MINIMUM RECOMMENDED PLACEMENT INTERVAL BETWEEN SANDBAG DITCH CHECK IS 100' UNLESS SHOWN OTHERWISE ON THE PLANS OR APPROVED BY THE ENGINEER. SEE SPACING GUIDANCE ON WK. NO. ECD-4.
3. PREVENTING SEDIMENT FROM ENTERING A PAVED DITCH IS PREFERABLE TO CAPTURING SEDIMENT WITHIN PAVED DITCH.
4. ROCKBAGS MAY BE USED IN LIEU OF SANDBAGS, ONLY WHEN PAY ITEM FOR ROCKBAGS IS INCLUDED IN THE CONTRACT.

SECTION A–A

NOTE: SILT FENCE OR SANDBAGS MAY ALSO BE USED FOR THIS APPLICATION. HAY BALES NOT ACCEPTABLE DURING THIS STAGE.

CURB INLET PROTECTION (STAGE 2)
SINGLE OR DOUBLE WING INLET

SECTION B–B

DROP INLET PROTECTION

NOTES:

1. ANCHORING STAKES SHALL BE SIZED, SPACED, AND BE OF A MATERIAL THAT EFFECTIVELY SECURES THE WATTLE. STAKE SPACING SHALL BE A MAXIMUM OF THREE FEET.
2. OVERLAP ENDS OF WATTLES PER MANUFACTURER'S RECOMMENDATIONS (1' MIN., 3' MAX.)
3. TRENCHING OF WATTLES MAY BE NECESSARY IF PIPING BECOMES EVIDENT.
4. IN THE EVENT WATTLES CANNOT BE SECURED IN PLACE USING WOOD STAKES, SANDBAGS MAY BE USED IN LIEU OF WOOD STAKES IN ORDER TO SECURE WATTLES IN PLACE. COST OF SANDBAGS USED IN THIS APPLICATION SHALL BE INCLUDED IN OTHER ITEMS BID.

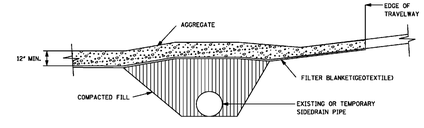
PLAN

GENERAL NOTES:



1. A STABILIZED CONSTRUCTION ENTRANCE SHALL BE CONSTRUCTED AT POINTS OF EGRESS FROM UNSTABILIZED AREAS OF THE PROJECT TO PUBLIC ROADS WHERE OFFSITE TRACKING OF MUD COULD OCCUR. TRAFFIC FROM UNSTABILIZED AREAS OF THE PROJECT SHALL BE DIRECTED THRU THE STABILIZED ENTRANCE. BARRIERS, FLAGGING, OR OTHER POSITIVE MEANS SHALL BE USED AS REQUIRED TO LIMIT AND DIRECT VEHICULAR EGRESS ACROSS THE STABILIZED ENTRANCE.
2. THE CONTRACTOR MAY PROPOSE AN ALTERNATIVE TECHNIQUE TO MINIMIZE OFFSITE TRACKING OF SEDIMENT. THE ALTERNATIVE MUST BE REVIEWED AND APPROVED BY THE ENGINEER PRIOR TO ITS USE.
3. ALL MATERIALS SPILLED, DROPPED, OR TRACKED ONTO PUBLIC ROADS (INCLUDING THE STABILIZED CONSTUCTION ENTRANCE AGGREGATE AND CONSTRUCTION MUD) SHOULD BE REMOVED DAILY, OR MORE FREQUENTLY IF SO DIRECTED BY THE ENGINEER.
4. SIZE III STABILIZER AGGREGATE OR LARGER SHALL BE USED.
5. THE STABILIZED CONSTRUCTION ENTRANCE SHALL BE MAINTAINED IN A CONDITION THAT WILL ALLOW IT TO PERFORM ITS FUNCTION TO PREVENT OFFSITE TRACKING. THE STABILIZED CONSTRUCTION ENTRANCE SHOULD BE RINSED WHEN NECESSARY TO MOVE ACCUMULATED MUD DOWNWARD THRU THE STONE. ADDITIONAL STABILIZATION OF THE VEHICULAR ROUTE LEADING TO THE STABILIZED ENTRANCE MAY BE REQUIRED TO LIMIT THE MUD TRACKED.
6. THE NOMINAL SIZE OF A STANDARD STABILIZED CONSTRUCTION ENTRANCE IS 15'X 50' UNLESS OTHERWISE SHOWN IN THE EROSION CONTROL PLAN.
7. COSTS OF ALL ITEMS ON THIS SHEET SHALL BE INCLUDED IN OTHER ITEMS BID.

STAGE 4

COMPLETED INLET WITH
ADJACENT IMPERMEABLE SURFACE

DITCH INLET CONSTRUCTION STAGES

NOTES:

1. DRAINAGE STRUCTURE BACKFILL SHOULD BE PLACED IN STAGE 1 IMMEDIATELY AFTER PIPE INSTALLATION. INLET CONSTRUCTION SHOULD COMMENCE AS SOON AS POSSIBLE AND BE CONTINUOUS THROUGH COMPLETION.
2. CONFIGURATIONS MAY BE ADJUSTED WITH APPROVAL OF THE ENGINEER FOR TRAVELWAY SAFETY, WATER FLOW, OR SOIL AND INSTALLATION CHALLENGES.
3. DURING STAGE 1 AND STAGE 2, SILT FENCE MAY BE REQUIRED UPSLOPE OF THE INLET EXCAVATION AS DIRECTED BY THE ENGINEER.
4. IF SILT FENCE IS INSTALLED AROUND THE INLET INSTALLATION IT SHOULD BE IN A CONFIGURATION THAT WILL ALLOW INLET CONSTRUCTION.
5. FOR INLET PROTECTION TO BE USED IN STAGES 1 AND 2 OF CONSTRUCTION, SEE WK. NO. ECD-12.

SECTION A–A

SANDBAG BARRIER

CURB AND GUTTER SEDIMENT CONTAINMENT SYSTEM

CURB INLET PROTECTION NOTES:

1. THIS CURB INLET PROTECTION METHOD CAN BE USED DURING ANY STAGE OF BASE AND PAVEMENT CONSTRUCTION.
2. BAG HEIGHT AND NUMBER OF BAGS SHOULD BE BASED ON CURB HEIGHT AND USE OF TRAVELWAY.
3. SEDIMENT SHOULD BE CONTROLLED PRIOR TO ENTERING GUTTER. GUTTER CHECKS AND INLET PROTECTION ARE FOR SECONDARY CONTROL.
4. REMOVE ACCUMULATED SEDIMENT AFTER EVERY RAINFALL. SWEEP SEDIMENT FROM HARD SURFACES AND DISPOSE OF APPROPRIATELY AWAY FROM INLETS AND/OR WATER BODIES.
5. IF DENUDED AREAS EXIST BEHIND THE INLET, A SEDIMENT BARRIER SHOULD BE INSTALLED AROUND ITS PERIMETER TO CONTOL SEDIMENT.

GENERAL NOTES

00 - PROCUREMENT AND CONTRACTING

0.1 REVIEW BY ALL PARTIES: CONTRACTOR SHALL ENSURE THAT ALL SUBCONTRACTORS AND SUPPLIERS REVIEW AND ABIDE BY THE TERMS OF THESE GENERAL NOTES FOR CONTRACT COMPLIANCE.

0.2 RELATIONSHIP TO CONSTRUCTION DOCUMENTS: GENERAL NOTES ARE MEANT TO COMPLIMENT AND/OR EMPHASIZE INFORMATION PRESENTED IN THE CONTRACT DOCUMENTS. THE CONTRACTOR SHALL NOTIFY THE ARCHITECT WHERE A CONFLICT ARISES BETWEEN THE FOLLOWING GENERAL NOTES AND REMAINING CONTRACT DOCUMENTS DURING BIDDING AND FOR THE DURATION OF THE PROJECT. IF A CONFLICT ARISES DURING BIDDING THAT CANNOT BE LEGALLY CLARIFIED BY THE ARCHITECT, THE CONTRACTOR SHALL BASE THE BID ON THE MOST EXPENSIVE COMBINATION OF QUALITY AND QUANTITY OF WORK INDICATED.

0.3 KEYED NOTES: WHERE PROVIDED, NUMBERED NOTES ARE KEYED ON THE DRAWINGS TO DEMONSTRATE AN EXAMPLE OF A PARTICULAR CONDITION AT THE TIME OF DRAWING PREPARATION AND ARE NOT INCLUSIVE OF ALL INSTANCES OF THAT CONDITION, AND THUS MAY ALSO APPLY AS GENERAL NOTES FOR SITUATIONS OF THE SAME CONDITION.

01 - GENERAL REQUIREMENTS

1.1. FIELD CONDITIONS DURING BIDDING: CONTRACTOR SHALL PAY VERY CLOSE ATTENTION TO FIELD CONDITIONS DURING BIDDING TO ENSURE THAT ALL CONDITIONS ARE ACCOUNTED FOR AT THAT TIME. KNOWN OMISSIONS AND ERRORS BY THE A CONTRACTOR OR A SUBCONTRACTOR SHALL BE BROUGHT TO THE ARCHITECT'S ATTENTION FOR CLARIFICATION PRIOR TO BIDDING.

1.2. PUBLIC SAFETY: THE CONTRACTOR SHALL COORDINATE WITH THE JURISDICTION HAVING AUTHORITY TO ENSURE PUBLIC SAFETY AROUND THE CONSTRUCTION LIMITS AT ALL TIMES.

1.3. CONTRACTOR/SUBCONTRACTOR COORDINATION: ALL SUBCONTRACTORS (INCLUDING BUT NOT LIMITED TO HVAC, PLUMBING, FIRE SPRINKLER, AND ELECTRICAL) SHALL BE BOUND TO THE DESIGN AS INDICATED ON ARCHITECTURAL DRAWINGS, ENGINEERING DRAWINGS, SUPPLEMENTAL INSTRUCTIONS AND SHOP DRAWINGS. WHERE A CONFLICT ARISES BETWEEN THE THOSE DOCUMENTS, THE SUBCONTRACTOR SHALL COORDINATE WITH THE GENERAL CONTRACTOR PRIOR TO EXECUTION OF WORK TO DETERMINE A SOLUTION AND THE GENERAL CONTRACTOR SHALL INVOLVE THE ARCHITECT AS NECESSARY.

1.4. COORDINATION W/ OWNER'S CONTRACTORS: CONTRACTOR IS RESPONSIBLE FOR COORDINATING OWNER SUPPLIED CONTRACTORS (SECURITY EQUIPMENT, TELEPHONE EQUIP., FURNITURE, ETC.) SO THAT CONFLICTS DO NOT OCCUR BETWEEN TRADES AND SCHEDULING.

1.5. ADA: ALL PHYSICAL PROPERTIES OF THE BUILDING WITHIN THE CONTRACT LIMITS MUST COMPLY WITH THE 2010 ADA STANDARDS FOR ACCESSIBLE DESIGN.

1.6. MOCK-UPS FOR APPROVAL: THE CONTRACTOR SHALL PROVIDE MOCK-UPS AS DIRECTED IN THE DRAWINGS AND SPECIFICATIONS FOR REVIEW BY THE OWNER, ARCHITECT, AND APPLICABLE ENGINEERS AND CONSULTANTS, IN A SINGLE PRESENTATION. WHEN POSSIBLE, MEASURES TO CORRECT UNAPPROVED SAMPLES SHALL BE COMPLETED IMMEDIATELY TO AVOID AN ADDITIONAL ON-SITE INSPECTION BY THE GROUP. THE CONTRACTOR SHALL INCUR ANY ADDITIONAL COSTS ARISING OUT OF THE NECESSITY OF RESCHEDULING AN ADDITIONAL REVIEW BY SAID GROUP AS A RESULT OF THE CONTRACTOR'S FAILURE TO PROVIDE THE REQUESTED SAMPLES AS DIRECTED. AMPLE NOTICE (NO LESS THAN 5 CALENDAR DAYS) SHALL BE GIVEN TO THE ARCHITECT THAT THE SAMPLES ARE READY TO BE REVIEWED. IN SOME CASE, APPROVED MOCK-UPS CAN REMAIN PART OF THE WORK. SEE SPECIFICATIONS FOR ADDITIONAL SAMPLE AND MOCK-UP REQUIREMENTS.

1.7. DIMENSIONS: CONTRACTOR TO VERIFY ALL DIMENSIONS.

1.8. ANGLES: ALL ANGLES ARE 45 AND 90 DEGREES, UNLESS NOTED OTHERWISE.

1.9. CONSTRUCTION LIMITS: THE CONTRACTORS MUST KEEP THEIR EMPLOYEES WITHIN THE DEFINED, CONTROLLED CONSTRUCTION LIMITS AT ALL TIMES OR AS DIRECTED BY THE GENERAL CONTRACTOR. THE GENERAL CONTRACTOR WILL BE RESPONSIBLE TO KEEP THE OWNER AND ARCHITECT INFORMED OF ANY OCCASIONS WHEN WORKERS NEED TO BE OUTSIDE THE CONSTRUCTION LIMITS. A SIX-FOOT HIGH CHAIN LINK CONSTRUCTION FENCE IS REQUIRED AROUND THE PERIMETER OF THE CONSTRUCTION LIMITS. TWELVE-FOOT WIDE, IN-SWINGING, LOCKABLE GATES ARE REQUIRED AT CONSTRUCTION LIMIT ACCESS POINTS.

1.10. BUILDING LAYOUT: CONTRACTOR SHALL STAKEOUT ENTIRE BUILDING LAYOUT AND ALL IMPROVEMENTS FOR APPROVAL BY THE ARCHITECT AND OWNER BEFORE BEGINNING WORK. ALL DISCREPANCIES TO BE DISCUSSED AND ADJUSTED AT THAT MEETING.

1.11. FINISH FLOOR ELEVATIONS: ARCHITECT AND CIVIL ENGINEER MUST APPROVE FINISH FLOOR ELEVATION/BUILDING LOCATION PRIOR TO SETTING FORM WORK.

02 - EXISTING CONDITIONS

2.1. VERIFY EXISTING CONDITIONS: THE CONTRACTOR SHALL VERIFY EXISTING BUILDING AND SITE CONDITIONS AS THEY RELATE TO THE CONSTRUCTION DOCUMENTS AND REPORT ANY AND ALL DISCREPANCIES TO THE ARCHITECT IN WRITING AND IN A TIMELY MANNER.

2.2. SITE DEMOLITION: CONTRACTOR SHALL BE RESPONSIBLE FOR THE REMOVAL OR MODIFICATION OF ANY AND ALL EXISTING CONDITIONS REQUIRED TO ACCOMPLISH WORK.

2.3. EXISTING TREE PROTECTION: ALL EXISTING TREES NOTED TO REMAIN ARE TO BE PROTECTED. CONTRACTOR SHALL PROVIDE CHAIN LINK FENCE AT A 15' RADIUS AROUND THE TREE TRUNK AND PAINT ON THE GROUND, WITH GREEN SURVEYING PAINT, AN OUTLINE OF THE TREE CANOPY ABOVE, SHOULD IT EXCEED 15'. AREAS INSIDE OF THE FENCING AND WITHIN THE GREEN PAINT ARE NOT TO BE USED FOR PERMANENT STORAGE OF MATERIAL OR EQUIPMENT OR VEHICLE PARKING. SHOULD DAMAGE OCCUR TO TREES SCHEDULED TO BE PROTECTED DUE TO INADEQUATE TREE PROTECTION, THE CONTRACTOR SHALL CONSULT WITH A PROFESSIONAL ARBORIST TO REMEDY THE SITUATION AND/OR REPLACE THE TREE WITH A NEW SPECIMEN EQUAL IN SPECIES AND SIZE. IN THE EVENT OF REPLACEMENT, THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE FULL ESTABLISHMENT OF THE TREE.

2.4. TREE AND STUMP REMOVAL: REMOVE ALL TREES AND STUMPS WITHIN 10' OF BUILDING UNLESS MARKED FOR PROTECTION. REVIEW ALL TRESS MARKED FOR REMOVAL WITH ARCHITECT PRIOR TO CUTTING (SEE SITE PLAN).

03 - CONCRETE

3.1. EXPOSED CONCRETE: ALL EXPOSED CONCRETE SURFACES SHALL RECEIVE A RUBBED FINISH TO CREATE A SMOOTH, UNIFORM APPEARANCE AND SHALL HAVE A MIN. 1/2" RADIUS ON ALL EXPOSED CORNER CONDITIONS.

3.2. CONCRETE BLOCK-OUTS: CONTRACTOR TO VERIFY ALL REQUIRED BLOCK-OUTS IN CONCRETE CONSTRUCTION DURING THE SHOP DRAWINGS PHASE AND/OR BEFORE CONCRETE POURS ARE ORDERED. CONTRACTOR SHALL PROVIDE BLOCK-OUTS IN ALL CONCRETE CONSTRUCTION FOR ALL ITEMS SHOWN ON ARCHITECTURAL, STRUCTURAL, AND MEP DRAWINGS AS BEING "RECESSED" OR FOR ITEMS SHOWN PENETRATING CONCRETE.

3.3. CONCRETE WORK: VIBRATE ALL CONCRETE IN BEAMS, PARTICULARLY AT THE RECESSES AROUND PERIMETER, TO ELIMINATE HONEYCOMBS.

04 - MASONRY

4.1. MASONRY EXPANSION JOINTS: WHERE NOT SHOWN OF DRAWINGS, MASONRY EXPANSION JOINTS ARE TO BE LOCATED 50'-0" APART MAXIMUM AND NO MORE THAN 25'-0" FROM BUILDING CORNERS. PLACE REQUIRED EXPANSION JOINTS AT INSIDE CORNERS WHERE POSSIBLE. HORIZONTAL EXPANSION JOINTS ARE REQUIRED AT ALL FLOORS WHERE STRUCTURAL RELIEF ANGLES ARE USED. MASONRY EXPANSION JOINTS ARE TO BE LOCATED TO LIMIT MASONRY AREA TO A MAXIMUM OF 500 SQ. FT. UNLESS OTHERWISE DIRECTED. THE CONTRACTOR SHALL COORDINATE ALL OF THE EXPANSION JOINT LOCATIONS WITH THE ARCHITECT AND STRUCTURAL ENGINEER BEFORE STARTING MASONRY WORK.

4.2. WEEPS: ALL MASONRY WEEPS ARE TO BE FULL OPEN HEAD JOINTS WITH PLASTIC INSERTS AT A MAXIMUM OF 24 INCHES ON CENTER. COORDINATE MASONRY CONSTRUCTION WITH "MORTAR NET" APPLICATION IN CAVITY WALLS AT ALL WALL FLASHING LOCATIONS.

4.3. MASONRY REINFORCING: ALL MASONRY WALL TIES SHALL BE SPACED A MAXIMUM OF 16" OC VERTICAL AND 16" OC HORIZONTAL. WALL TIE LOCATIONS THAT FALL NEXT TO CONCRETE COLUMNS REQUIRE THE USE OF DOVETAIL EMBED ANCHORS AND WALL TIES THAT FALL NEXT TO STEEL BEAMS REQUIRE THE USE OF SCREW APPLIED WALL ANCHORS. SEE STRUCTURAL DRAWINGS FOR ADDITIONAL REINFORCING REQUIREMENTS AND SPECIFICATIONS.

4.4. MASONRY LINTELS: PROVIDE LINTELS AT ALL MASONRY OPENINGS AS SHOWN IN STRUCTURAL DRAWINGS.

4.5. BOND COURSES: PROVIDE CONTINUOUS BOND COURSES AS SHOWN IN STRUCTURAL DRAWINGS.

4.6. DEFECTIVE MASONRY: BROKEN, CHIPPED, OR CRACKED CONCRETE MASONRY UNITS SHALL NOT BE USED IN THIS PROJECT.

05 - METALS

5.1. STEEL FINISH: ALL EXPOSED STEEL IS TO BE HOT DIPPED GALVANIZED OR SS.

5.2. EXTERIOR FASTENERS: USE HOT DIP GALVANIZED OR SS FASTENERS AT ALL EXTERIOR CONDITIONS. CONTRACTOR SHALL CONFIRM THAT ALL FASTENERS SUIT LOAD AND CONDITIONS.

5.3. MISCELLANEOUS STEEL: CONTRACTOR SHALL PROVIDE FOR ALL MISCELLANEOUS STEEL IN CONTRACT. NOT ALL STRUCTURAL AND MISCELLANEOUS STEEL IS SHOWN IN ARCHITECTURAL DRAWINGS AND NOT ALL MISCELLANEOUS STEEL IS SHOWN IN STRUCTURAL DRAWINGS. SOME BUILDING COMPONENTS AND SYSTEMS INCLUDING BUT NOT LIMITED TO PLUMBING FIXTURES, MECHANICAL UNITS, LIGHT FIXTURES, GUARDRAILS, WINDOWS, SIGNAGE, TOILET PARTITIONS, SPECIAL WALL CONDITIONS, EAVE, RAKE, WINDOW & DOOR FRAMING, ETC. MAY REQUIRE MISCELLANEOUS STEEL NOT SHOWN IN THE DRAWINGS.

5.4. STEEL DETAILING: CONTRACTOR TO VERIFY LOCATIONS AND SIZES OF ALL ROOF PENETRATIONS WITH MECHANICAL, STRUCTURAL, AND ARCHITECTURAL DRAWINGS AND VERIFY THAT STRUCTURAL STEEL MEETS THE UL ASSEMBLY SPECIFIED BEFORE DETAILING STEEL.

5.5. GUARDRAIL LOAD DESIGN: ALL GUARDRAILS ARE TO BE DESIGNED TO WITHSTAND THE REQUIREMENTS STATED IN THE MOST RECENT AND APPLICABLE BUILDING CODE. SEE LIFE SAFETY REVIEW IN DRAWINGS.

5.6. HANDRAILS: UNLESS NOTED OTHERWISE, ALL HANDRAILS ARE TO BE 1-1/4" OD (WOOD AND STEEL).

5.7. METAL STUDS: ALL METAL STUDS ARE 16" O.C. UNLESS NOTED OTHERWISE, SIZES AND GAUGES ARE SHOWN ON DRAWINGS OR IN SPECIFICATIONS.

06 - WOOD & PLASTICS

6.1. WOOD STUDS: WOOD WALL STUDS SHALL BE 16" OC UNLESS NOTED OTHERWISE.

6.2. WOOD BLOCKING: PROVIDE BLOCKING AND SOLID GROUNDS FOR ALL EQUIPMENT, ACCESSORIES SUCH AS: FIXTURES, TOILET PARTITIONS, WALL MOUNTED DOOR STOPS, HARDWARE, SHELVING, CABINETS, APPLIANCES, PLUMBING FIXTURES, ETC.

6.3. BLOCK-OUTS IN STUD WALLS: COORDINATE WITH ARCHITECTURAL, MECHANICAL, ELECTRICAL, AND STRUCTURAL FOR REQUIRED ROUGH-IN DIMENSIONS. PROVIDE STUD SPACING, BLOCKS, ETC. TO SUIT VARIOUS EQUIPMENT, REGISTERS, GRILLES, ETC. TO BE BUILT-IN. FORM HEADERS TO ADEQUATELY SUIT SPANS WHERE REQUIRED.

6.4. TREATED WOOD: ALL WOOD IN CONTACT WITH EARTH, MASONRY, CONCRETE OR STEEL SHALL BE PRESSURE PRESERVATIVE TREATED (PT), SEE SPECS AND DRAWINGS.

07 - THERMAL PROTECTION

7.1. MOLD AND MILDEW PLAN: THE CONTRACTOR WILL PROVIDE A COMPLETE PHOTOGRAPHIC RECORD OF THE ENTIRE INSTALLATION PROCESS AND COMPLETED INSTALLATION OF ALL BELOW AND ABOVE GRADE WATERPROOFING SYSTEM INSTALLATION, INCLUDING BUT NOT LIMITED TO, UNDER SLAB, SUB GRADE WALLS, ABOVE GRADE WALLS, WINDOWS, DOORS, PARAPETS, ROOF, ETC. BEFORE COVERING UP WITH FINISH MATERIAL. ALL PHOTOGRAPHS SHALL BE DATE-STAMPED WITH LOCATIONS NOTED ON THE AS-BUILT SET OF DRAWINGS. PHOTOGRAPHIC COVERAGE SHALL AT LEAST INCLUDE 50% OF EACH INSTALLED WATERPROOFING SYSTEM.

7.2. WATER TESTING AND RECORDS: THE CONTRACTOR SHALL PROVIDE WATER TESTING OF THE ENTIRE BUILDING ENVELOPE WATER PROTECTION SYSTEM WHICH INCLUDES BUT IS NOT LIMITED TO UNDER SLAB, SUB GRADE WALLS, ABOVE GRADE WALLS AND WINDOWS, FLASHING, AND ROOF CONSTRUCTION, IN A TIMELY MANNER AND AS DIRECTED BY THE ARCHITECT AND CXA (WHEN APPLICABLE). ANY DEFICIENCIES DISCOVERED WILL BE CORRECTED (INCLUDING REPLACING ANY DAMAGED MATERIALS) AND RETESTED PRIOR TO BEGINNING MASONRY INSTALLATION.

7.3. INSULATION AND VAPOR BARRIERS: THE CONTRACTOR IS RESPONSIBLE FOR MAINTAINING THE CONTINUITY OF THE BUILDING INSULATION AND VAPOR BARRIERS WHEN SEPARATING CONDITIONED, UNCONDITIONED, AND SEMI-CONDITIONED SPACES. UNLESS NOTED OTHERWISE CONTRACTOR SHALL PROVIDE:

- ON EXTERIOR CMU: 2" R10 RIGID INSULATION ON EXTERIOR SIDE
- ON EXTERIOR METAL OR WOOD STUDS: 6" R19 BLANKET INSULATION WITHIN STUD SPACING
- IN ATTIC: 9-1/2" R30 BLANKET INSULATION THROUGHOUT ATTIC (AT CEILING AND ROOF DECK)

7.1. ROOF PENETRATIONS: WHERE PLUMBING, MECHANICAL, ELECTRICAL DEVICES AND EQUIPMENT PENETRATE ROOF, PROVIDE FLASHING CAPS, ROOFING MASTIC AND MEMBRANES AS REQUIRED TO MAKE PENETRATIONS THOROUGHLY WATERTIGHT. USE MATERIALS COMPATIBLE WITH ROOF MATERIAL. PROTECT VENTS FROM ULTRAVIOLET LIGHT AS RECOMMENDED BY MANUFACTURER. ALL PENETRATIONS IN ROOF CONSTRUCTION TO BE PERFORMED BY A QUALIFIED ROOFING CONTRACTOR AND AS PART OF THE ROOF WARRANTY. NO PENETRATIONS ARE TO BE PERFORMED BY PLUMBERS OR OTHER NON-ROOFING SUBCONTRACTORS.

7.2. SHEET METAL WORK: ALL SHEET METAL WORK INCLUDING METAL GAUGE THICKNESS, WALL FLASHING, GUTTERS, DOWN SPOUTS, EXPANSION JOINTS, FASCIA METAL, ETC. SHALL COMPLY WITH THE STANDARDS AND RECOMMENDED PRACTICES OF THE SHEET METAL AND AIR-CONDITIONING CONTRACTORS NATIONAL ASSOCIATION. (SMACNA)

7.3. GUTTER EXPANSION JOINTS: GUTTER EXPANSION JOINTS ARE REQUIRED AT A MAXIMUM OF 50'-0."

7.4. METAL FLASHING FINISH: ALL METAL ROOF AND WALL FLASHING, EDGE STRIPS, EXTERIOR TRIM, DOWN SPOUTS, GUTTERS SHALL BE FACTORY FINISHED AND COMPATIBLE WITH SPECIFIED ROOFING SYSTEM (WHERE APPLICABLE). CONTRACTOR SHALL PROVIDE ARCHITECT WITH MANUFACTURER'S COLOR SAMPLES FOR APPROVAL.

7.5. WALL OPENING FLASHING: PROVIDE FLASHINGS ON ALL SIDES OF ALL WINDOW, DOOR AND LOUVER PENETRATIONS INCLUDING HEAD FLASHINGS AND WEEPS, JAMB FLASHINGS TO ALLOW MOISTURE TO FALL VERTICALLY TO SILL FLASHING, AND SILL FLASHINGS WITH END DAMS AND WEEPS.

7.6. CAVITY WALL FLASHING: THRU-WALL MEMBRANE FLASHING IS REQUIRED IN ALL MASONRY CAVITY WALL CONDITIONS WHERE THE WATER MUST BE DIRECTED OUT OF THE CAVITY WALL SPACE. IT IS CRITICAL THAT THE CONTRACTOR VERIFY THAT THE THRU-WALL FLASHING IS COORDINATED WITH THE OTHER TRADES SO THAT THE INTEGRITY OF THE TOTAL FLASHING SYSTEM WORKS AS DESIGNED AND THAT ALL FLASHING PIECES ARE IN THE RIGHT LOCATION TO DIRECT WATER OUT OF THE BUILDING.

7.7. UL APPROVED STANDARDS: THE CONTRACTOR AND SUBCONTRACTOR ARE TO PROVIDE THE ARCHITECT WITH A WRITTEN GUARANTEE THAT THE SPECIFIED AMOUNTS OF FIREPROOFING AND FIRESTOPPING ARE INSTALLED PROPERLY TO MEET APPLICABLE CODES AND UL APPROVED CONSTRUCTION STANDARDS.

7.8. JOINT SEALANTS: PROVIDE CAULKING AND/OR SEALANT AT ALL CRACKS AND INTERSECTIONS OF MATERIALS WHERE WEATHER-TIGHTNESS OR INSECT CONTROL IS NEEDED OR WHERE APPEARANCE IS IMPORTANT. INTENT IS A NEAT, WEATHER TIGHT, FINISHED PROJECT AT ALL LOCATIONS.

7.9. SEALANT COLORS: ALL EXTERIOR SEALANT COLOR IS TO MATCH THE MORTAR COLOR OF MASONRY CONSTRUCTION. INCLUDE A SAMPLE WITH MASONRY MOCK-UP FOR APPROVAL. ALL INTERIOR CAULK COLORS ARE TO MATCH ADJACENT PAINT OR MATERIAL COLORS OR BE PAINTABLE.

7.10. EXPANSION JOINTS: PROVIDE FOR EXPANSION JOINTS AND COVERS WHERE NEEDED IN ALL MATERIALS.

08 - DOORS & WINDOWS

8.1. THRESHOLDS: CONTRACTOR TO SET DOOR THRESHOLDS IN A FULL BED OF SEALANT.

8.2. DOOR LOCATION DIMENSIONS: ALL DOORS SHALL BE LOCATED 6" FROM THE FACE OF THE WALL IN METAL STUD/GYPSUM BOARD WALLS, 8" FROM THE FACE OF THE WALL IN CMU CONSTRUCTION, OR CENTERED ON THE WALL, UNLESS NOTED OTHERWISE ON THE DRAWINGS.

8.3. EXTERIOR LOUVERS: THE EXTERIOR LOUVERS WILL BE FACTORY PRE-FINISHED TO EXACTLY MATCH THE COLOR OF THE ADJACENT SURFACES. CONTRACTOR SHALL VERIFY THAT ALL LOUVERS PREVENT WATER FROM ENTERING THE BUILDING. A SAMPLE LOUVER COLOR WILL BE APPROVED BEFORE MANUFACTURING.

09 - FINISHES

9.1. PARTITION TYPES: WHERE CHANGES IN PARTITION TYPES COME TOGETHER ALONG A CONTINUOUS WALL, ADJUST THE STUDS TO ALLOW THE OUTERMOST FACES OF FINISH TO BE FLUSH. PARTITION TYPE TRANSITIONS SHALL BE IMPERCEPTIBLE.

9.2. CEMENTITIOUS BACKER BOARD: CEMENTITIOUS BACKER BOARD IS REQUIRED BEHIND ALL CERAMIC WALL TILE LOCATIONS.

9.3. FLOOR TRANSITIONS: AT ALL FLOORING PRODUCT TRANSITIONS, PROVIDE NECESSARY ADA COMPLIANT TRANSITION MATERIALS.

9.4. FLOOR PREP: ALL FLOORS TO BE PROPERLY PREPPED AND FLOATED AS REQUIRED AND BASED ON EXISTING OR NEW SLAB CONIDTIONS.

9.5. FLOOR PATTERNS: CONTRACTOR TO LAYOUT ALL PATTERN FLOOR AREAS AND DRY INSTALL A PORTION OF DESIGN FOR ARCHITECT'S APPROVAL BEFORE INSTALLING FLOOR.

9.6. TILE WORK: ALL FLOOR AND WALL TILE INSTALLATIONS SHALL COMPLY WITH THE STANDARDS AND RECOMMENDED PRACTICES OF THE TCA HANDBOOK FOR CERAMIC TILE INSTALLATION BY THE TILE COUNCIL OF NORTH AMERICA, INC.

9.7. STAIR FINISHES: CONTRACTOR TO VERIFY STAIR FINISH ON FINISH FLOOR PLANS, STAIR PLANS AND DETAILS, AND FINISH SCHEDULE OF ROOM THAT STAIR IS LOCATED BEFORE POURING CONCRETE TREAD. IF NO FINISH IS SHOWN OR CALLED FOR ON STAIR, THEN CONTRACTOR TO PROVIDE FINISH FOR TREADS AND LANDINGS THE SAME AS FINISH SPECIFIED IN ROOM STAIR IS LOCATED ON THE FINISH SCHEDULE. ALL EXPOSED PORTIONS OF STEEL PAN STAIRS SHALL BE PAINTED WHERE NO OTHER FINISH IS SHOWN.

9.8. CEILING GRIDS: ALL SUSPENDED CEILING GRIDS SHALL BE APPROVED BY THE ARCHITECT FOR EXACT LAYOUT BEFORE INSTALLATION. IF THE GRID IS INSTALLED WITHOUT APPROVAL, THEN THE GRID SHALL BE REMOVED AND REINSTALLED BY THE CONTRACTOR AT NO ADDITIONAL COST TO THE OWNER.

9.9. PAINT: ALL SURFACES IN THE PROJECT THAT ARE NOT PRE-FINISHED PAINTABLE IN NATURE ARE TO BE PAINTED. NOTHING SHALL BE LEFT UNPAINTED. SEE SPECIFICATIONS FOR TYPES OF PAINT TO BE USED. CONTRACTOR SHALL PUT UP AN 8'X8' SAMPLE AREA OF ALL PAINT COLORS FOR APPROVAL BEFORE ORDERING PAINT.

9.10. GRILLES: ALL GRILLES THAT ARE EXPOSED ARE TO BE THE MATCHING COLOR OF ADJACENT SURFACES UNLESS OTHERWISE NOTED. EXACT PLACEMENT OF GRILLE LOCATIONS IN THE WALLS ARE TO BE APPROVED BY THE ARCHITECT BEFORE INSTALLATION. IF GRILLES ARE INSTALLED WITHOUT APPROVAL, THEY WILL BE RELOCATED AND THE WALL PATCHED BY THE CONTRACTOR AT NO ADDITIONAL COST TO THE OWNER.

9.11. FURR-DOWN PAINT: UNLESS NOTED OR SPECIFIED OTHERWISE, ALL WALL SURFACES AT FURR DOWNS SHALL RECEIVE PAINTED FINISH TO MATCH ADJACENT WALL COLORS. VERIFY ALL FURR DOWNS WITH ARCHITECT BEFORE PROCEEDING.

9.12. CMU FINISH: ALL CMU BLOCK TO RECEIVE DRYLOK COATING AS SPECIFIED.

9.13. ACOUSTICAL BATT: INSULATE ALL INTERIOR WALLS WITH A MINIMUM OF 3-1/2" UN-FACED FIBERGLASS ACOUSTICAL BATT INSULATION FOR ACOUSTIC CONTROL.

10 - SPECIALTIES

10.1. RECESSED EQUIPMENT: VERIFY THAT ALL RECESSED EQUIPMENT SPECIFIED INCLUDING BUT NOT LIMITED TO FIRE EXTINGUISHER CABINETS, PAPER TOWEL DISPENSERS, ETC., WILL BE CONCEALED IN WALLS. ADJUST WALL THICKNESS AS REQUIRED FOR RECESSED EQUIPMENT.

10.2. BLOCKING FOR EQUIPMENT: PROVIDE BLOCKING AND SOLID GROUNDS FOR ALL EQUIPMENT AND ACCESSORIES INCLUDING BUT NOT LIMITED TO PLUMBING AND LIGHTING FIXTURES, TOILET PARTITIONS, BATHROOM ACCESSORIES, WALL-MOUNTED DOOR STOPS, HARDWARE, SHELVING, CABINETS, APPLIANCES, ETC. ALL WOOD BLOCKING IN METAL STUD PARTITIONS SHALL BE FIRE RETARDANT TREATED.

10.3. EQUIPMENT INSTALLATION: VERIFY ALL EQUIPMENT INSTALLATION CLEARANCES WITH MANUFACTURER, INCLUDING BUT NOT LIMITED TO APPLIANCES AND EQUIPMENT NOT-IN-CONTRACT BUT SHOWN IN DRAWINGS.

13 - SPECIAL CONSTRUCTION

13.1. METAL BUILDING REQUIREMENTS: NOT APPLICABLE TO THIS PROJECT.

GENERAL MEP

MEP.1 EQUIPMENT INSTALLATION: CONTRACTOR SHALL VERIFY ALL EQUIPMENT INSTALLATION CLEARANCES AND POWER REQUIREMENTS WITH MANUFACTURER AND COORDINATE ALL SUBCONTRACTORS TO KEEP THE SYSTEMS AS CLOSE TO THE UNDERSIDE OF FLOOR DECK AS POSSIBLE.

MEP.2 FURR-DOWNS / FURR-OUTS: UNLESS OTHERWISE NOTED, THE CONTRACTOR SHALL NOT FURR-OUT OR FURR-DOWN FOR ANY REASON. THE CONTRACTOR SHALL NOTIFY THE ARCHITECT IMMEDIATELY IF IS SUSPECTED THAT A PIPE, DUCT, CONDUIT, OR ANY OTHER MECHANICAL, ELECTRICAL OR PLUMBING DEVICE WILL NOT REMAIN CONCEALED UNDER A FLUSH CONDITION. RE; REFLECTED CEILING PLANS FOR THE LAYOUT OF APPROVED FURR-DOWNS.

MEP.3 DEVICE CONTROLLER LOCATIONS: THE COLORS AND PLACEMENT OF ALL VISIBLE DEVICE CONTROLLERS FOR MECHANICAL, ELECTRICAL, A/V, COMMUNICATIONS, AND OTHER RELATED EQUIPMENT SHALL BE COORDINATED AND APPROVED BY THE ARCHITECT PRIOR TO INSTALLATION TO ENSURE A COHESIVE AND ORGANIZED RESULT. ALL DEVICE CONTROLLERS SHALL MATCH IN MOUNTING HEIGHT ABOVE FINISHED FLOOR AND IN COLOR.

MEP.4 EXPOSED MECHANICAL/ELECTRICAL FIXTURE MOUNTING HEIGHTS: REFER TO ARCHITECTURAL REFLECTED CEILING PLANS AND INTERIOR ELEVATIONS FOR MOUNTING LOCATIONS AND HEIGHTS OF ALL LIGHT FIXTURES AND CEILING FANS AND MECHANICAL DUCTS, DIFFUSERS, ETC. IF MOUNTING HEIGHTS ARE NOT SHOWN, OR DIFFER FROM THE ENGINEERING DRAWINGS, CONSULT THE ARCHITECT.

MEP.5 SPRINKLER SYSTEM SHOP DRAWINGS: THE CONTRACTOR MUST SUBMIT A SPRINKLER SYSTEM LAYOUT WITH THE SPRINKLER SYSTEM SUBMITTAL FOR REVIEW BY THE ARCHITECT. THIS LAYOUT DRAWING MUST BE TO A MIN. OF 1/8=1' SCALE. THE DRAWING MUST INCLUDE CEILING MATERIALS, LIGHT FIXTURES, HVAC DIFFUSERS AND RETURNS, SMOKE DETECTORS, ETC.

MEP.6 SPRINKLER SYSTEM: THE BUILDING FIRE PROTECTION SPRINKLER SYSTEM IS TO BE INSTALLED ABOVE CEILINGS UNLESS NOTED OTHERWISE ON RCP'S. SPRINKLER HEADS SHALL BE CENTERED IN CEILING TILES OR GYPSUM BOARD CEILINGS. WHERE HEADS ARE NOT CENTERED OR OUT OF ALIGNMENT, THEY SHALL BE REINSTALLED AND ALL SURROUNDING FINISHES REPAIRED WHERE FORMER HOLE WAS LOCATED. FIRE SPRINKLER SUBCONTRACTOR SHALL BE PREPARED TO MODIFICATIONS TO THREADED PIPE IN THE FIELD AS REQUIRED TO ENSURE PROPER LOCATION OF HEADS. (WHERE CEILINGS ARE NOT IN CONTRACT (IE, SHELLED SPACES), THE FUTURE CEILING HEIGHTS ARE SHOWN ON THE RCP'S. NOTE THAT IN SUCH CASE, CONTRACTOR MUST TAKE INTO ACCOUNT OTHER SYSTEMS TO BE INSTALLED IN FUTURE SPACE AND COORDINATE PLACEMENT OF FIRE SPRINKLER ACCORDINGLY).

MEP.7 FLOOR DRAINS: WHERE FLOOR DRAINS ARE PRESENT, FLOORS SHALL SLOPE AT A MINIMUM OF 1/8" PER FOOT TO THE DRAIN AND DRAINS SHALL BE LOCATED AT THE LOWEST POINT OF THE AREA WHICH THE DRAIN SERVES.

MEP.8 LIGHT FIXTURES: STEM LENGTH OF ALL PENDANT LIGHT FIXTURES SHALL BE APPROVED BY THE ARCHITECT. CONTRACTOR SHALL INSTALL A SAMPLE FIXTURE FOR APPROVAL, MAKING ADJUSTMENTS TO THE LENGTH AS REQUIRED.

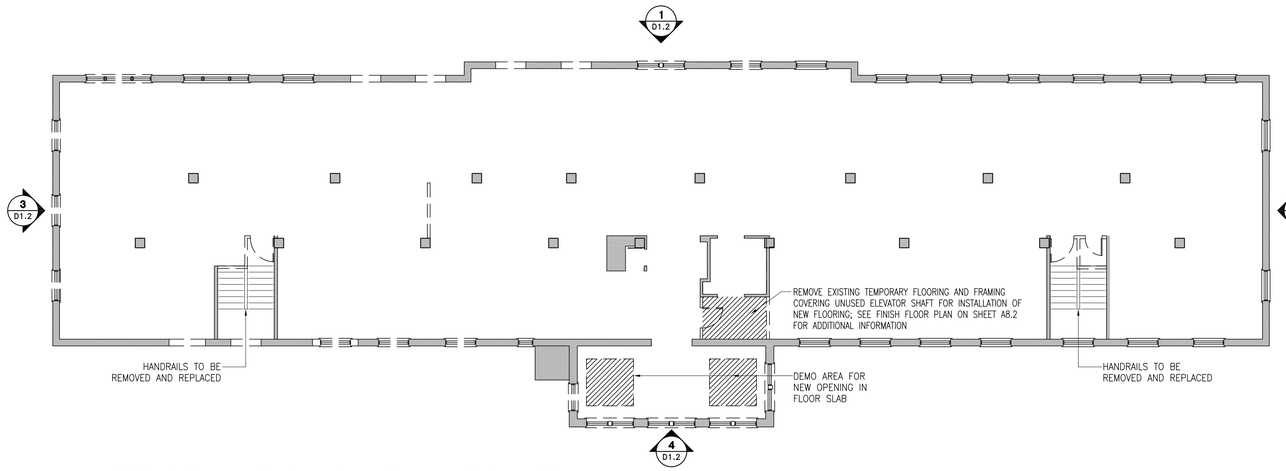
31 - EARTHWORK

31.1. SITE TRENCHING: FOR ALL TRENCHING WORK, CONTRACTOR SHALL REPLACE ALL DISTRIBUTED GROUND WITH NEW FILL AND SOD; REPLACE ALL CUT, BROKEN, REMOVED, DISTURBED ASPHALT PAVING, CONCRETE CURBS AND CONCRETE SIDEWALKS WITH NEW IN-KIND MATERIALS TO MATCH ORIGINAL DESIGN. USE APPROVED BACKFILL UNDER ALL ITEMS AS SPECIFIED. CUT ALL SIDEWALKS AT EXISTING CONTROL JOINTS ONLY. IF EXISTING UTILITIES, ARE ENCOUNTERED, PATCH ANY DISTURBED LINES.

31.2. TEMPORARY SHORING: PROVIDE SHORING AS NEEDED FOR EXCAVATION FOOTINGS, MECHANICAL & ELECTRICAL WORK AS DIRECTED BY THE CIVIL, STRUCTURAL DRAWINGS, AND REQUIRED BY CODE AND OSHA REQUIREMENTS.

31.3. SILT AND SOIL EROSION CONTROL: THE CONTRACTOR MUST CONTROL EROSION FROM SITE DURING CONSTRUCTION OF THE PROJECT AS REQUIRED IN THE SPECIFICATIONS.

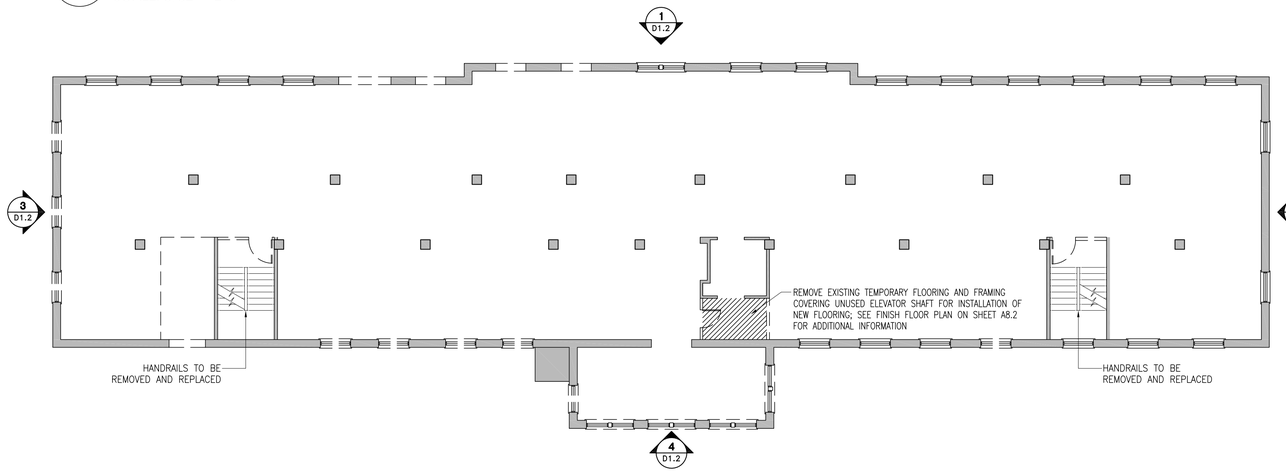
32 - EXTERIOR IMPROVEMENTS



32.1. CONCRETE PAVEMENT SLOPES: SLOPE ALL CONCRETE PARKING LOT PAVEMENT A MIN. OF 1% IN DIRECTION OF WATER RUN-OFF AND SLOPE ALL CONCRETE PORCHES, SLABS, & SIDEWALKS AWAY FROM BUILDING 1/4" PER FOOT TO INSURE POSITIVE DRAINAGE. CONTRACTOR IS RESPONSIBLE FOR MAINTAINING POSITIVE RUN-OFF AWAY FROM THE BUILDING AND THE ELIMINATION OF STANDING WATER ON THE PARKING LOT AND SITE. ANY CONCRETE, PAVED, OR FINISHED PAVER SURFACES THAT POND WATER SHALL BE REMOVED AND TOTALLY REWORKED TO PROVIDE A NON-PONDING FINISHED RESULT.

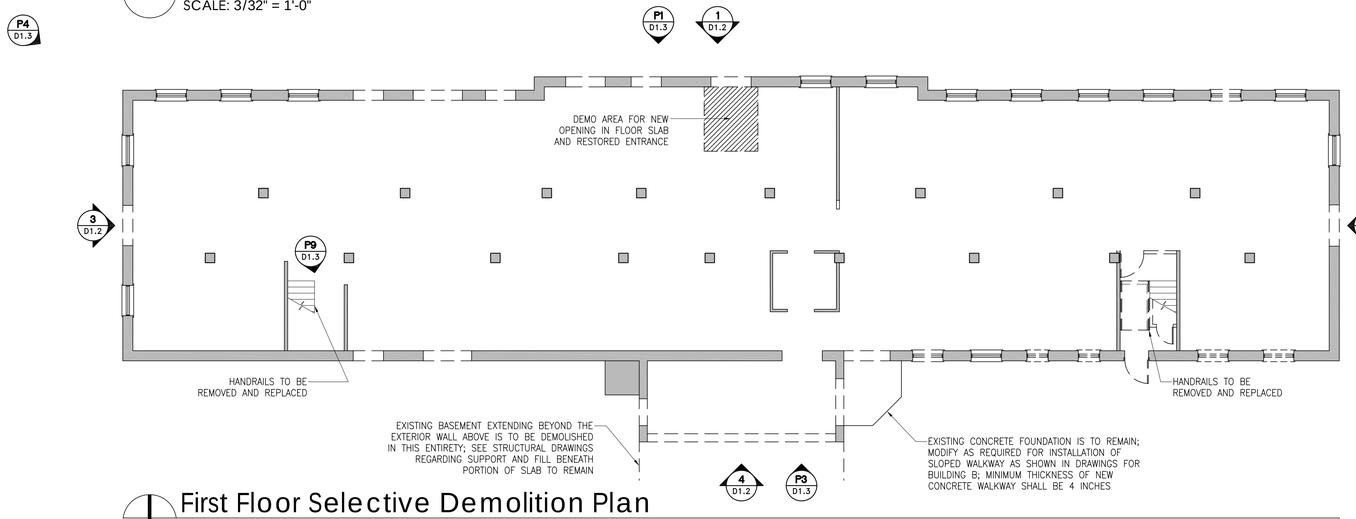
32.2. FINISH GRADING: SEE CIVIL DRAWINGS FOR ALL FINISH GRADES AROUND THE BUILDING. FINISH GRADES SHALL NEVER BE ABOVE THE FINISH FLOOR ELEVATION (FFE) AND SHALL SLOPE AWAY FROM BUILDING ON ALL SIDES. THE FINISH GRADE SHALL BE A MINIMUM OF 1/2" BELOW THE FFE AT ALL DOORS. ALL DOOR THRESHOLDS SHALL MEET THE ADA.

32.3. TERMITE PROTECTION: PROVIDE TERMITE TREATMENT, WITH CERTIFICATE TO OWNER; SEE SPECS. PROVIDE A FIVE-YEAR WARRANTY.



32.4. SLEEVES FOR FUTURE: THE GENERAL CONTRACTOR SHALL PROVIDE A MINIMUM OF (2) EMPTY 4" PVC SLEEVES UNDER ALL PAVING AREAS SO ALL AREAS ARE ACCESSIBLE IN THE FUTURE. THESE SLEEVES CAN BE USED FOR IRRIGATION AND ELEC. CONNECTIONS.

32.5. SODDING DISTURBED SOIL: ALL DISTURBED GROUNDS LOCATED INSIDE THE PROJECT CONSTRUCTION LIMITS NO



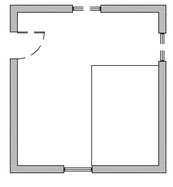
Third Floor Selective Demolition Plan

SCALE: 3/32" = 1'-0"

Second Floor Selective Demolition Plan

SCALE: 3/32" = 1'-0"

First Floor Selective Demolition Plan



SCALE: 3/32" = 1'-0"

General Demolition Notes

1. THE CONTRACTOR IS RESPONSIBLE TO REMOVE ALL THAT IS REQUIRED IN ORDER TO ACCOMPLISH THE NEW WORK.
2. THE CONTRACTOR IS RESPONSIBLE FOR THE ENTIRE BUILDING AND THE SURROUNDING SITE INSURE THAT GAS, ELECTRIC, AND WATER SYSTEMS ARE SAFELY MONITORED AND PROTECTED DURING DEMOLITION.
3. THE PUBLIC WALKS AND STREETS TO REMAIN SHALL BE PROTECTED AND THE PROPER MEASURES TAKEN AND COORDINATED WITH THE CITY TO PROTECT PUBLIC SAFETY. THIS SHALL INCLUDE SAFE AND CLEAR LIMITS OF CONSTRUCTION.
4. THE CONTRACTOR IS RESPONSIBLE FOR KEEPING THE DEMOLITION WORK AREA SAFE BY SHORING AND BRACING THE BUILDING AS REQUIRED DURING DEMOLITION AND DEBRIS REMOVAL. THE ARCHITECT SHALL BE CONTACTED WHENEVER UNCLEAR CONDITIONS EXIST.
5. THE BUILDING MUST BE KEPT SECURE AND DRY DURING DEMOLITION. WHEN DEMO CONTRACT IS COMPLETE, INSTALL PROTECTIVE MEASURES TO ENSURE THE SECURITY AND CONTINUED WEATHERPROOFING OF THE BUILDING.
6. PROTECT EXISTING FINISHES TO REMAIN INCLUDING BUT NOT LIMITED TO FACE BRICK, TERRA COTTA AND PLASTER FROM DAMAGE DURING DEMOLITION.
7. IF DURING THE COURSE OF DEMOLITION A CONFLICT ARISES AS TO WHAT IS TO BE REMOVED CONTACT THE ARCHITECT FOR ON SITE CLARIFICATION BEFORE PROCEEDING.
8. THE CONTRACTOR IS RESPONSIBLE FOR ALL SALVAGED MATERIALS THAT ARE TO BE REUSED AND SHALL NEATLY STORE THEM IN A DRY WEATHER PROOF AREA ON SITE. ALL ITEMS TO BE STORED AS APPROVED BY ARCHITECT. CLEAN ALL SALVAGE ITEMS THOROUGHLY BEFORE STORING.
9. EXISTING PLASTER WALLS THAT ARE TO REMAIN SHALL BE PROTECTED AS REQUIRED.
10. IF ANY ITEM THAT IS TO REMAIN OR BE REUSED IN THE PROJECT IS DAMAGED, ALL EXPENSES INCURRED IN REPRODUCING ANY DAMAGED ITEM WILL BE THE RESPONSIBILITY OF THE CONTRACTOR. ALL REPLACEMENT REPRODUCTIONS SHALL BE APPROVED BY THE ARCHITECT FOR ACCURACY.
11. MECHANICAL & PLUMBING: THE FINAL PROJECT WILL UTILIZE COMPLETELY NEW MECHANICAL AND PLUMBING SYSTEMS. THE CONTRACTOR IS TO REMOVE ANY REMAINING EXTERIOR AND INTERIOR MECHANICAL AND PLUMBING EQUIPMENT INCLUDING BUT NOT LIMITED TO: GAS AND WATER PIPES, DUCTWORK, FIRE SPRINKLER EQUIPMENT AND OTHER MISC. EQUIPMENT UNLESS NOTED OTHERWISE.
12. ELECTRICAL: THE FINAL PROJECT WILL UTILIZE A COMPLETELY NEW ELECTRICAL SYSTEM. THE CONTRACTOR IS TO REMOVE ANY REMAINING EXTERIOR AND INTERIOR ELECTRICAL EQUIPMENT INCLUDING BUT NOT LIMITED TO: CONDUIT, WIRING, LIGHT FIXTURES IN AND AROUND BUILDING, AND BOTH INTERIOR AND EXTERIOR CONDUIT ETC. UNLESS SPECIFIED BY THE ELECTRICAL ENGINEER.

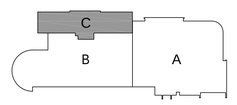
Existing & New Windows Note

THE NORTH FACADE OF THE HISTORIC HOSPITAL IS TO FEATURE THE ORIGINAL WOODEN WINDOWS THROUGHOUT. OPENINGS WHERE THE ORIGINAL WINDOWS HAVE BEEN REMOVED, OR ELEMENTS OF WINDOWS ARE DAMAGED BEYOND REPAIR, SHALL BE FILLED OR REPAIRED WITH SALVAGED WINDOWS FROM THE OTHER FACADES OF THE BUILDING. ALL HISTORIC WINDOWS ON THIS FACADE ARE TO BE RESTORED TO A "LIKE NEW" CONDITION. ALL LOOSE AND FLAKING PAINT IS TO BE REMOVED, AND THE WINDOWS ARE TO BE REPAINTED TO MATCH THE ORIGINAL COLOR.

ALL OTHER WINDOWS THROUGHOUT THE HISTORIC BUILDING SHALL BE NEW ENERGY EFFICIENT, METAL CLAD, WOOD WINDOWS WITH LOW–E, INSULATED GLAZING. THE NEW WINDOWS SHALL EXACTLY MATCH THE HISTORIC WINDOWS IN DIMENSION, PROFILE, DETAIL, AND COLOR. NEW WINDOWS SHALL BE JELD–WEN OR EQUAL.

First Floor Plan



SCALE: 1/8" = 1'-0"

General Plan Notes

1. SEE DIMENSION PLAN SHEET(S) FOR PLAN DIMENSIONS.
2. ALL DIMENSIONS ARE TO THE FACE OF FINISH OR FACE OF BRICK UNLESS NOTED OTHERWISE.
3. IN MASONRY WALL CONSTRUCTION DIMENSIONS ARE TO ROUGH OPENINGS.
4. IN STUD WALL CONSTRUCTION DIMENSIONS ARE TO CENTERLINE OF OPENINGS.
5. ALL DOORS ARE 6" FROM FACE OF STUD UNLESS DIMENSIONED OTHERWISE.
6. ALL ANGLES ARE 90° OR 45° UNLESS DIMENSIONED OTHERWISE.
7. SEE SHEETS T1.1 FOR GENERAL NOTES.
8. SEE SHEET A4.1–4.3 FOR RCP's.

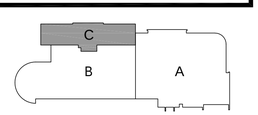
Third Floor Plan



SCALE: 1/8" = 1'-0"

ALL NON–RATED PARTITIONS SHALL BE TYPE 'A1' UNLESS NOTED OTHERWISE ON THIS SHEET.

Existing & New Windows

THE NORTH FACADE OF THE HISTORIC HOSPITAL IS TO FEATURE THE ORIGINAL WOODEN WINDOWS THROUGHOUT. OPENINGS WHERE THE ORIGINAL WINDOWS HAVE BEEN REMOVED, OR ELEMENTS OF WINDOWS ARE DAMAGED BEYOND REPAIR, SHALL BE FILLED OR REPAIRED WITH SALVAGED WINDOWS FROM THE OTHER FACADES OF THE BUILDING. ALL HISTORIC WINDOWS ON THIS FACADE ARE TO BE RESTORED TO A "LIKE NEW" CONDITION. ALL LOOSE AND FLAKING PAINT IS TO BE REMOVED, AND THE WINDOWS ARE TO BE REPAINTED TO MATCH THE ORIGINAL COLOR.

ALL OTHER WINDOWS THROUGHOUT THE HISTORIC BUILDING SHALL BE NEW ENERGY EFFICIENT, METAL CLAD, WOOD WINDOWS WITH LOW–E, INSULATED GLAZING. THE NEW WINDOWS SHALL EXACTLY MATCH THE HISTORIC WINDOWS IN DIMENSION, PROFILE, DETAIL, AND COLOR. NEW WINDOWS SHALL BE JELD–WEN OR EQUAL.

THIRD FLOOR DIMENSION PLAN

Roof Demolition Legend

- – – – – DASHED LINES INDICATE LOCATIONS OF PREVIOUSLY REMOVED ROOFTOP EQUIPMET
- EXISTING ROOF SYSTEM TO BE DEMOLISHED

Demolition Roof Plan

SCALE: 1/8" = 1'-0"

Terra Cotta Keyed Notes

1. TERRA COTTA PARAPET CAP AND CORNICE TO BE RESTORED. REMOVE AND REPLACE IN-KIND TERRA COTTA PIECES WHERE INDICATED, INCLUDING ADJACENT PIECES THAT MUST BE REMOVED IN ORDER TO GAIN ACCESS TO THOSE THAT MUST BE REMOVED. REVIEW SPECIFICATIONS FOR TERRA COTTA RESTORATION.
2. INSTALL LEAD TEE-CAP AND SEALANT AT EACH JOINT OF PARAPET AND CORNICE; RE: 7/A3.2. SEALANT IS ALLOWED ONLY AT TOP JOINTS. ALL OTHER JOINTS TO BE REPOINTED SHALL BE DONE SO WITH REPOINTING MORTAR. SEE SPECIFICATIONS.
3. RESTORE EXISTING TERRA COTTA URN.
4. REPLACE TERRA COTTA CORNICE TO EXACTLY MATCH EXISTING IN SIZE, STYLE, AND PROFILE. RE: EAST ELEVATION.

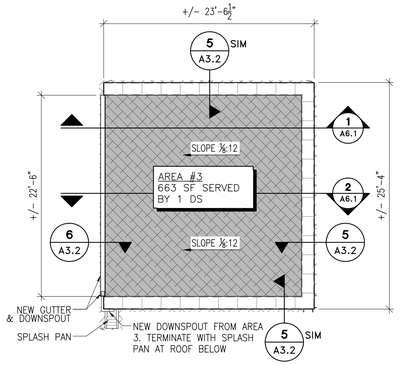
NOTE:
ALL TERRA COTTA REPLACEMENT MAY UTILIZE CEMENT CAST STUCCO TO MATCH THE SIZE, PROFILE, TEXTURE, AND COLOR OF REQUIRED PATCH AREAS. STUCCO CRAFTSMAN WHO HAVE AT LEAST FIVE PREVIOUS HISTORIC BUILDINGS UTILIZING THIS TECHNIQUE ARE REQUIRED FOR THIS WORK. SEE "RESTORATION BUILDING ENVELOPE NOTES" ON SHEET A5.2 FOR ADDITIONAL INFORMATION.

General Roof Repair Notes

1. DEMO EXISTING BUILT-UP ROOFING: REMOVE AND DISCARD ALL BUILT-UP ROOFING MATERIALS INCLUDING INSULATION, FLASHING, UNDERLAYMENT, AND ACCESSORIES TO EXPOSE THE ORIGINAL ROOF DECKING.
2. ROOF TOP EQUIPMENT: ALL ROOF TOP EQUIPMENT INCLUDING BUT NOT LIMITED TO HVAC EQUIPMENT, PIPING, AND CONDUIT HAS BEEN REMOVED DURING A RECENT DEMOLITION PROJECT. AREAS OF THE EXISTING ROOFING MEMBRANE HAVE BEEN TEMPORARILY PATCHED TO MAINTAIN WATER TIGHTNESS. ANY RESIDUAL ITEMS REMAINING DUE TO THE REMOVED ROOFTOP EQUIPMENT IS TO BE REMOVED WITH THE EXISTING BUILT-UP ROOF IN PREPARATION FOR INSTALLATION OF THE NEW ROOF.
3. REPAIR ROOF DECK: ANY REPAIRS TO DAMAGED OR MISSING AREAS OF ROOF DECKING SHALL BE MADE IN-KIND.
4. INSTALL NEW ROOFING SYSTEMS: INSTALL NEW 2-PLY MODIFIED BITUMINOUS ROOFING SYSTEM AS INDICATED IN THE ROOF ASSEMBLY NOTES AND WHERE SHOWN ON ROOF PLAN.
5. INSTALL NEW SCUPPERS AND DOWNSPOUTS WHERE SHOWN: REPLACE AND IN SOME CASES PROVIDE IN NEW LOCATIONS SCUPPERS, CONDUCTOR HEADS, DOWNSPOUTS, AND BOOTS AS SHOWN IN DRAWINGS. ALL CAST IRON BOOTS SHALL TIE DIRECTLY INTO UNDERGROUND STORM WATER DRAINAGE SYSTEM.

New Primary Roof Assembly

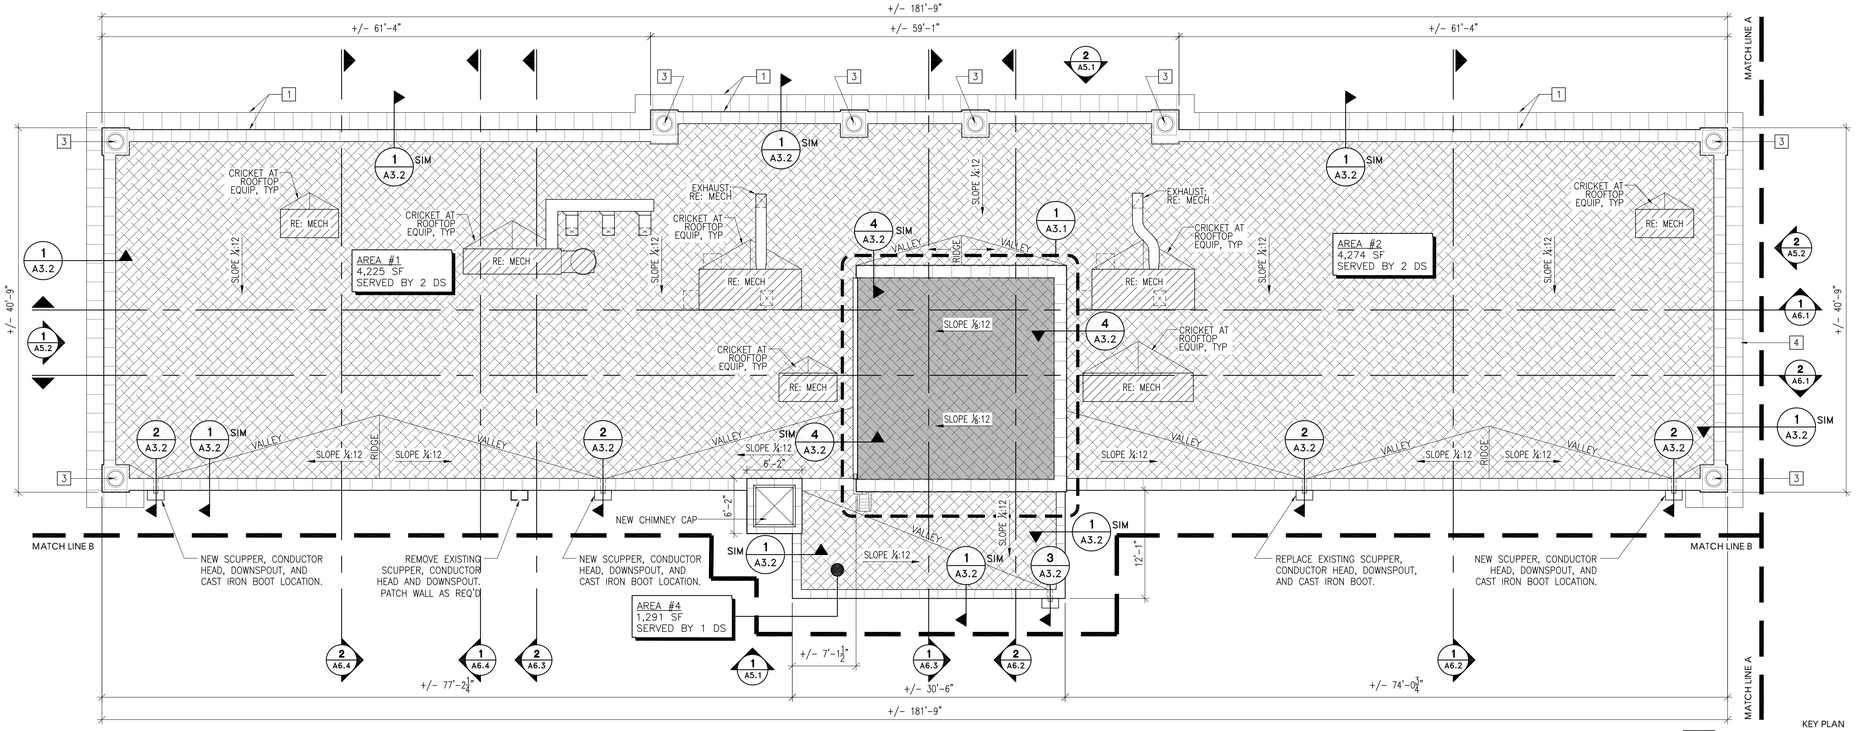
2-PLY REINFORCED SBS MODIFIED MEMBRANE ROOF SYSTEM



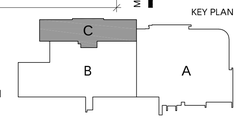
1. CAP SHEET (HEAT WELDED)
2. BASE PLY (MECHANICALLY ATTACHED)
3. 1/2" COVER BOARD
4. TAPERED ROOFING INSULATION (MIN. 1½" THICK & ¼":12 SLOPE)
5. 3" RIGID ROOFING INSULATION
6. VAPOR RETARDER / AIR BARRIER
7. EXISTING CONCRETE DECK

FASTENERS: GALVANIZED STEEL
FLASHING: METAL CLAD BITUMINOUS FLASHING
EXPOSED GUTTER: PRE-FINISHED ALUMINUM
DOWNSPOUTS: PRE-FINISHED ALUMINUM

Penthouse Roof Assembly



2-PLY REINFORCED SBS MODIFIED MEMBRANE ROOF SYSTEM



1. CAP SHEET (HEAT WELDED)
2. BASE PLY (MECHANICALLY ATTACHED)
3. 1/2" COVER BOARD
4. TAPERED ROOFING INSULATION (MIN. 1½" THICK & ¼":12 SLOPE)
5. VAPOR RETARDER / AIR BARRIER
6. EXISTING CONCRETE DECK

1. LAT CEILINGS SHALL BE CENTERED IN SPACE AS SHOWN. OVERSIZED TILES SHALL BE USED WHERE CEILING TILES MEASURE TO BE 6" OR LESS AT WALLS. CONTRACTOR TO SUBMIT LAYOUT TO ARCHITECT PRIOR TO CEILING GRID INSTALLATION.
2. SINGLE LIGHT FIXTURES IN CEILING ARE TO BE CENTERED IN SPACE UNLESS NOTED OTHERWISE.
3. TWO OR MORE CEILING FIXTURES IN A ROW ARE TO BE EQUALLY SPACED & CENTERED IN SPACE UNLESS NOTED OTHERWISE.
4. PROVIDE BLOCKING FOR ALL LIGHT FIXTURES & SECURELY FASTEN FIXTURES TO STRUCTURE.
5. PAINT ALL EXPOSED STRUCTURE IN SPACES WITHOUT CEILINGS OR WHERE EXPOSED; RE: FINISH CODES & FINISH SCHEDULE SHEET A8.1.
6. SEE MECHANICAL DRAWINGS FOR ANY MECHANICAL FIXTURES THAT MAY NOT BE SHOWN ON THIS PLAN.
7. SEE ELECTRICAL DRAWINGS FOR ANY ELECTRICAL FIXTURES THAT MAY NOT BE SHOWN ON THIS PLAN.
8. LIGHT FIXTURE TAGS REFERENCE THE FIXTURES LISTED ON THE LIGHT FIXTURE SCHEDULE IN THE ELECTRICAL DRAWINGS.
9. A MOCK-UP OF EACH PENDANT LIGHT FIXTURE TYPE AT EACH VARYING CEILING HEIGHT SHALL BE REVIEWED AND APPROVED BY ARCHITECT FOR LENGTH OF DROP PRIOR TO INSTALLATION.

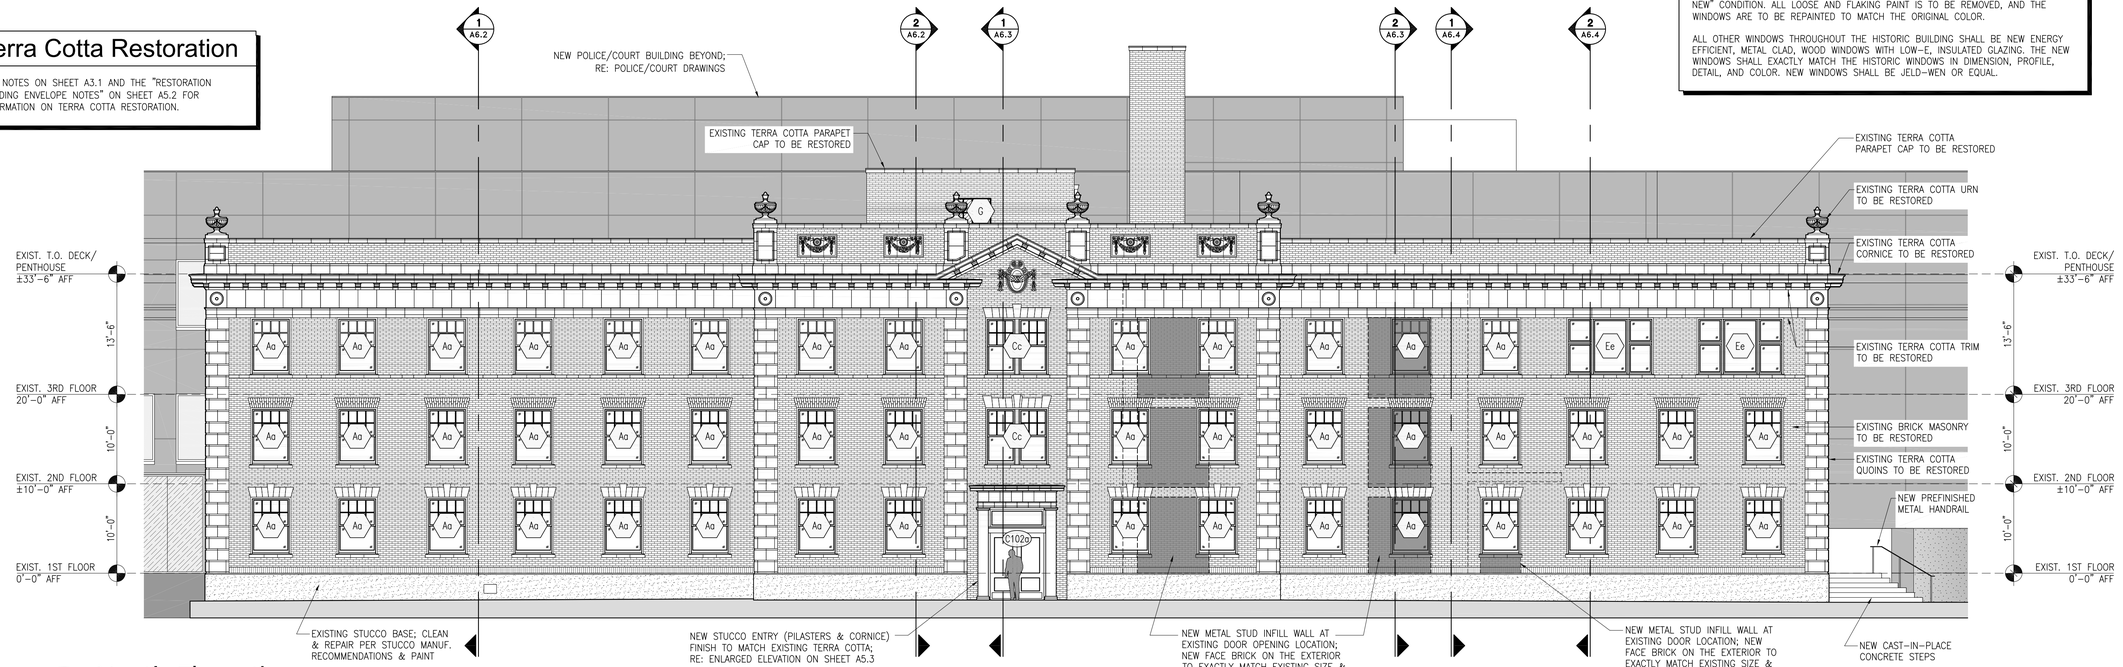
THIRD FLOOR REFLECTEI CEILING PLAN



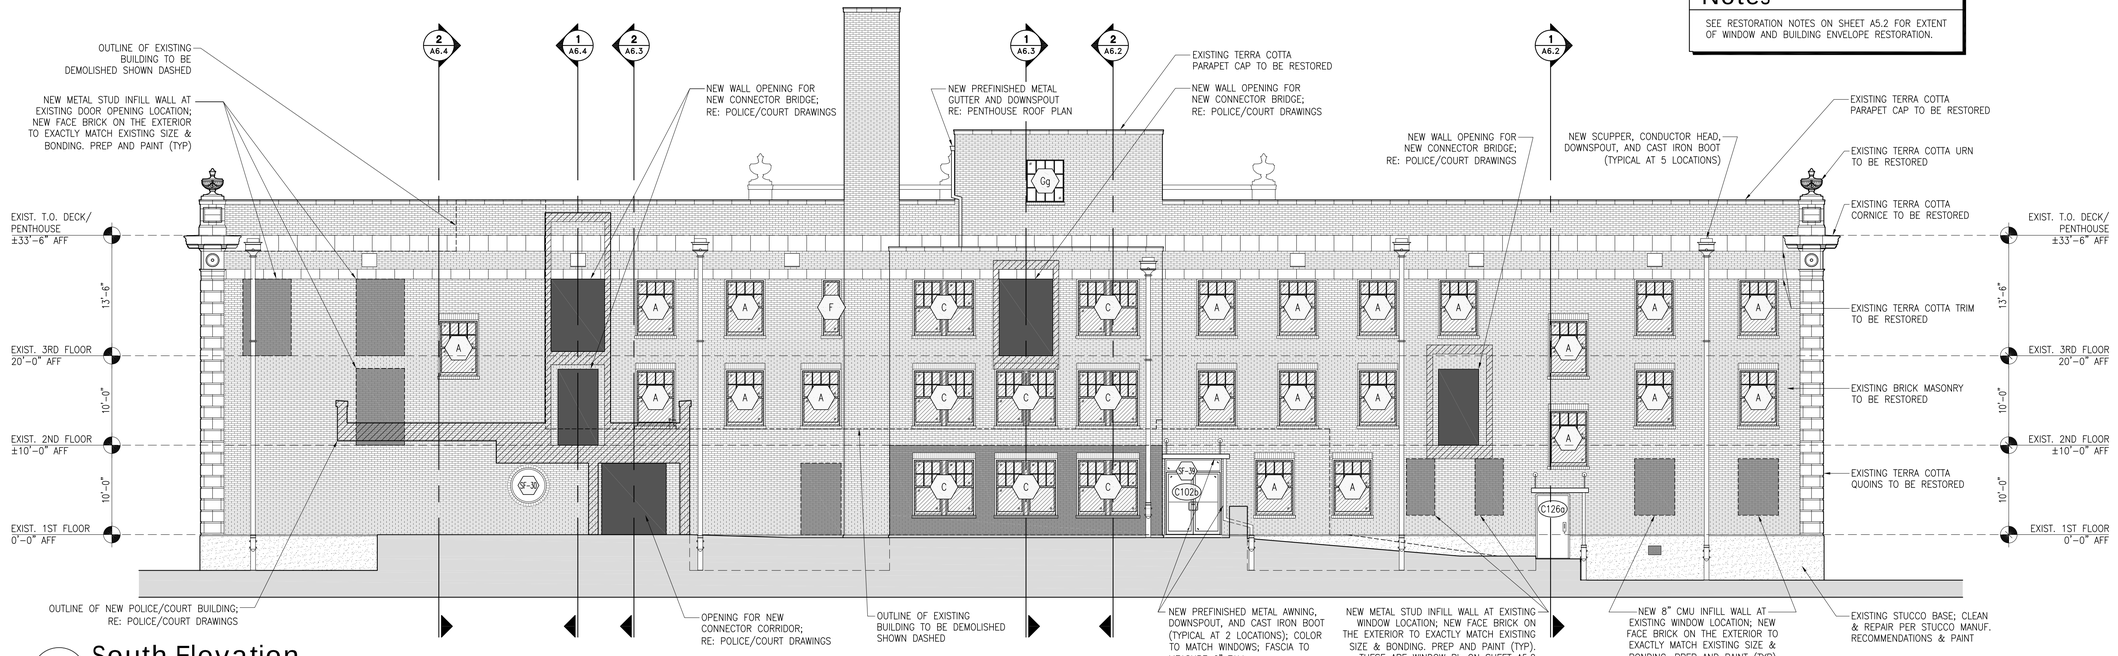
Terra Cotta Restoration

SEE NOTES ON SHEET A3.1 AND THE "RESTORATION BUILDING ENVELOPE NOTES" ON SHEET A5.2 FOR INFORMATION ON TERRA COTTA RESTORATION.

Existing & New Windows Note

THE NORTH FACADE OF THE HISTORIC HOSPITAL IS TO FEATURE THE ORIGINAL WOODEN WINDOWS THROUGHOUT. OPENINGS WHERE THE ORIGINAL WINDOWS HAVE BEEN REMOVED, OR ELEMENTS OF WINDOWS ARE DAMAGED BEYOND REPAIR, SHALL BE FILLED OR REPAIRED WITH SALVAGED WINDOWS FROM THE OTHER FACADES OF THE BUILDING. ALL HISTORIC WINDOWS ON THIS FACADE ARE TO BE RESTORED TO A "LIKE NEW" CONDITION. ALL LOOSE AND FLAKING PAINT IS TO BE REMOVED, AND THE WINDOWS ARE TO BE REPAINTED TO MATCH THE ORIGINAL COLOR.

ALL OTHER WINDOWS THROUGHOUT THE HISTORIC BUILDING SHALL BE NEW ENERGY EFFICIENT, METAL CLAD, WOOD WINDOWS WITH LOW-E, INSULATED GLAZING. THE NEW WINDOWS SHALL EXACTLY MATCH THE HISTORIC WINDOWS IN DIMENSION, PROFILE, DETAIL, AND COLOR. NEW WINDOWS SHALL BE JELD-WEN OR EQUAL.



2 North Elevation

SCALE: 1/8" = 1'-0"

NORTH & SOUTH BUILDING ELEVATIONS

Restoration Window General Notes

1. THE NORTH FACADE OF THE HISTORIC HOSPITAL IS TO FEATURE THE ORIGINAL WOODEN WINDOWS THROUGHOUT. OPENINGS WHERE THE ORIGINAL WINDOWS HAVE BEEN REMOVED, OR ELEMENTS OF WINDOWS ARE DAMAGED BEYOND REPAIR, SHALL BE FILLED OR REPAIRED WITH SALVAGED WINDOWS FROM THE OTHER FACADES OF THE BUILDING.
2. CONTRACTOR AND SUBS SHALL BE FAMILIAR WITH ALL GENERAL NOTES LOCATED ON SHEET T1.1.
3. CONTRACTOR SHALL PAY VERY CLOSE ATTENTION TO FIELD CONDITIONS DURING BIDDING TO ENSURE THAT ALL CONDITIONS ARE ACCOUNTED FOR AT THAT TIME. OMISSIONS AND ERRORS SHALL BE BROUGHT TO THE ARCHITECT'S ATTENTION FOR CLARIFICATION PRIOR TO BIDDING.
4. THE CONTRACTOR SHALL PROVIDE ONE FULLY COMPLETED SAMPLE OF EACH OF THE FOLLOWING: ONE RESTORED WINDOW* AND ONE NEW WINDOW* FOR REVIEW BY THE ARCHITECT AND A REPRESENTATIVE FROM THE MISSISSIPPI DEPARTMENT OF ARCHIVES AND HISTORY PRIOR TO PROCEEDING ON WINDOW* RESTORATION AND REPLACEMENT. CONTRACTOR SHALL FINISH AND GLAZE BOTH SIDES OF EACH SAMPLE UNIT AS SCHEDULED. THE CONTRACTOR SHALL COORDINATE THIS REVIEW WITH THE EXTERIOR ENVELOPE RESTORATION REVIEW AND GIVE THE ARCHITECT A 5 DAY MINIMUM NOTICE AS TO WHEN THE REVIEW WILL OCCUR.
5. WINDOWS* VARY IN SIZE FROM UNIT TO UNIT. DIMENSIONS ARE PROVIDED AS ESTIMATES ONLY. NEW WINDOWS* SHALL BE SIZED TO FIT EXISTING ROUGH OPENINGS AND SHALL BE FABRICATED USING AN EXISTING SAMPLE AS APPROVED BY THE ARCHITECT.
6. ALL SURFACES THAT ARE TO REMAIN SHALL BE STRIPPED OF PAINT, VARNISH AND OTHER FINISHES AND COATINGS TO PROVIDE AN ADEQUATE SUBSTRATE FOR NEW PAINT. CONTRACTOR SHALL TAKE GREAT CARE NOT TO DAMAGE THE WINDOW* IN THE PROCESS AND SHALL REPLACE ANY DAMAGED WOOD WITH NEW WOOD TO EXACTLY MATCH AT THE CONTRACTOR'S EXPENSE.
7. CONTRACTOR SHALL PROTECT ALL ADJACENT SURFACES INCLUDING BRICK AND TERRA COTTA WHILE STRIPPING WINDOW* SURFACES. ANY DAMAGE CAUSED TO ADJACENT MATERIALS SHALL BE REPAIRED AT THE CONTRACTOR'S EXPENSE.
8. ALL EXTERIOR SURFACES EXPOSED TO THE WEATHER SHALL BE PAINTED AS SPECIFIED TO PRODUCE A LIKE NEW CONDITION. ALL INTERIOR SURFACES NOT EXPOSED TO THE WEATHER SHALL BE PREPPED AND PAINTED AS SCHEDULED.
9. CONTRACTOR SHALL GLAZE ALL LITES IN WINDOWS*. CONTRACTOR SHALL REPLACE ALL MISSING OR BROKEN GLASS AS INDICATED IN DRAWINGS. IF CONTRACTOR BREAKS ANY ORIGINAL GLASS, CONTRACTOR SHALL REPLACE THE BROKEN GLASS WITH RESTORATION GLASS OF THE EXACT SAME TYPE AT CONTRACTOR'S EXPENSE.
10. REMOVE ALL EXTRANEOUS ATTACHMENTS, PROTRUSIONS, PENETRATIONS, PIPES, FANS, GRILLES, BARS, SCREEN STOPS, SCREEN HINGES, AND MISC. HARDWARE IN, ON, AND AROUND WINDOWS*. PATCH AND REPAIR AS REQUIRED.
11. REMOVE AND REPLACE ALL DEFECTIVE CAULK AND SEALANT AS REQUIRED TO PROVIDE A WATERTIGHT FINISH.

*'WINDOW' REFERS TO THE ENTIRE UNIT INCLUDING FRAMES, SASHES, MULLIONS, MOLDINGS, AND TRIM.

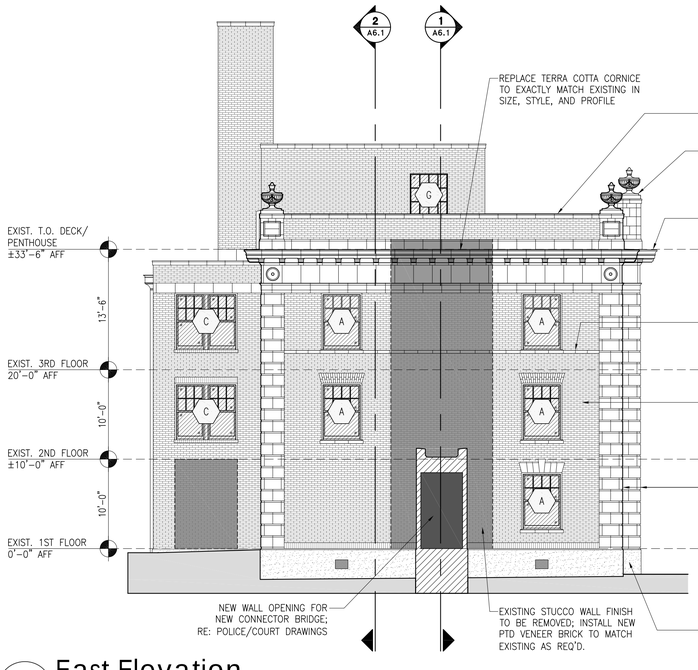
Restoration Window Notes

1. CONTRACTOR SHALL VERIFY CONDITION OF EXISTING WINDOWS SCHEDULED TO BE RESTORED PRIOR TO BIDDING TO ENSURE THAT WINDOW CAN BE FULLY RESTORED AND NOTIFY THE ARCHITECT IF ANY WINDOW NEEDS TO BE FULLY REPLACED.
2. CONTRACTOR SHALL VERIFY CONDITION OF EXISTING WINDOWS SCHEDULED TO BE DEMOLISHED PRIOR TO BIDDING AND NOTIFY THE ARCHITECT OF ANY EXISTING WINDOW FRAMES THAT CAN BE SALVAGED FOR RESTORATION.
3. ALL EXISTING WINDOW TYPES 'Aa, Cc, Ee, Ff, & Gg' SHALL BE FULLY RESTORED; REMOVE AND DISPOSE OF ANY OPAQUE (WOOD OR METAL) PANELS IN WINDOWS AND REPLACE WITH TEMPERED GLASS. REMOVE ALL LOOSE MATERIAL AND CHIPPING PAINT, PREPARE SURFACE AND PAINT (PT-4).
4. ALL NEW WINDOW TYPES 'A, C, D, E, & G': REMOVE AND DISPOSE OF ANY EXISTING WINDOWS WHERE DAMAGE OR WEAR IS EXTENSIVE TO WARRANT FULL REPLACEMENT. RESTORE ORIGINAL WINDOW OPENING (AS NECESSARY) AND INSTALL NEW WINDOW AS SCHEDULED. PREPARE SURFACE AND PAINT (PT-4).
5. EXISTING WINDOW TYPE 'Bb' SHALL BE DEMOLISHED IN ITS ENTIRETY. INFILL OPENING ON THE INTERIOR WITH GYP. BD. ON METAL STUDS AT 16" O.C. FILLED WITH BATT INSULATION AND PAINT AS SCHEDULED. INFILL OPENING ON THE EXTERIOR WITH NEW BRICK TO EXACTLY MATCH ADJACENT CONDITION.

Restoration Building Envelope Notes

1. CONTRACTOR AND SUBS SHALL BE FAMILIAR WITH ALL GENERAL NOTES LOCATED ON SHEET T1.1.
2. CONTRACTOR SHALL PAY VERY CLOSE ATTENTION TO FIELD CONDITIONS DURING BIDDING TO ENSURE THAT ALL CONDITIONS ARE ACCOUNTED FOR AT THAT TIME. OMISSIONS AND ERRORS SHALL BE BROUGHT TO THE ARCHITECT'S ATTENTION FOR CLARIFICATION PRIOR TO BIDDING.
3. THE CONTRACTOR SHALL PROVIDE A FULLY COMPLETED 4'X4' MOCK-UP OF MASONRY (INCLUDING PAINTING) AND TERRA COTTA RESTORATION AND REPOINTING AS SPECIFIED FOR REVIEW BY THE ARCHITECT AND A REPRESENTATIVE FROM THE MISSISSIPPI DEPARTMENT OF ARCHIVES AND HISTORY PRIOR TO PROCEEDING WITH RESTORATION. THE CONTRACTOR SHALL COORDINATE THIS REVIEW WITH THE WINDOW SAMPLE REVIEW AND GIVE THE ARCHITECT A 5 DAY MINIMUM NOTICE AS TO WHEN THE REVIEW WILL OCCUR.
4. ALL EXISTING BRICK MASONRY WITH DAMAGED OR MISSING SKIM COAT SHALL BE PATCHED AND REPAIRED WITH NEW SKIM COAT TO PROVIDE A SMOOTH SURFACE. ANY DAMAGED OR MISSING BRICK SHALL BE REPLACED WITH NEW BRICK TO MATCH EXISTING.
5. ALL BRICK MASONRY SHALL BE THOROUGHLY CLEANED AND RESTORED TO A LIKE NEW CONDITION USING THE GENTLEST METHODS POSSIBLE. REPAIR AND REPOINT ALL AREAS WHERE CRACKS, SPACES, GAPS, AND HOLES OCCUR. ALL BRICK MASONRY SURFACES SHALL BE PREPPED AND PAINTED AS SPECIFIED. REVIEW ALL GENERAL NOTES AND SPECS AND PROVIDE SAMPLES PRIOR TO BEGINNING WORK.
6. ALL TERRA COTTA SHALL BE THOROUGHLY CLEANED AND RESTORED TO A LIKE NEW CONDITION USING THE GENTLEST MEANS POSSIBLE. THIS INCLUDES BUT IS NOT LIMITED TO SILLS, DRIPS, PARAPETS, COPINGS, SURROUNDS, ORNAMENT, AND SURFACES. REPAIR AND REPOINT ALL AREAS WHERE CRACKS, SPACES, GAPS, AND HOLES OCCUR. REVIEW ALL GENERAL NOTES AND SPECS AND PROVIDE SAMPLES PRIOR TO BEGINNING WORK. SEE ROOF PLAN SHEET A3.1 FOR ADDITIONAL INFORMATION AND SPECIFIC TERRA COTTA KEYED NOTES. ALL TERRA COTTA REPLACEMENT MAY UTILIZE CEMENT CAST STUCCO TO MATCH THE SIZE, PROFILE, TEXTURE, AND COLOR OF REQUIRED PATCH AREAS. STUCCO CRAFTSMAN WHO HAVE AT LEAST FIVE PREVIOUS HISTORIC BUILDINGS UTILIZING THIS TECHNIQUE ARE REQUIRED FOR THIS WORK.
7. REMOVE ALL MISC. OBJECTS ATTACHED TO THE BUILDING THAT ARE NOT PART OF THE ORIGINAL STRUCTURE. THIS INCLUDES BUT IS NOT LIMITED TO MECHANICAL AND ELECTRICAL EQUIPMENT, DEVICES, PIPES OR VENTS PENETRATING THE EXTERIOR ENVELOPE. REPAIR ANY DAMAGE CAUSED TO THE ENVELOPE CAUSED BY THE ATTACHMENT OF THE OBJECT BY REPLACING OR REPAIRING THE DAMAGED BRICK OR TERRA COTTA.

Restoration Window Schedule & Elevations



SCALE: 3/8" = 1'-0"

THE NORTH FACADE OF THE HISTORIC HOSPITAL IS TO FEATURE THE ORIGINAL WOODEN WINDOWS THROUGHOUT. OPENINGS WHERE THE ORIGINAL WINDOWS HAVE BEEN REMOVED, OR ELEMENTS OF WINDOWS ARE DAMAGED BEYOND REPAIR, SHALL BE FILLED OR REPAIRED WITH SALVAGED WINDOWS FROM THE OTHER FACADES OF THE BUILDING. ALL HISTORIC WINDOWS ON THIS FACADE ARE TO BE RESTORED PER THE RESTORATION WINDOW NOTES TO A "LIKE NEW" CONDITION. ALL OTHER WINDOWS THROUGHOUT THE HISTORIC BUILDING SHALL BE NEW ENERGY EFFICIENT, METAL CLAD, WOOD WINDOWS WITH LOW-E, INSULATED GLAZING. THE NEW WINDOWS SHALL EXACTLY MATCH THE HISTORIC WINDOWS IN DIMENSION, PROFILE, DETAIL, AND COLOR. NEW WINDOWS SHALL BE JELD-WEN OR EQUAL.

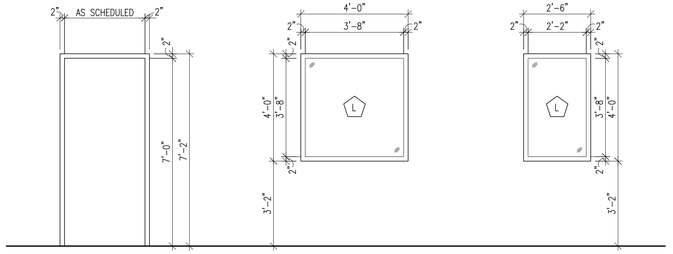
DOOR REMARKS

1. SEE STOREFRONT MFR FOR MFR DETAILS.
2. DOOR TO HAVE ALARMED EXIT DEVICE W/ CARD READER OVERRIDE.
3. STOREFRONT TO BE TRIFAB VG 451 BY KAWNEER OR EQUAL (EXTERIOR APPLICATION) WITH 2" SIGHT LINE; 4½" FRAME DEPTH; ANODIZED ALUMINUM FINISH FRONT PLANE, OUTSIDE GLAZED.
4. STOREFRONT TO BE TRIFAB 450 KAWNEER OR EQUAL (INTERIOR APPLICATION) WITH 1¾" SIGHT LINE; 4½" FRAME DEPTH; ANODIZED ALUMINUM FINISH FRONT PLANE, OUTSIDE GLAZED.
5. DOOR AND FRAME EQUAL TO DETENTION SECURITY HOLLOW METAL DOOR AND FRAME BY TRUSSBILT.

DOOR GENERAL NOTES



A. CAREFULLY FIELD MEASURE AND VERIFY ALL OPENINGS BEFORE ASSEMBLY OF PRODUCTS.
B. SEE DOOR ELEVATIONS AND DETAILS FOR THICKNESS, DIMENSIONS AND GENERAL CONSTRUCTION.
C. PAINT ALL TOPS AND BOTTOMS OF STEEL DOORS THAT ARE EXPOSED TO WEATHER.
D. PROVIDE FULL WIDTH MARBLE THRESHOLDS AT BATHROOM DOORS.
E. ALL HOLLOW METAL FRAMES ARE TO BE FIELD PAINTED. COLOR TO BE SELECTED.
F. ALL GLASS IN INTERIOR WALL FRAMING AND DOORS WILL BE TEMPERED GLASS.
G. REFER TO SPECIFICATIONS FOR DOOR HARDWARE.

NOTE FOR DOOR TYPES WD-3 & WD-4:
REPLICATE HISTORIC WOODEN ENTRY DOORS AS DEPICTED ON SHEET A5.3. DOORS, TRANSOM, AND WINDOW ABOVE SHALL BE STAIN GRADE WOOD; STAIN COLOR TO BE SELECTED BY ARCHITECT. ALL DOOR HARDWARE SHALL BE HISTORICALLY ACCURATE WITH A BRONZE FINISH. KICK PLATES AT DOOR TYPE WD-4 SHALL BE BRONZE.

REGISTERED ARCHITECT Larry M Albert Hattiesburg, MS STATE OF MISSISSIPPI

A7.2

Finish Sched. Gen. Notes

1. CONTRACTOR TO CONSULT ARCHITECT IMMEDIATELY IF DISCREPANCIES ARE FOUND BETWEEN ARCHITECTURAL AND ENGINEERING DRAWINGS
2. SEE A2.x SHEETS FOR FLOOR PLANS.
3. SEE A3.x SHEETS FOR ROOF PLANS.
4. SEE A4.x SHEETS FOR REFLECTED CEILING PLANS.
5. SEE A5.x SHEETS FOR EXTERIOR ELEVATIONS AND WINDOW SCHEDULE/WINDOW ELEVATIONS.
6. SEE A6.x SHEETS FOR BUILDING SECTIONS.
7. SEE A7.x SHEETS FOR DOOR SCHEDULE/FRAME ELEVATIONS.
8. SEE A8.x SHEETS FOR FINISH SCHEDULE AND FINISH FLOOR PLANS.
9. SEE A9.x SHEETS FOR INTERIOR ELEVATIONS.

General Finish Notes

1. ALL FLOORS TO BE PROPERLY PREPPED AND FLOATED AS NECESSARY.
2. ALL EXPOSED LOUVERS, REGISTERS, VENTS, ETC. ARE TO BE PAINTED TO MATCH SURROUNDING CONDITIONS.
3. AT ALL FLOORING PRODUCT TRANSITIONS, PROVIDE NECESSARY ACCESSIBLE TRANSITION MATERIALS. RE: SHEET A8.2 FOR THRESHOLD/FLOORING TRANSITION DETAILS.
4. ALL PORCELAIN TILE FLOORING TO MEET OR EXCEED STATIC COEFFICIENT OF FRICTION (SLIP RESISTANCE) A.D.A. STANDARD OF 0.60 FOR ACCESSIBLE ROUTES.
5. APPLY THOROUGH WATERPROOFING MASTIC BEHIND ALL WALL TILE, FLOOR TILE, AND CURB TILE IN RESTROOMS.
6. ALL EXPOSED STEEL IS TO BE PRIMED AND PAINTED PER SECTION 9 SPECIFICATIONS; INCLUDING BUT NOT LIMITED TO: STAIRS INCLUDING HANDRAILS, STRINGERS, STAIR PANS, ETC.
7. SUBMIT COLOR SAMPLES FOR ALL PRODUCTS TO ARCHITECT FOR APPROVAL.

Numbered Finish Notes

1. MULTIPLE WALL FINISHES ARE USED IN THIS SPACE; SEE INTERIOR ELEVATIONS FOR PATTERNS AND LOCATIONS OF FINISHES.
2. MULTIPLE CEILING FINISHES ARE USED IN THIS SPACE; SEE REFLECTED CEILING PLANS FOR PATTERNS AND LOCATIONS OF FINISHES.
3. THIS SPACE CONTAINS FINISHED MILLWORK; SEE INTERIOR ELEVATIONS FOR FINISHES.
4. PROVIDE PLEXIGLASS WALL COVERING TO A HEIGHT OF 4'-0" AFF AND HORIZONTALLY 4'-0" FROM THE EDGE OF THE NEAREST WATER SOURCE.
5. MULTIPLE CEILING HEIGHTS EXIST IN THIS SPACE; SEE REFLECTED CEILING PLANS FOR HEIGHTS.
6. PROVIDE RETROFIT ALUMINUM STAIR NOSING BY BALCO OR EQUAL; TYPE RS-405LP IN 4 INCH WIDTH WITH TYPE 7 CAST-IN ANCHOR. PROVIDE AT EXISTING CONCRETE STAIRS.
7. PROVIDE EMBEDDED ALUMINUM STAIR NOSING BY BALCO OR EQUAL; TYPE T-213 IN 2 INCH WIDTH WITH TYPE 6 CAST-IN ANCHOR. PROVIDE AT NEW CONCRETE STAIR AT STAIR #C2.
8. ALL EXPOSED STRUCTURE AT CEILING (DECKS, BEAMS, STAIRS, ETC.) IS TO BE STRIPPED OF ALL LOOSE MATERIAL & CHIPPING PAINT, SURFACES PREPPED AND TEXTURED WITH STIPPLED PLASTER FINISH AND PAINTED.
9. SMOOTH, HARD, NONABSORBENT SURFACE NOT REQUIRED IN THIS RESTROOM AT SERVICE SINKS, URINALS, AND WATER CLOSETS PER IBC 2012, 1210.2.2, EXCEPTION #2.
10. SMOOTH, HARD, NONABSORBENT SURFACE REQUIRED AT ALL WALLS AND PARTITIONS WITHIN 2 FEET OF SERVICE SINKS, URINALS, AND WATER CLOSETS TO A HEIGHT NOT LESS THAN 48 INCHES ABOVE FLOOR PER IBC 2012, 1210.2.2.
11. SEE INTERIOR ELEVATIONS FOR SURFACE MOUNTED MIRROR LOCATIONS.
12. PROVIDE 1 HOUR RATED GYP. BD. CEILING ASSEMBLY (BASIS OF DESIGN UL G531).
13. THIS SPACE IS MARKED AS FUTURE AND WILL HAVE NO NEW FLOOR FINISH AT THIS TIME. CONTRACTOR SHALL LEAVE THE EXISTING RAW FLOOR FINISH AFTER DEMO WORK IN THIS SPACE IS COMPLETED AND EXISTING FLOOR CLEANED.
14. THIS SPACE HAS TWO OPENINGS IN THE CEILING THAT ARE OPEN TO THE THIRD FLOOR; CONTRACTOR SHALL FURR-OUT SIDES OF OPENING WITH GYP. BD. AND PAINT (PT-4). SEE REFLECTED CEILING PLANS FOR LOCATIONS AND SIZE OF OPENINGS.
15. PROVIDE NEW SHIPS LADDER AT FOR PENTHOUSE ACCESS. SEE SPECIFICATION SECTION 055133.
16. PROVIDE TRANSLUCENT GLAZING AT WINDOWS LOCATED IN RESTROOMS.

SCALE: Not To Scale

Penthouse Floor Finish Plan

SCALE: 3/32" = 1'-0"

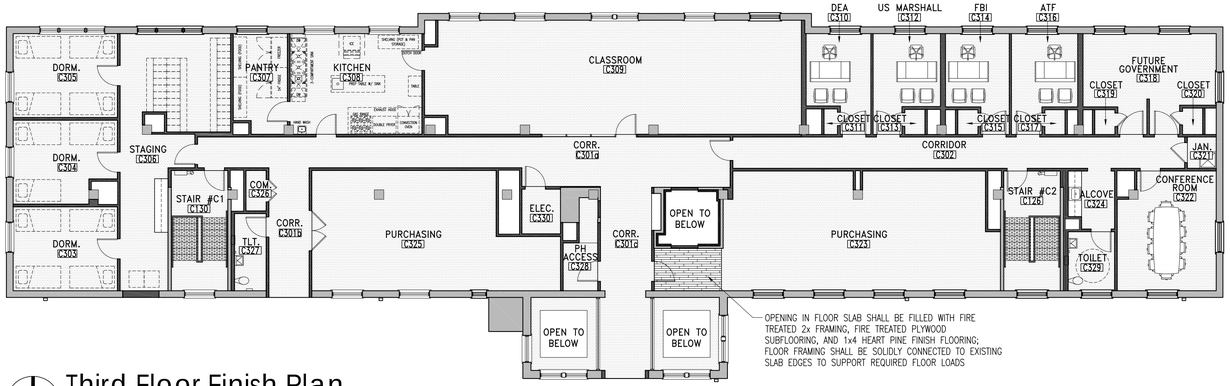
Existing Floor Finish Note

THE ORIGINAL FLOOR FINISHES EXISTS THROUGHOUT ALL FLOORS OF THE HISTORIC HOSPITAL BUILDING, AND GREAT CARE WAS TAKEN THROUGHOUT THE SELECTIVE DEMOLITION OF THE BUILDING'S INTERIOR TO PROTECT THESE FINISHES IN PLACE. ALL FLOORS ARE TERRAZZO WITH THE EXCEPTION OF ONE SMALL AREA OF BLACK AND WHITE, CHECKERBOARD MARBLE TILE AT THE PRIMARY ENTRANCE OF THE FIRST FLOOR; SEE ADJACENT FINISH FLOOR PLANS. THE ORIGINAL TERRAZZO FIELD COLOR IS A LIGHT TERRAZZO WITH A HEAVILY VARIEGATED AGGREGATE, WHILE THE ORIGINAL CORRIDORS OF THE BUILDING FEATURED A DARK TERRAZZO BAND ALONG THEIR PERIMETERS. ALL EXISTING FLOORING IS TO REMAIN IN PLACE, BE CLEANED APPROPRIATELY FOR THEIR TYPE, AND RESTORED TO A LIKE NEW CONDITION.

THERE ARE NUMEROUS LOCATIONS THROUGHOUT THE BUILDING WHERE PORTIONS OF THE TERRAZZO FLOORING IS MISSING DUE TO TWO PRIMARY CAUSES: 1. VARIOUS HOLES THROUGH THE FLOOR SLABS FOR MECHANICAL AND PLUMBING LINES/CHASES AND 2. VARIOUS TRENCHES EXTENDING THE FULL DEPTH OF THE TERRAZZO FINISH WHERE THE ORIGINAL INTERIOR PARTITIONS WERE LOCATED. IN LOCATIONS WHERE HOLES EXIST IN THE FLOOR SLABS THAT WILL NOT BE CONCEALED BY THE NEW CONSTRUCTION, THE CONCRETE SLABS MUST BE PATCHED FOR APPLICATION OF NEW FINISHED FLOORING. THE TRENCHES CAUSED THE ORIGINAL INTERIOR PARTITIONS RUNNING PARALLEL TO THE CORRIDOR OCCUR WITHIN THE DARK TERRAZZO PERIMETER BAND; THESE ARE TO BE PATCHED TO MATCH THE ORIGINAL DARK TERRAZZO COLOR AS CLOSELY AS POSSIBLE. ALL OTHER TRENCHES DUE TO THE ORIGINAL INTERIOR PARTITIONS ARE LOCATED IN A LIGHT TERRAZZO FIELD COLOR; THE COLOR OF THE PATCHING TERRAZZO IS NOT TO MATCH THIS EXISTING COLOR IN THESE LOCATIONS. THE LIGHT TERRAZZO PATCH COLOR IS TO BE A SIMILAR BUT SUBTLY DIFFERENT COLOR.

ALL INITIAL REPAIR TERRAZZO MIXES ARE TO BE PREPARED ON-SITE WITH THE ARCHITECT PRESENT FOR REVIEW OF COLORS TO MATCH/COMPLEMENT THE EXISTING TERRAZZO FINISHES. THE INSTALLER MUST BE ABLE TO ADJUST COLORS ON-SITE AS REQUIRED TO PRODUCE AN APPROPRIATE MIXTURE TO RECEIVE AN APPROVAL OF THE REQUIRED COLORS. ONCE COLORS HAVE BEEN APPROVED, A MOCKUP OF THE TERRAZZO PATCHING FOR ALL COLORS SHALL BE PROVIDED IN AN INCONSPICUOUS LOCATION, AS DIRECTED BY ARCHITECT, FOR APPROVAL OF THE FINISHED PRODUCT BEFORE WORK BEGINS ON THE REMAINING TERRAZZO REPAIRS.

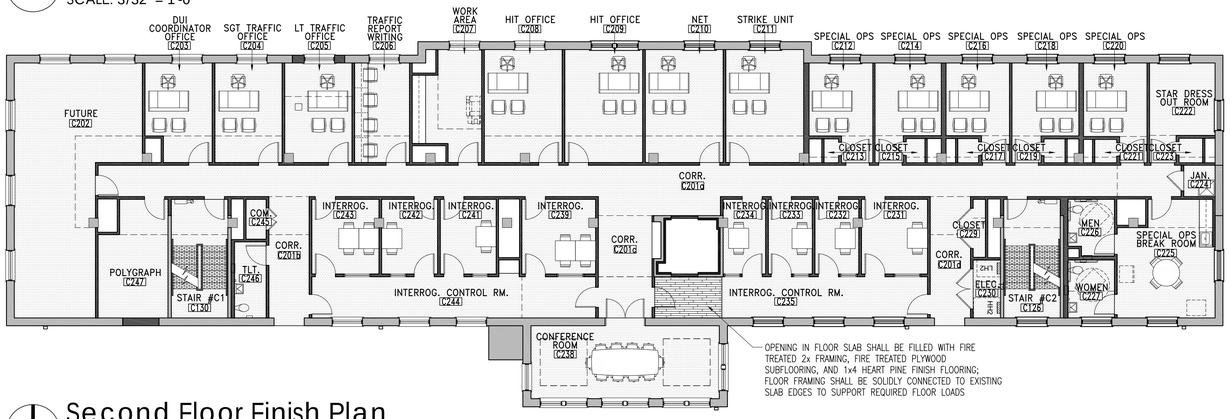
Finish Floor Plan Legend



- EXISTING TERRAZZO FLOOR FINISH (SEE EXISTING FLOOR FINISH NOTE ON THIS SHEET)
- EXISTING MARBLE FLOOR FINISH (SEE EXISTING FLOOR FINISH NOTE ON THIS SHEET)
- RF-6 – RUBBER STAIR TREADS

General Finish Notes

1. ALL FLOORS TO BE PROPERLY PREPPED AND FLOATED AS NECESSARY.
2. ALL EXPOSED LOUVERS, REGISTERS, VENTS, ETC. ARE TO BE PAINTED TO MATCH SURROUNDING CONDITIONS.
3. AT ALL FLOORING PRODUCT TRANSITIONS, PROVIDE NECESSARY ACCESSIBLE TRANSITION MATERIALS. SEE THIS SHEET FOR THRESHOLD/FLOORING TRANSITION DETAILS.
4. ALL PORCELAIN TILE FLOORING TO MEET OR EXCEED STATIC COEFFICIENT OF FRICTION (SLIP RESISTANCE) A.D.A. STANDARD OF 0.60 FOR ACCESSIBLE ROUTES.
5. APPLY THOROUGH WATERPROOFING MASTIC BEHIND ALL WALL TILE, FLOOR TILE, AND CURB TILE IN RESTROOMS.
6. ALL EXPOSED STEEL IS TO BE PRIMED AND PAINTED PER SECTION 9 SPECIFICATIONS; INCLUDING BUT NOT LIMITED TO: STAIRS INCLUDING HANDRAILS, STRINGERS, STAIR PANS, ETC.
7. SUBMIT COLOR SAMPLES FOR ALL PRODUCTS TO ARCHITECT FOR APPROVAL.



General Plan Notes

1. CONTRACTOR TO CONSULT ARCHITECT IMMEDIATELY IF DISCREPANCIES ARE FOUND BETWEEN ARCHITECTURAL AND ENGINEERING DRAWINGS
2. SEE A2.x SHEETS FOR FLOOR PLANS.
3. SEE A3.x SHEETS FOR ROOF PLANS.
4. SEE A4.x SHEETS FOR REFLECTED CEILING PLANS.
5. SEE A5.x SHEETS FOR EXTERIOR ELEVATIONS AND WINDOW SCHEDULE/WINDOW ELEVATIONS.

GENERAL NOTES:

1 CONTRACTOR IS RESPONSIBLE FOR COORDINATING ALL PLUMBING AND FIRE PROTECTION INSTALLATIONS WITH OTHER TRADES SUCH AS ELECTRICAL, STRUCTURAL, HVAC, LIGHTING, CEILING CONSTRUCTION AND SUPPORTS, ETC. ANY CONFLICTS ARISING OUT OF A LACK OF CONSTRUCTION COORDINATION OR DUE TO LACK OF CONSIDERATION FOR THE NEEDS OF OTHER TRADES SHALL BE RESOLVED AT NO EXPENSE TO THE OWNER.

2 ALL PIPING SHALL BE INSTALLED IN SUCH A MANNER THAT CONFLICTS WITH AIR CONDITIONING DUCTS AND WITH CEILING LIGHTS WILL NOT OCCUR. IN SOME INSTANCES, WHERE INDICATED, PIPING SHALL BE INSTALLED WITH SLEEVES THROUGH BEAMS. CONTRACTOR SHALL BE RESPONSIBLE FOR FURNISHING THE SIZES OF SLEEVES AND THE ELEVATIONS AT WHICH OPENINGS ARE TO BE MADE PRIOR TO INSTALLATION OF STRUCTURAL MEMBERS.

3 FOR EVERY PIPE SLEEVE PENETRATING FIRE RATED WALLS AND SLABS, USE 3M OR EQUIVALENT FIRE BARRIER WRAP STRIP FS-165, 3M CAULK CP 25 AND 3M PUTTY 303, ASTM E-814, U.L. LISTED, CAPABLE OF RAPID EXPANSION WHEN EXPOSED TO HEAT. COMPLIES WITH BOCA, ICBO AND SSBC. PROVIDES 3 HOUR FIRE RATING.

4 ALL SANITARY AND STORM DRAINAGE PIPING SHALL BE INSTALLED AT 1/8" PER FOOT SLOPE UNLESS OTHERWISE NOTED. FIXTURE ARMS AND SMALL BRANCHES SHALL BE SLOPED IN ACCORDANCE WITH THE STANDARD PLUMBING CODE.

5 PROVIDE ACCESS PANELS FOR SHOCK ABSORBERS, VALVES AND CLEANOUT COVERS FOR CLEANOUT PLUGS AS SPECIFIED. EACH ITEM SHALL BE PROVIDED WITH ITS ACCESS PANEL OR COVER. ACCESS PANELS AND CLEANOUT COVERS SHALL BE EASILY ACCESSIBLE AND CONTRACTOR WILL BE RESPONSIBLE FOR LOCATING THESE ITEMS SO THAT SHOCK ABSORBER, VALVE OR CLEANOUT LIES WITHIN WALL OR CEILING IMMEDIATELY BEHIND COVER OR PANEL. CONTRACTOR SHALL COORDINATE THE LOCATION OF PANELS AND COVERS WITH OTHER TOILET ACCESSORIES AND FIXTURES AS WELL AS ARCHITECTURAL LAYOUT.

6 DURING FINAL PUNCH LIST INSPECTION, CONTRACTOR SHALL HAVE ALL CLEANOUT COVERS AND ACCESS PANELS OPENED AND ITEMS EXPOSED FOR VERIFICATION AS TO THEIR INSTALLATION BY CONTRACTING OFFICER.

7 PROVIDE AUTOMATIC RESEALS FOR ALL FLOOR DRAINS.

8 SPRINKLER HEAD LOCATIONS SHALL BE SYMMETRICAL WITH ROOM, LIGHTS, DIFFUSERS, ETC. AND COORDINATE WITH THE REFLECTIVE CEILING PLANS. HEADS SHALL BE AS FOLLOWS.

A. LAY-IN CEILING SHALL HAVE SEMI-RECESSED HEADS WITH ESCUTCHEON COLOR SELECTED BY THE ARCHITECT.

B. SHEET ROCK OR PLASTER CEILINGS SHALL HAVE FULLY CONCEALED HEADS WITH COLOR OF CAP SELECTED BY THE ARCHITECT.

9 ALL PIPING TO COMPLY WITH 2012 IBC SEISMIC DESIGN CATEGORY C, OCCUPANCY CATEGORY IV.

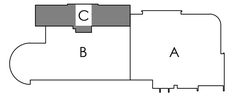
DAVID E. MCCLESKEY — REGISTERED ENGINEER — 20102 — 1/13/2017 — STATE OF MISSISSIPPI

P2.2



NUMBERED NOTES:

1. 1-1/4" C.W. FROM FLOOR BELOW. RISE TO ABOVE U
2. 1" H.W. FROM FLOOR BELOW. RISE TO ABOVE CLG. INSTALL 1/2" H.W. TO MB-1 W/ CUT-OFF VALVE.
3. 2" WASTE STACK AND 2" VENT STACK FROM BELOW, TO FLOOR ABOVE.
4. 1/2" C.W. FROM BELOW TO MB-1.
5. 2" CONDENSATE DOWN TO FLOOR BELOW. INSULATE WITH 3/4" ARMAFLEX.
6. 4" WASTE AND 4" VENT STACK FROM FLOOR BELOW. CONNECT WATER CLOSET TO SERVICES IN WALL. 1" C.W. FROM BELOW. CONNECT C.W. TO WC-3 F.V.
7. NEW 1/2" H.W. AND 1/2" C.W. FROM BELOW. 2" WASTE/VENT STACK FROM BELOW. CONTINUE VENT TO FLOOR ABOVE. CONNECT NEW L-2 TO SERVICES IN WALL.
8. 1-1/4" C.W. AND H.W. FROM BELOW. CONTINUE TO ABOVE CLG. PROVIDE 3/4" C.W. AND H.W. TAPS TO S-3 W/ CUT-OFF VALVES.
9. 1/2" C.W. FROM BELOW TO ICE MAKER BOX.
10. 1/2" C.W. AND H.W. FROM BELOW. CONNECT TO S-2 WITH CUT-OFF VALVES BELOW FIXTURE.
11. BALANCING VALVE W/ CIRCUIT SETTER IN H.W. RETURN LINES.
12. 3/4" H.W. CIRC., 1-1/2" H.W. AND 1-1/2" C.W. RISERS. H.W. AND C.W. RISERS FROM BELOW AND 3/4" RECIRC LINE FROM THIS FLOOR. ALL TO RISE TO FLOOR ABOVE TO WATER HEATER. SEE WATER HEATER.
13. 4" VENT FROM FLOOR BELOW.
14. 4" WASTE DOWN TO FLOOR BELOW.
15. 1-1/2" CONDENSATE PIPING FROM A/C UNIT.
16. 4" VENT FROM FLOOR BELOW. CONTINUE TO FLOOR ABOVE.
17. 2" VENT TO CONTINUE THROUGH TO FLOOR ABOVE.
18. GAS PIPING UP TO ATTIC/PENTHOUSE LEVEL.
19. DOWN TO COOKING EQUIPMENT WITH GAS COCK AND FIRE PROTECTION SHUT-OFF VALVE. INSTALL GAS REGULATOR TO REDUCE PRESSURE FROM 2LBS. TO 4oz. VENT REGULATOR UP THROUGH ROOF TO ATMOSPHERE. INSTALL DIRT LEG AND RUN FULL SIZE HORIZONTAL BEHIND EQUIPMENT. PROVIDE TAPS WITH CUT-OFF VALVES FOR EACH PIECE OF EQUIPMENT. MAIN GAS COCK AND FIRE PROTECTION SHUT-OFF VALVE SHALL BE LOCATED IN SPACE NEAR CEILING. DO NOT LOCATE ABOVE CEILING. INSTALL FLEXIBLE CONNECTION FROM TAPS TO EACH PIECE OF EQUIPMENT.
20. 1-1/2" CONDENSATE DOWN TO FLOOR BELOW.
21. 1/2" GAS (2LBS) DOWN TO DRYER CONNECTION WITH REGULATOR REDUCING PRESSURE FROM 2LBS TO 4oz. VENT REGULATOR TO ATMOSPHERE. INSTALL GAS COCK, UNION, DIRT LEG AND FLEXIBLE CONNECTION. INSTALL ACCORDING TO MFGR'S. INSTRUCTIONS.

NUMBERED NOTES:

1. 4" VENT FROM FLOOR BELOW.
2. 2" VENT FROM FLOOR BELOW.
3. 3/4" H.W. CIRC., 1-1/2" H.W. AND 1-1/2" C.W. RISERS FROM FLOOR BELOW. ALL TO WATER HEATER. SEE WATER HEATER.
4. WATER HEATERS. SEE DETAIL AND SCHEDULE.
5. 3/4" (2lbs.) GAS PIPING FROM FLOOR BELOW.
6. 1/2" (2LBS.) GAS UP THROUGH ROOF TO OUTSIDE AIR UNIT. INSTALL GAS REGULATOR TO REDUCE PRESSURE FROM 2LBS. TO 4oz. INSTALL GAS COCK, UNION AND DIRT LEG. SEAL ROOF PENETRATION WATER TIGHT. INSTALL PIPING SUPPORT AS REQUIRED.
7. 3/4" (2lbs.) GAS PIPING TO GAS WATER HEATERS. INSTALL GAS REGULATOR TO REDUCE PRESSURE FROM 2LBS. TO 4oz. VENT REGULATOR TO ATMOSPHERE. INSTALL UNION, GAS COCK, AND DIRT LEG FOR EACH WATER HEATER. SEAL ANY ROOF PENETRATIONS WATER TIGHT.
8. 1/2" (2lbs.) GAS PIPING TO UNIT HEATER WITH REGULATOR TO REDUCE PRESSURE FROM 2LBS. DOWN TO 4oz. INSTALL UNION, GAS COCK, AND DIRT LEG. VENT REGULATOR TO ATMOSPHERE. SEAL ANY ROOF PENETRATIONS WATER TIGHT.

GENERAL NOTES - HVAC

GENERAL DEMOLITION AND SALVAGE REQUIREMENTS

A. IT IS THE INTENT OF THE DEMOLITION PLANS TO AID THE CONTRACTOR IN BIDDING THE PROJECT BY PROVIDING INFORMATION ABOUT EXISTING HVAC EQUIPMENT, PIPING, AND ASSOCIATED MATERIALS AND THEIR REMOVAL.

B. ALL PIPING, DUCTWORK AND EQUIPMENT LOCATIONS SHOWN ON THESE DRAWINGS WERE TAKEN FROM EXISTING RECORD DRAWINGS AND SITE INVESTIGATION.

C. CONTRACTOR SHALL VISIT PROJECT SITE AND OBSERVE ALL EXISTING CONDITIONS AFFECTING THE WORK AND MAKE NECESSARY ADJUSTMENTS, TO FACILITATE INSTALLATION OF COMPLETE, OPERABLE SYSTEMS AT NO ADDITIONAL COST TO THE USING AGENCY.

D. THE MECHANICAL CONSTRUCTION SHALL INCLUDE ALL WORK REQUIRED FOR THE REMOVAL OF EXISTING MECHANICAL EQUIPMENT, PIPING, ETC. WHERE INDICATED OR REQUIRED TO FACILITATE NEW CONSTRUCTION. THE CONTRACTOR SHALL REMOVE FROM THE PREMISES OTHER DEVICES AND MATERIALS NOT REUSED IN THE BUILDING. USING AGENCY SHALL HAVE FIRST RIGHTS TO SALVAGED ITEMS.

GENERAL RENOVATION REQUIREMENTS

A. ALL PIPING SHOWN WITH DASHED LINES - DASHED LINES REPRESENT OUTSIDE DIMENSION OF PIPE INCLUDING INSULATION.

B. ANY INDICATED MOUNTING HEIGHTS ARE APPROXIMATE. FINAL MOUNTING HEIGHT SHALL BE DETERMINED IN FIELD.

C. INSTALLATION OF ALL EQUIPMENT AND SYSTEMS SHALL BE IN ACCORDANCE WITH, MANUFACTURER'S REQUIREMENTS, STANDARD DETAILS, SECTIONS AND ELEVATIONS SHOWN ON THE DRAWINGS.

D. CONTRACTOR SHALL MAINTAIN A CLEAR SERVICE AREA AROUND ALL EQUIPMENT FOR MAINTENANCE.

FIRST FLOOR PLAN PART C – HVAC DEMOLITION

SCALE: 1/8" = 1'-0"

PLAN NOTES:

1. REMOVE EXISTING WALL MOUNTED CONDENSING UNIT, REFRIGERANT PIPING, CONTROLS AND ALL APPURTENANCES.
2. REMOVE EXISTING THROUGH WALL CONDENSING UNIT, CONTROLS AND ALL APPURTENANCES.
3. REMOVE EXISTING SIDEWALL EXHAUST FAN, CONTROLS, DUCTWORK AND ALL APPURTENANCES.
4. REMOVE EXISTING SUPPLY AIR DUCTWORK, CEILING DIFFUSERS AND ALL APPURTENANCES.
5. REMOVE EXISTING CEILING EXHAUST GRILLE, AND ALL APPURTENANCES.
6. REMOVE EXISTING SIDEWALL EXHAUST GRILLE, AND ALL APPURTENANCES.
7. AREA INDICATES WHERE WE HADE NO ACCESS IN THE FIELD. REMOVE ANY AIR HANDING UNITS, DUCTWORK, DIFFUSERS, PIPING, CONTROLS, AND ALL APPURTENANCES.

CONTROL POINTS

Points List Table Column Definitions:

1. Point Description.
2. Type (number in point list schedule after each type refers to tag on schematics).
   - 2.1. AO: analog output
   - 2.2. AI: analog input
   - 2.3. DO: digital or binary output
   - 2.4. DI: digital or binary input
3. Device description.
   - 3.1. See Specification Section 230913 EMCS Basic Materials and Devices for device definitions and specifications.
4. Trend Logging.
   - 4.1. Commissioning: Where listed, point is to be trended at the basis listed for commissioning and performance verification purposes.
   - 4.2. Continuous: Where listed, point is to be trended at the basis listed continuously, initiated after system acceptance, for the purpose of future diagnostics.
   - 4.3. Trend Basis
     - 4.3.1. Where range of engineering units is listed, trend on a change of value (COV) basis (in other words record time stamp and value when point value changes by engineering unit listed).
     - 4.3.2. Where time interval is listed, trend on a time basis (in other words record time stamp and value at interval listed). All points related to a specific piece of equipment shall be trended at the same initiation time of day so data can be compared in text format.
5. Calibration.
   - 5.1. F = factory calibration only is required (no field calibration)
   - 5.2. HH = field calibrate with handheld device. Test/calibration equipment shall be at least twice as accurate as respective field device (for example if field device is ±0.5% accurate, test equipment shall be ±0.25% accurate over same range).

Note that points lists herein are for each system of like kind. Refer to Drawings for quantity of each.

SEQUENCES OF OPERATION – GENERAL

1. General:
   - 1.1. Contractor shall review sequences prior to programming and suggest modifications where required to achieve the design intent. Contractor may also suggest modifications to improve performance and stability or to simplify or reorganize logic in a manner that provides equal or better performance. Proposed changes in sequences shall be included as a part of Submittal Package 2.
   - 1.2. Include costs for program modifications if required to provide proper performance of the system.
   - 1.3. Unless otherwise indicated in SOOs, control loops shall be enabled and disabled based on the status of the system being controlled to prevent wind-up. Loops shall be initiated with the output set to a neutral (deadband) condition, e.g. valves and dampers close, VFDs at minimum speed, etc.
   - 1.4. When SOOs use outdoor air temperature present value and there are multiple outdoor air sensors, the physically closest sensor reading shall be used.
   - 1.5. The term "proven on" / "proven off") shall mean that the equipment's DI status point matches the state set by the equipment's DO command point.
   - 1.6. The term "PID loop" or "control loop" is used generically for all control loops and shall not be interpreted as requiring proportional plus integral plus derivative gains on all loops. Unless specifically indicated otherwise, the following guidelines shall be followed:
     - 1.6.1. Use proportional only (P–only) loops for limiting loops (such as zone CO2 limiting loops, etc.) to ensure there is no integral windup.
     - 1.6.2. Do not use the derivative term on any loops unless field tuning is not possible without it.
   - 1.7. All setpoints, timers, deadbands, PID gains, etc. listed in sequences shall be capable of being adjusted by the operator (with full administrative access) without having to access programming whether indicated as adjustable in sequences or not. Software (virtual) points shall be used for these setpoints. Fixed scalar numbers shall not be imbedded in programs unless the value will never need to be adjusted.
   - 1.8. Values for all points, including real (hardware) points used in control sequences shall be capable of being overridden by the user (e.g. for testing and commissioning). If hardware design prevents this for hardware points, they shall be added to a software point and the software point shall be used in all sequences. Exception: Not required for ASC hardware points.
   - 1.9. VFD speed points:
     - 1.9.1. The speed analog output sent to VFDs shall be configured such that 0% speed corresponds to 0 HZ and 100% speed corresponds to maximum speed configured in the VFD.
     - 1.9.2. Minimum speed setpoints for all VFD–driven equipment shall be determined in accordance with the following:
       - 1.9.2.1. Tests shall be done for each piece of equipment, except that for multiple pieces of identical equipment used for identical applications, only one piece of equipment need be tested with results applied to all. Note that for fans, there is no minimum speed required for motor cooling. Power drops with cube of speed, causing motor losses to be minimal at low speeds.
       - 1.9.2.2. The work shall be done only after fan system is fully installed and operational.
       - 1.9.2.3. Determine minimum speed setpoint as follow:
         - 1.9.2.3.1. Start the fan.
         - 1.9.2.3.2. Manually set speed to 6 Hz (10%) unless otherwise indicated in control sequences. For cooling towers with gear boxes, use 20% or whatever minimum speed is recommended by tower manufacturer.
         - 1.9.2.3.3. Observe fan in field to ensure it is visibly rotating. If not, gradually increase speed until it is.
         - 1.9.2.3.4. The speed at this point shall be the minimum speed setpoint for this piece of equipment.
         - 1.9.2.3.5. Record minimum speeds in log and store in software point as indicated in Specifications.
     - 1.9.3. For each piece of equipment the minimum speed shall be stored in a single software point. This value shall be written to the VFD's minimum speed setpoint via the drive's network interface. In this way there is only one minimum setpoint, rather than setpoints both in the drive and in software which could differ.
   - 1.10. Trim & Respond Setpoint Reset Logic:
     - 1.10.1. Trim & Respond setpoint reset logic and zone/system reset requests where referenced in sequences shall be implemented as described below.
     - 1.10.2. "Requests" are pressure, cooling, or heating setpoint reset requests generated by zones or air handling systems.
       - 1.10.2.1. For each zone or system, and for each setpoint reset request type listed for the zone/system, provide he following software points:
         - 1.10.2.1.1. Importance Multiplier (default = 1). This point is used to scale the number of requests the zone/system is generating. A value of zero causes the zone/system's requests to be ignored. A value greater than zero can be used to effectively increase the number of requests from the zone/system based on the critical nature of the spaces served, or to increase the requests beyond the number of ignored requests (defined below) in the Trim & Respond reset block. Request–hours:
         - 1.10.2.1.2.
           - 1.10.2.1.2.1. This point accumulates the integral of requests (prior to adjustment of Importance Multiplier) to help identify zones/systems that are driving the reset logic. Every x minutes (adjustable, default 5 minutes), add x/60 times the current number of requests to this request–hours accumulator point.
           - 1.10.2.1.2.2. The request–hours point is reset to zero upon a global command from the system serving the zone/system – this global point simultaneously resets the request–hours point for all zones/systems served by this system/plant.
           - 1.10.2.1.2.3. Cumulative %–request–hours is the zone request–hours divided by the zone run–hours (the hours in any Mode other than Unoccupied Mode) since the last reset, expressed as a percentage.
           - 1.10.2.1.2.4. A Level 4 alarm is generated if the zone Importance Multiplier is greater than zero, the zone %–request–hours exceeds 70%, and the total number of zone run–hours exceeds 40.
       - 1.10.2.2. See zone and air handling system control sequences for logic to generate requests.
       - 1.10.2.3. Multiply the number of requests determined from zone/system logic times the Importance Multiplier and send to the system/plant that serves the zone/system. See system/plant logic to see how requests are used in Trim & Respond logic.
     - 1.10.3. Variables. All variables below shall be adjustable from a reset graphic accessible from a hyperlink on the associated system/plant graphic. Initial values are defined in system/plant sequences herein. Values from trim, respond, time step, etc. shall be tuned to provide stable control.

Variable	Definition
Device	Associated device (e.g. fan)
SP0	Initial setpoint
SPmin	Minimum setpoint
SPmax	Maximum setpoint
Td	Delay timer
T	Time step
I	Number of ignored requests
R	Number of requests from zones/systems
SPtrim	Trim amount
SPres	Respond amount
SPres–max	Maximum response per time interval

     - 1.10.4. Trim & Respond logic shall reset setpoint within the range SPmin to SP max. When the associated device is off, the setpoint shall be SP0. The reset logic shall be active while the associated device is proven on, starting Td after initial device start command. When active, every time step T, trim the setpoint by SPtrim. If there are more than I Requests, respond by changing the setpoint by SPres times (R – I), i.e. (the number of Requests minus the number of Ignored requests). But the net response shall be no more than SPres–max. The sign of SPtrim must be the opposite of SPres and SPres–max. For example, if SPtrim = –0.1, SPres = +0.15, SPres–max = +0.35, R = 3, I = 2, then each time step, the setpoint change = –0.1 + (3 – 2)*0.15 = +0.05. If R = 10, then setpoint change = –0.1 + (10 – 2)*0.15 = 1.1 but limited to a maximum of 0.35. If R = 2, the setpoint change is –0.1.
   - 1.11. Lead/lag and lead/standby alternation:
     - 1.11.1. Even wear:
       - 1.11.1.1. Lead/lag: Unless otherwise noted, parallel staged devices (such as fans, pumps, towers) shall be lead/lag alternated when more than one is off or more than one is on so that the device with the most operating hours is made the later stage device and the one with the least number of hours is made the earlier stage device. For example, assuming there are three devices, if all three are off or all are on, the staging order will simply be based on run hours from lowest to highest. If two devices are on, the one with the most hours will be set to be stage 2 while the other is set to stage 1; this may be the reverse of the operating order when the devices were started. If two devices are off, the one with the most hours will be set to be stage 3 while the other is set to stage 2; this may be the reverse of the operating order when the devices were stopped.
       - 1.11.1.2. Lead/standby: Unless otherwise noted, parallel devices (such as pumps, towers) that are 100% redundant shall be lead/standby alternated when more than one is off so that the device with the most operating hours is made the later stage device and the one with the least number of hours is made the earlier stage device. For example, assuming there are three devices, if all three are off, the staging order will be based on run hours from lowest to highest. If devices run continuously, lead/standby shall switch at an adjustable runtime; standby device shall first be started and proven on before former lead device is changed to standby and shut off.

SEQUENCES OF OPERATION – GENERAL CONT'D

   - 1.11.2. Exceptions:
     - 1.11.2.1. Operators shall be able to manual fix staging order via software points on graphics overriding the Even Wear logic above, but not overriding the Failure or Hand Operation logic below.
     - 1.11.2.2. Failure: If the lead device fails or has been manually switched off, the device shall be placed into high level alarm (Level 2) and set to the last stage position in the lead/lag order until alarm is reset by operator. Staging position of remaining devices shall follow the Even Wear logic. A failed device in alarm can only automatically move up in the staging order if another device fails. Note that a device in alarm will be commanded to run if the sequence calls for it to run. In this way the EMCS will keep trying to run device(s) until if finds enough that will operate. Failure is determined by:
       - 1.11.2.2.1. Variable Speed Fans and Pumps:
         - 1.11.2.2.1.1. VFD critical fault is ON.
         - 1.11.2.2.1.2. Status point not matching its on/off point for 15 seconds when device is commanded on.
         - 1.11.2.2.1.3. Supervised HOA at control panel is OFF position.
         - 1.11.2.2.1.4. Loss of power (e.g. VFD DC Bus voltage = zero).
       - 1.11.2.2.2. Constant Speed Fans and Pumps:
         - 1.11.2.2.2.1. Status point not matching its on/off point for 15 seconds when device is commanded on.
         - 1.11.2.2.2.2. Supervised HOA at control panel is OFF position.
     - 1.11.2.3. Hand Operation. If a device is on in Hand (for example via an HOA switch or local control of VFD), the device shall be set to the lead device and a low level alarm (Level 4) shall be generated. The device will remain as lead until the alarm is reset by the operator. Hand operation is determined by:
       - 1.11.2.3.1. Variable Speed Fans and Pumps:
         - 1.11.2.3.1.1. Status point not matching its on/off point for 15 seconds.
         - 1.11.2.3.1.2. VFD in local "hand" mode.
         - 1.11.2.3.1.3. Supervised HOA at control panel in ON position.
       - 1.11.2.3.2. Constant Speed Fans and Pumps:
         - 1.11.2.3.2.1. Status point not matching its on/off point for 15 seconds when device is commanded off.
         - 1.11.2.3.2.2. Supervised HOA at control panel in ON position.
   - 1.12. VAV Box Controllable Minimum:
     - 1.12.1. This section is used to determine the lowest possible VAV box airflow setpoint allowed by the controls (Vm) used in VAV box control sequences. The minimums shall be stored as software points that may be adjusted by the user but need not be adjustable via the graphical user interface.
     - 1.12.2. Option 1: If the VAV box controls simply stop moving the damper when the airflow reading becomes too low to register and then re–enables the damper when the airflow reading rises above that threshold, Vm shall be equal to zero.
     - 1.12.3. Option 2: The minimum setpoint Vm shall be determined as follows:
       - 1.12.3.1. Determine the velocity pressure sensor reading VPm in inches H20 that results in a digital reading from the transducer and A/D converter of 12 bits or counts (assuming a 10 bit A/D converter). This is considered sufficient resolution for stable control. See Specification Section 230929.
       - 1.12.3.2. Using the velocity pressure sensor amplification factor provided by the sensor manufacturer for each VAV box sensor size, calculate the minimum velocity vm for each VAV box size as:

$$vm = 4005*\sqrt{(VPm/F)}$$

Where F is not known it can be calculated from the measured CFM at 1 inch signal from the VP sensor:

$$F = (4005*A/CFM)^2$$

where A is the nominal duct area (square feet), equal to:

$$A = \pi(D/24)^2$$

where D is the nominal duct diameter (inches).

       - 1.12.3.3. Calculate the minimum airflow setpoint allowed by the controls (Vm) for each VAV box size as:

$$Vm = vm*A$$

2. Zones:
   - 2.1. This section applies to all single zone systems and sub–zones of air handling systems, such as VAV boxes, fan–powered boxes, etc.
   - 2.2. Setpoints:
   - 2.3.
     - 2.3.1. Each zone shall have separate unoccupied and occupied setpoints, and separate heating and cooling setpoints. As a default:

Zone Type	Occupied		Unoccupied	
	Heat	Cool	Heat	Cool
Exterior	70°F	74°F	60°F	90°F
Interior	70°F	73°F	60°F	90°F
Circulation	69°F	76°F	60°F	90°F
Mech/Elec Rooms	60°F	85°F	60°F	85°F
Network/IT	65°F	75°F	65°F	75°F

     - 2.3.2. The software shall prevent:
       - 2.3.2.1. The heating setpoint from exceeding the cooling setpoint minus 1°F (in other words the minimum deadband shall be 1°F).
       - 2.3.2.2. The unoccupied heating setpoint from exceeding the occupied heating setpoint; and
       - 2.3.2.3. The unoccupied cooling setpoint from being less than the occupied cooling setpoint.
     - 2.3.3. Where the zone has a local occupant adjustable setpoint adjustment knob/button:
       - 2.3.3.1. The adjustment shall be capable of being limited in software.
         - 2.3.3.1.1. As a default, occupied cooling setpoint shall be limited between 72°F and 80°F.
         - 2.3.3.1.2. As a default, occupied heating setpoint shall be limited between 65°F and 72°F.
       - 2.3.3.2. The adjustment shall move both the existing heating and cooling setpoints upwards or downwards by the same amount unless the limit has been reached.
       - 2.3.3.3. The adjustment shall only be active in Occupied mode.
     - 2.3.4. The operative setpoint shall be determined by the Zone Group's mode:
       - 2.3.4.1. The setpoints shall be the occupied setpoint during Occupied mode, Warm–up mode, and Cool–down mode.
       - 2.3.4.2. The setpoints shall be the unoccupied setpoints during Unoccupied mode, Setback mode, and Setup mode.
     - 2.3.5. Hierarchy of Setpoint Adjustments: The following adjustment restrictions shall prevail in order from highest to lowest priority:
       - 2.3.5.1. Setpoint overlap restriction specified herein.
       - 2.3.5.2. Local setpoint adjustment.
       - 2.3.5.3. Scheduled setpoints based on Zone Group mode.
   - 2.4. Local override: When thermostat override buttons are depressed, the request for Occupied Mode operation shall be sent up to the Zone Group control for 60 minutes. (This will cause all zones in the Zone Group to operate in Occupied Mode to ensure that the system has adequate load to operate stably.)
   - 2.5. Control Loops:
     - 2.5.1. Two separate control loops shall operate to maintain space temperature at setpoint, the Cooling Loop and the Heating Loop. Both loops shall be continuously active.
     - 2.5.2. The Cooling Loop shall maintain the space temperature at the active cooling setpoint. The output of the loop shall be a virtual point ranging from 0% (no cooling) to 100% (full cooling).
     - 2.5.3. The Heating Loop shall maintain the space temperature at the active heating setpoint. The output of the loop shall be a virtual point ranging from 0% (no heating) to 100% (full heating).
     - 2.5.4. Loops shall use proportional + integral logic or fuzzy logic. Proportional–only control is not acceptable, although the integral gain shall be small relative to the proportional gain. P and I gains shall be adjustable from the Operator Workstation.
     - 2.5.5. See other sections for how the outputs from these loops are used.
   - 2.6. Zone Modes:
     - 2.6.1. Heating Mode: when the output of the space heating control loop is greater than zero.
     - 2.6.2. Cooling Mode: when the output of the space cooling control loop is greater than zero and the output of the heating loop is equal to zero.
     - 2.6.3. Deadband Mode: when not in either the Heating or Cooling Mode.

SEQUENCES OF OPERATION – GENERAL CONT'D

   - 2.7. Alarms:
     - 2.7.1. Zone temperature alarms:
       - 2.7.1.1. If the zone is 3°F above cooling or below heating setpoints for 10 minutes, generate Level 3 alarm.
       - 2.7.1.2. If the zone is 5°F above cooling or below heating setpoints for 10 minutes, generate Level 2 alarm.
       - 2.7.1.3. Suppress zone temperature alarms as follows:
         - 2.7.1.3.1. After zone setpoint is changed for a period of 10 minutes per degree of difference between the zone temperature at the time of the change and the new setpoint. This suppression period applies any time that the zone setpoint is changed.
         - 2.7.1.3.2. While Zone Group is in Warm–up or Cool–down Modes.
         - 2.7.1.3.3. For zones with an Importance multiplier (see Trim & Respond sequences above) of zero.
     - 2.7.2. For zones with CO2 sensors:
       - 2.7.2.1. If the CO2 concentration is less than 300 ppm, or the zone is in unoccupied mode for more than 2 hours and zone CO2 concentration exceeds 600 ppm, generate a Level 4 alarm, indicating sensor may be out of calibration.
       - 2.7.2.2. If the CO2 concentration exceeds setpoint plus 10% for more than 10 minutes generate a Level 3 alarm.
3. Zone Groups (aka Isolation Areas):
   - 3.1. Each system shall be broken into separate Zone Groups composed of a collection of one or more zones served by the air handling system.
   - 3.2. Each Zone Group shall have separate occupancy schedules and operating modes from other Zone Groups served by the air handling system. All zones in the Zone Group shall be in the same operating mode.
   - 3.3. Individual Zone Groups shall be as follows:

Zone Group Name	Default Schedule
First Floor	WD: 6am to 8pm WE: 6 am to 8pm HOL: off
Second Floor	WD: 6am to 8pm WE: 8 am to 10pm HOL: off
Third Floor	WD: 6am to 8pm WE: 8 am to 10pm HOL: off

   - 3.4. Provide testing/commissioning software switches to override all zones served by the Zone Group. Provide a single software switch for each of the zone override switches listed under terminal box control above. When the Zone Group override switch value is changed, the terminal box zone override switch value for each zone in the Zone Group shall change to the same value. This only occurs when the switch changes value; the switch at each zone shall be capable of being changed to a different value from the Zone Group switch. These software switches are for commissioning and need not be shown on graphics.
   - 3.5. Zone Group Operating Modes: Each Zone Group shall have the following modes:
     - 3.5.1. Occupied Mode: A Zone Group is in the occupied mode when any of the following is true:
       - 3.5.1.1. The time of day is between the Zone Group's scheduled occupied start and stop times.
       - 3.5.1.2. Manual override from zone temperature sensor.
     - 3.5.2. Warm–up mode. Warm–up start time shall be determined based on the zone in the Zone Group whose space temperature is furthest below its occupied heating temperature setpoint, the outside air temperature (using global outdoor air temperature sensor, not any associated with AHUs), and a building mass/capacity factor. This factor shall be manually adjusted or self–tuned by the program based on internal trending so that all zones in the Zone Group are brought up to their occupied setpoint by the scheduled occupied start hour. The tuning period mode shall be turned on or off by a software switch (to allow tuning to be stopped after the system has been trained). Warm–up mode shall start no earlier than 3 hours before the scheduled occupied start hour and shall end at the scheduled occupied start hour. occupied start hour.
     - 3.5.3. Cool–down mode. Cool–down shall be determined based on the zone in the Zone Group whose space temperature is furthest above its occupied cooling temperature setpoint, the outside air temperature (using global outdoor air temperature sensor, not any associated with AHUs), and a building mass/capacity factor. This factor shall be manually adjusted or self–tuned by the program based on internal trending so that all zones in the Zone Group are brought down to their occupied setpoint by the scheduled occupied start hour. The tuning period mode shall be turned on or off by a software switch (to allow tuning to be stopped after the system has been trained). Cool–down mode shall start no earlier than 3 hours before the scheduled occupied start hour and shall end at the scheduled occupied start hour.
     - 3.5.4. Setback mode. During other than normal mode, and warm–up mode, if any 2 (adjustable; set to all zones if there are fewer in Zone Group) zone(s) in the Zone Group falls 2°F below its active unoccupied setback setpoint, until all spaces in the Zone Group are above their active setback setpoints.
     - 3.5.5. Setup mode. During other than normal mode, warm–up mode, and setback mode, if any 2 (adjustable; set to all zones if there are fewer in Zone Group) zone(s) in the Zone Group rises 2°F above its active unoccupied setup setpoint until all spaces in the Zone Group are below their active setup setpoints.
     - 3.5.6. Unoccupied Mode: When the Zone Group is not in any other mode.
4. Air Handling Unit, Fan Coil Unit, Blower Coil Unit, Split–System Unit System Modes:
   - 4.1. AHU, FCU, BCU, and/or Split–System modes are the same as the mode of the Zone Groups served by the system. When Zone Groups served by an air handling system are in different modes, the following hierarchy applies (highest one sets AHU mode):
     - 4.1.1. Occupied mode.
     - 4.1.2. Cool–down mode.
     - 4.1.3. Setup mode.
     - 4.1.4. Warm–up mode.
     - 4.1.5. Setback mode.
     - 4.1.6. Unoccupied mode.
5. Miscellaneous Alarms:
   - 5.1. Points in Hand (Operator Override) via Workstation command (including name of operator who made the command) or via supervised HOA switch at output: Level 4.
   - 5.2. Equipment alarm (for equipment with alarm contacts such as VFDs): Level 2.
   - 5.3. Failure or disconnection of a sensor as indicated by signal widely out of range: Level 2.
   - 5.4. Panel or LAN failure: Level 2.
   - 5.5. Loss of communication with any device via Gateway (e.g. VFD) for more than 30 seconds: Level 2 (alarm shall indicate which specific device is not responding).

CONTROLS LEGEND

GENERAL

- SA — SUPPLY AIR
- OA — OUTSIDE/OUTDOOR AIR
- RA — RETURN AIR
- EA — EXHAUST AIR

EQUIPMENT

- 2–WAY VALVE
- 3–WAY VALVE
- SD — SMOKE DETECTOR
- FAN – PROPELLER
- FAN – CENTRIFUGAL HOUSED
- FAN – PLUG / PLENUM
- FURNACE
- FILTER
- AFMS–X — AIR FLOW MEASURING STATION
- C / C — COIL
- OPPOSED BLADE DAMPER
- PARALLEL BLADE DAMPER
- ENABLE / RUN / SPEED / NETWORK / VFD — VARIABLE SPEED DRIVE

SENSORS

- STATIC PRESSURE TIP
- SENSOR WELL
- T — TEMPERATURE SENSOR & SENSOR WELL
- HT–X / TS–X — HUMIDITY TRANSMITTER (HT) OR TEMPERATURE SENSOR (TS) – DUCT MTD. (SINGLE POINT)
- TS–X — AVERAGING TEMPERATURE SENSOR
- M — MODULATING ACTUATOR
- M2 — 2–POSITION ACTUATOR
- DPS–X — DIFFERENTIAL PRESSURE SWITCH
- DPT–X — DIFFERENTIAL PRESSURE TRANSMITTER
- FM–X — FLOW METER
- TS–X — TEMPERATURE SENSOR – WALL MTD.
- HT–X — HUMIDITY TRANSMITTER – WALL MTD.
- CO2–X — CARBON DIOXIDE SENSOR – WALL MTD.
- OCC — OCCUPANCY SENSOR
- CS — CURRENT SWITCH
- CT — CURRENT TRANSFORMER
- WLD–X — WATER LEAK DETECTOR
- RC — VARIABLE REFRIGERANT FLOW SYSTEM INDOOR UNIT REMOTE CONTROLLER

OAU SEQUENCE OF OPERATION

General: Constant Volume (CV) Outdoor Air Unit (OAU) with energy recovery wheel, Direct Expansion (DX) cooling coil, hot–gas reheat coil, natural gas furnace, supply fan and exhaust fan. Unit shall be controlled by its internal Direct–Digital Controller.

OAU System Modes: OAU system modes are the same as the mode of the Zone Group served by the system. When Zone Groups served by the OAU are in different modes, the following hierarchy applies (highest one sets OAU mode):

1. Occupied mode
2. Unoccupied mode

Fan Control:

1. Supply Fan and Exhaust Fan Start/Stop
   - 1.1. OAU supply fan and exhaust fans shall run when the system is Occupied and shall be off in Unoccupied Mode.
   - 1.2. OAU unit controller shall command the outdoor and exhaust air dampers open whenever the OAU is enabled. Dampers shall be closed when unit is disabled.
   - 1.3. OAU shall be hard–wire interlocked through smoke detectors. Unit shall be shutdown when the smoke detector auxiliary contacts are energized.
   - 1.4. Outdoor air flow rate from OA AFMS–1 shall be displayed on the OAU graphic at discharge duct.
   - 1.5. Exhaust air flow rate from EA AFMS–1 shall be displayed on the OAU graphic at inlet duct.
   - 1.6. EMCS shall use the OAU status point to accumulate runtime.
2. Supply Fan Speed Control:
   - 2.1. Supply fan VFD speed shall be set to run at the speed corresponding to its design air flow rate when the fan is proven on. Division 23C contractor shall coordinate with Testing, Adjusting, and Balancing Agency to determine exact VFD speed setpoint.
3. Exhaust Fan Speed Control:
   - 3.1. Exhaust fan VFD speed shall be set to run at the speed corresponding to its design air flow rate when the fan is proven on. Division 23C contractor shall coordinate with Testing, Adjusting, and Balancing Agency to determine exact VFD speed setpoint. Exact exhaust air flow rate shall be determined by TAB Agency that provides both code required exhaust and a positive building pressurization of 0.05 inches w.c. (adjustable).

Enthalpy Wheel Control:

1. Energy recovery wheel control shall be enabled when the supply fan is proven on.
2. Energy recovery wheel control logic:
   - 2.1. OA temperature < 55°F (adjustable): Leaving energy recovery wheel air temperature (outdoor air side) shall be controlled to the supply air temperature setpoint using a PID loop whose output is mapped to sequence the energy recovery wheel and wheel bypass dampers.
   - 2.2. 55°F ≥ OA temperature ≥ 69°F (adjustable): Energy recovery wheel is off and bypass dampers open.
   - 2.3. OA temperature > 69°F (adjustable): Energy recovery wheel shall be at full speed and bypass dampers closed.

Supply Air Temperature Control:

1. Control loop is enabled when the supply fan is proven on, and disabled and output set to zero otherwise. When loop is disabled, slowly reduce loop output to zero to prevent sudden pressure changes.
2. Supply Air Temperature Setpoint: 55°F (adjustable) when outdoor air temperature is greater than or equal to 65°F (adjustable).
3. Supply Air Temperature Setpoint: 70°F (adjustable) when outdoor air temperature is less than 65°F (adjustable).
4. DX Cooling Coil Control: The DX cooling coil leaving air temperature control loop shall be mapped to stage the multiple cooling stages to maintain the cooling coil leaving air temperature setpoint, 55°F (adjustable).
5. Reheat Coil Control: When the outdoor air temperature is less than 65°F (adjustable), the reheat coil control loop output shall be mapped to modulate the reheat coil output to maintain the supply air temperature setpoint.
6. Natural Gas Heat Exchanger: When the outdoor air temperature is less than 65°F (adjustable), the heat exchanger control loop output shall be mapped to modulate the natural gas heat exchanger output to maintain the supply air temperature setpoint.

Safeties and Interlocks:

1. Supply fan shall be hardwire interlocked through the unit smoke detector(s) to shut down the unit upon smoke detection.

EMCS Alarms: Provide the following EMCS alarms:

1. Maintenance interval alarm when unit has operated for more than 2000 hours: Level 5. Reset interval counter when alarm is acknowledged.
2. Unit alarm is indicated by the status being different from the command for a period of 60 seconds.
   - 2.1. Commanded on, status off: Level 2
   - 2.2. Commanded off, status on: Level 4
3. Filter pressure drop exceeds alarm limit: Level 5. The alarm limit shall vary with fan speed as follows:
4. High supply air temperature (more than 5 °F above setpoint) when control loop is active for longer than 15 minutes: Level 3.
5. Low supply air temperature (more than 5 °F below setpoint) when control loop is active for longer than 15 minutes: Level 3.
6. High building pressure (more than 0.1") for 5 minutes. Level 3.
7. Low building pressure (less than 0.0") for 5 minutes. Level 4.
8. Outdoor airflow less than setpoint by 10% for 10 minutes when loop is active: Level 3.

Testing/Commissioning Overrides: Provide software points that interlock to a chilled water and hot water plant level point to:

Force all stages of cooling on.
Force all stages of cooling off.
Force all stages of heating on.
Force all stages of heating off.

VRF SYSTEM SEQUENCE OF OPERATION

General: Once enabled via the Building Automation System (BAS), the Variable Refrigerant Flow (VRF) system shall operate subject to its own internal controls and safeties.

1. See Sequence of Operation – General for setpoints, loops, control modes, alarms, etc.
2. BAS shall enable/disable, schedule system modes, monitor system parameters, and change setpoints for the VRF system via the BACnet gateway.
3. Division 23 HVAC Contractor shall be responsible for initial VRF system setup, programming, point naming, schedules, setpoints, etc (system configuration). Division 23 HVAC Contractor and VRF system vendor shall provide technical support to the Section 230900 BAS (Division 23C) Contractor in mapping across BAS points.
4. Zone Temperature Control: Zone temperature shall be controlled via each indoor unit's remote controller within the temperature limits specified.
5. BAS Alarms:
   - 5.1. Maintenance interval alarm when unit has operated for more than 1500 hours: Level 5. Reset interval counter when alarm is acknowledged.

1 DETAIL OF WET PIPE FIRE PROTECTION RISER — NO SCALE

FIRE PROTECTION GENERAL NOTES

1. INCLUDE ALL LABOR, MATERIAL, E□UIPMENT AND SER□ICE NECESSARY FOR AND REASONABLY INCIDENTAL TO THE DESIGN, FABRICATION AND INSTALLATION OF THE COMPLETE AUTOMATIC FIRE PROTECTION SYSTEMS AS INDICATED ON THE CONTRACT DRA□INGS AND AS SPECIFIED IN THE CONTRACT SPECIFICATIONS.

2. THE FIRE SPRIN□LER SYSTEM DESCRIBED ON THE DRA□INGS AND IN THE SPECIFICATIONS SHALL BE FULLY DESIGNED BY THE FIRE PROTECTION CONTRACTOR'S□. THE FIRE SUPPRESSION SYSTEM DRA□INGS AND SPECIFICATIONS ARE PERFORMANCE BASED ONLY. THE DESIGN BUILD CONTRACTOR'S□ SHALL BE FULLY RESPONSIBLE FOR THE DESIGN AND TO PRO□IDE ALL NECESSARY E□UIPMENT, HARD□ ARE, CONTROLS, SENSOR, ETC. PER LOCAL FIRE PROTECTION CODES.

3. IN GENERAL, □ OR□ SHALL INCLUDE, BUT NOT BE LIMITED TO:
   A. COMPLETE O□ERHEAD AUTOMATIC SPRIN□LER SYSTEMS AS INDICATED ON THE CONTRACT DRA□INGS AND CONTRACT SPECIFICATIONS.
   B. CONNECTION TO UNDERGROUND FIRE SER□ICE.
   C. SYSTEMS AND DE□ICE TESTING.
   D. ALL NECESSARY PERMITS.

4. THE FIRE SPRIN□LER SYSTEMS FOR PROTECTION OF THE SHOP BUILDING SHALL BE HYDRAULICALLY DESIGNED □ ET PIPE SPRIN□LER SYSTEMS AS SPECIFIED IN THE FOLLO□ ING
   A. OFFICES, INCLUDING CORRIDORS, LOUNGES, AND SIMILAR SPACES SHALL BE DESIGNED FOR A LIGHT HA□ARD OCCUPANCY TO PRO□IDE A MINIMUM DESIGN DISCHARGE DENSITY OF 0.10 GPM PER S□ FT O□ER THE HYDRAULIC CALCULATION AREA OR ROOM.
   B. SHOP AREA, MECHANICAL, MINOR STORAGE, AND SIMILAR AREAS OF THE BUILDINGS SHALL BE DESIGNED FOR AN ORDINARY HA□ARD GROUP 1 OCCUPANCY. MA□IMUM SPRIN□LER SPACING SHALL BE 130 S□ FT.
   C. ALL SPRIN□LERS □ ITHIN THE PRO□ECT AREA SHALL BE NE□ , □UIC□ RESPONSE, ORDINARY TEMPERATURE RATING □E□CEPT AS RE□UIRED BY NFPA 13 - 2010 SECTION 8.3.2.□
   D. CALCULATIONS SHALL INCLUDE AN INSIDE HOSE STREAM ALLO□ ANCE OF 100 GPM.

5. PIPE SI□ES INDICATED ON THE CONTRACT DRA□INGS SHALL NOT BE REDUCED.

6. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ESTABLISHING AND IMPLEMENTING ALL SAFETY PROGRAMS AND PROCEDURES FOR THIS PRO□ECT AND SHALL COMPLY □ ITH ALL FEDERAL, STATE AND LOCAL SAFETY AND HEALTH REGULATIONS.

7. THE CONTRACT DRA□ INGS ARE DIAGRAMMATIC ONLY. PIPE LENGTHS □IF SHO□ N□ ARE APPRO□IMATE CENTER TO CENTER LENGTHS BET□EEN FITTINGS. THE CONTRACTOR SHALL DETERMINE THE ACTUAL MEASUREMENTS AND MA□E ANY AND ALL SUCH LENGTH AND OFFSET AD□USTEMENTS AS MAY BE NECESSARY TO COMPLETE THE INSTALLATION AT NO CHANGE IN THE CONTRACT PRICE. THE CONTRACT DRA□ INGS ARE NOT INTENDED TO RELIE□E THE CONTRACTOR OF ANY RESPONSIBILITY FOR A□OIDING CONFLICTS OR OBSTRUCTIONS, OR FOR INSTALLING THE NUMBER OF SPRIN□LERS AND SUPPLY PIPING AS RE□UIRED TO PRO□IDE COMPLETE PROTECTION OF THE DESIGNATED AREAS IN ACCORDANCE □ ITH THE RE□UIREMENTS OF THE REFERENCED STANDARDS AND THESE SPECIFICATIONS. □ RITTEN APPRO□AL SHALL BE OBTAINED FROM THE PROFESSIONAL PRIOR TO MA□ING ANY MA□OR DE□IATIONS FROM THE ARRANGEMENT AND LAYOUT SHO□ N ON THE CONTRACT DRA□INGS.

8. ALL E□UIPMENT SHALL BE LISTED BY UNDER□ RITER'S LABORATORIES AND□OR FACTORY MUTAL APPRO□ED.

9. SYSTEM, E□UIPMENT, INSTALLATION AND MATERIALS AND METHODS USED SHALL COMPLY □ ITH THE FOLLO□ ING:
   A. NATIONAL FIRE PROTECTION ASSOCIATION □NFPA□1 FIRE CODE 2012 EDITION.
   B. NFPA 13 STANDARD FOR THE INSTALLATION OF SPRIN□LER SYSTEMS 2010 EDITION.
   C. INTERNATIONAL BUILDING CODE - 2012
   D. MANUFACTURER'S RECOMMENDATIONS AND GUIDELINES.

10. ALL MATERIALS AND E□UIPMENT FURNISHED BY THE CONTRACTOR SHALL BE NE□ , FIRST GRADE STANDARD, CURRENT PRODUCTS OF A MANUFACTURER REGULARLY ENGAGED IN THE PRODUCTION OF SUCH MATERIALS AND E□UIPMENT. □ HERE T□O OR MORE PIECES OF E□UIPMENT PERFORMING THE SAME FUNCTION ARE RE□UIRED, THEY SHALL BE THE PRODUCT OF ONE MANUFACTURER AND E□ACT DUPLICATES.

11. PIPING SHALL BE NE□ , DESIGNED FOR 300 PSI □ OR□ING PRESSURE, CONFORMING TO ASTM SPECIFICATIONS, AND HA□E THE MANUFACTURER'S NAME OR BRAND ALONG □ ITH THE PIPE APPLICABLE ASTM STANDARD MAR□ED ON EACH LENGTH OF PIPE.

12. PIPING 2" DIAMETER AND SMALLER SHALL BE SCHEDULE 40 BLACK STEEL PIPE. PIPE SHALL BE MANUFACTUERED IN ACCORDANCE □ ITH SPECIFICATIONS ASTM A53 AND A135.

13. PIPING 2-1/2" DIAMETER AND LARGER SHALL BE SCHEDULE 10 BLACK STEEL PIPE MANUFACTURED IN ACCORDANCE WITH SPECIFICATION ASTM A135.

14. OTHER THIN-□ ALLED PIPING MATERIALS □SUCH AS SCHEDULE, 5, □L AND BLT THREADABLE THIN□ ALLS, ETC.□□ ILL NOT BE PERMITTED.

15. ALL FIRE PROTECTION SYSTEM PIPING SHALL BE PRO□IDED □ ITH FACTORY APPLIED ANTIMICROBIAL COATINGS TOINHIBIT MICROBIOLOGICALLY INFLUENCED CORROSION (MIC). ALLIED TUBE AND CONDUIT "ABF II", WHEATLAND TUBE COMPANY "MIC SHIELD" OR EQUAL.

16. THREADED FITTINGS SHALL BE CLASS 125 CAST IRON, BLAC□, AND IN ACCORDANCE □ ITH ANSI B16.□ OR DUCTILE OR MALLEABLE IRON, 150 LB CLASS, BLAC□, AND IN ACCORDANCE □ ITH ANSI B16.3. SCRE□ ED □OINTS SHALL BE MADE UP □ ITH APPRO□ED TEFLON □OINT COMPOUND OR TAPE.

17. BOLT ON OR STRAP ON BRANCH AND OUTLET FITTINGS □ ILL NOT BE PERMITTED. SIMILARLY, HOLE CUT PIPING SYSTEM OR STRAPLESS OUTLETS □ ILL NOT BE PERMITTED.

18. GROO□ED COUPLINGS SHALL BE UL LISTED AND□OR FM APPRO□ED FOR FIRE PROTECTION SER□ICE. PLAIN-END TYPE PIPE FITTINGS AND COUPLINGS SHALL NOT BE USED.

19. ALL PENDENT AND SIDE□ ALL SPRIN□LERS LOCATED □ ITHIN 7 FT OF THE FLOOR OR SUB□ECT TO MECHANICAL DAMAGE SHALL BE PRO□IDED □ ITH LISTED SPRIN□LER GUARDS COMPATIBLE □ ITH THE SPRIN□LER MODELS AND TYPES ON □ HICH THEY ARE INSTALLED.

20. E□TRA SPRIN□LERS IN THE □UANTIES RE□UIRED BY NFPA 13, CABINETS, AND □ RENCHES SHALL BE SUPPLIED AND DELI□ERED TO THE PROFESSIONAL.

21. INSTALL HANGERS, FLE□IBLE CONNECTIONS, S□ ING □OINTS AND BRACING IN ACCORDANCE □ ITH NFPA 13.

22. SYSTEM PIPING SHALL BE INSTALLED SUCH THAT NO □OINTS, FITTINGS OR DE□ICES OCCUR DIRECTLY O□ER ELECTRICAL E□UIPMENT OR □ ITHIN THE CLEARANCE SPACE AS RE□UIRED BY THE NATIONAL ELECTRIC CODE □NEC□.

23. IMPAIRMENTS OF E□ISTING FIRE PROTECTION SYSTEMS SHALL BE MINIMI□ED, COORDINATED □ ITH THE PROFESSIONAL AND PERFORMED IN ACCORDANCE □ ITH NFPA 25. ALL E□ISTING FIRE PROTECTION SYSTEMS SHALL BE RESTORED TO SER□ICE AT THE END OF EACH □ OR□ING DAY.

24. THE □ OR□ PERFORMED ON THIS PRO□ECT OCCURS □ ITHIN AN E□ISTING BUILDING. ALL E□UIPMENT AND MATERIAL TO BE FURNISHED AND INSTALLED ON THE PRO□ECT SHALL BE COORDINATED □ ITH THE SPACE CONSTRAINTS. ALL E□UIPMENT AND MATERIAL SHALL BE FABRICATED SUCH THAT COMPLETE SYSTEMS MAY BE BRO□EN DO□ NI INTO SECTION SUITABLE FOR LIFTING AND FITTING THROUGH PASSAGE□ AYS □ITHOUT MODIFCATION TO THE BUILDING UNLESS OTHER□ ISE NOTED, OR OTHER ARRANGEMENTS ARE MADE □ ITH THE PROFESSIONAL.

25. THE CONTACTOR SHALL BE RESPONSIBLE FOR ALL OPENINGS AND PENETRATIONS RE□UIRED FOR THE FIRE PROTECTION PIPING.

26. CUTTING STRUCTURAL MEMBERS FOR THE PASSING OF FIRE PROTECTION PIPING OR PIPE HANGER FASTENING □ ILL NOT BE PERMITTED E□CEPT □ ITH APPRO□AL OF THE PROFESSIONAL.

27. SUITABLE MEANS SHALL BE PRO□IDED AT EACH HOLE OR PENETRATION TO MAINTAIN THE DESIGNED FIRE RESISTANCE RATING OF THE □ ALL, CEILING, OR FLOOR ASSEMBLY.

28. INSTALL SPLIT □ ALL PLATES OR ESCUTCHEONS □ HERE E□POSED PIPING PASSES THROUGH A FINISHED FLOOR, □ ALL OR CEILING. THEY SHALL FIT SNUGLY AROUND PIPING. THE FINISH OF ESCUTCHEONS OR □ ALL PLATES SHALL MATCH THE COLOR OF AD□ACENT □ ALLS, CEILINGS, OR FLOORS.

29. UPON COMPLETION OF INSTALLATION AND □ HILE PIPING IS STILL E□POSED, HYDROSTATICALLY TEST THE SYSTEMS AT 200 PSI □OR 50 PSI IN E□CES OF THE SYSTEM □ OR□ING PRESSURE, □ HICHE□ ER IS GREATER□ FOR A PERIOD OF 2 HOURS. PORTIONS OF THE SYSTEM MAY BE TESTED AS THEY ARE COMPLETED. SE□ENTY-T□ O HOUR NOTICE SHALL BE GI□EN TO THE PROFESSIONAL AND THE AUTHORITY HA□ING □URISDICTION PRIOR TO ANY TEST. A PRE-INSTALLATION INSPECTION OF PIPE, FITTINGS, AND DE□ICES IS RE□UIRED.

30. SPRIN□LER HEADS INSTALLED IN TILE CEILINGS SHALL BE INSTALLED IN THE CENTER OF THE TILES.

31. SPRIN□LER SYSTEM DRAIN LINES SHALL BE ROUTED AS INDICATED ON FLOOR PLANS AND FULLY COORDINATED □ ITH ALL TRADES SUCH THAT IT A□OIDS THE TRA□EL PATH OF THE O□ERHEAD CRANE . REFER TO SECTION 2 ON SHEET A30□.

32. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL LEA□S.

Fax: (601) 366-6418
ERG# 15-28.2

ELECTRICAL LEGEND

GENERAL NOTES

1. ALL EQUIPMENT AND DEVICES ARE TO BE FLUSH MOUNTED UNLESS OTHERWISE NOTED.
2. DEVICES NOTED AS "GFI" SHALL BE GROUND FAULT CIRCUIT INTERRUPTING DEVICES.
3. DEVICES NOTED AS "WP" SHALL BE WEATHERPROOF WHILE-IN-USE.
4. PROVIDE UNSWITCHED POWER TO EMERGENCY BATTERY PACKS.

LUMINAIRES (See Light Fixture Schedule)

NOTE: THE NUMBER INSIDE THE CIRCLE IS THE CIRCUIT NUMBER. THE LETTER BESIDE THE SYMBOL IS THE FIXTURE TYPE DESCRIBED IN THE LIGHT FIXTURE SCHEDULE.

- 2'X4' RECESSED FIXTURE.
- 2'X4' RECESSED EMERGENCY FIXTURE.
- SURFACE MOUNTED OR SUSPENDED FIXTURE.
- SURFACE MOUNTED OR SUSPENDED EMERGENCY FIXTURE.
- LINEAR RECESSED FIXTURE.
- LINEAR RECESSED EMERGENCY FIXTURE.
- RECESSED CEILING FIXTURE.
- RECESSED EMERGENCY CEILING FIXTURE.
- PENDANT MOUNT FIXTURE.
- CEILING MOUNTED EXIT SIGN. PROVIDE CHEVRONS AS INDICATED BY ARROWS.
- EXIT SIGN WITH EMERGENCY LIGHTING.
- WALL MOUNTED EXIT SIGN. PROVIDE CHEVRONS AS INDICATED BY ARROWS.
- WALL MOUNTED LINEAR FIXTURE.
- WALL MOUNTED EMERGENCY LINEAR FIXTURE.

MISCELLANEOUS

- CEILING MOUNTED JUNCTION BOX.
- WALL MOUNTED JUNCTION BOX.
- FLEXIBLE CONNECTION TO EQUIPMENT.

FIRE ALARM SYSTEM

- MANUAL PULL STATION. MOUNT 48"A.F.F. TO CENTERLINE OF BOX.
- STROBE. MOUNT 80"A.F.F. TO BOTTOM OF BOX.
- COMBINATION HORN AND STROBE. MOUNT 80"A.F.F. TO BOTTOM OF BOX.
- SMOKE DETECTOR.
- THERMAL DETECTOR.
- DUCT SMOKE DETECTOR IN RETURN DUCT.
- DUCT SMOKE DETECTOR IN SUPPLY DUCT.
- ELEVATOR RECALL SMOKE DETECTOR.
- SOUNDER BASE SMOKE DETECTOR.
- SMOKE DETECTOR WITH DETENTION GRADE COVER.
- FACP: FIRE ALARM CONTROL PANEL.
- FAAP: FIRE ALARM ANNUNCIATOR PANEL.
- FS: FLOW SWITCH. COORDINATE EXACT LOCATION WITH SPRINKLER CONTRACTOR.
- TS: TAMPER SWITCH. COORDINATE EXACT LOCATION WITH SPRINKLER CONTRACTOR.
- CONNECTION TO SPRINKLER GONG. COORDINATE EXACT REQUIREMENTS WITH SPRINKLER CONTRACTOR.
- PIV: TAMPER SWITCH. COORDINATE EXACT LOCATION WITH SPRINKLER CONTRACTOR.

SWITCHES

- $: SINGLE-POLE, SINGLE-THROW SWITCH. MOUNT CENTERLINE OF BOX AT 45"A.F.F. UNLESS NOTED OTHERWISE.
- 2P $: DOUBLE-POLE, SINGLE-THROW, 30 AMP SWITCH. MOUNT CENTERLINE OF BOX AT 45"A.F.F. UNLESS NOTED OTHERWISE.
- M $: AUTOMATIC WALL SWITCH. SENSORSWITCH #WSD-PDT OR APPROVED EQUAL. MOUNT CENTERLINE OF BOX AT 45" A.F.F. UNLESS NOTED OTHERWISE.
- $TS: DIGITAL TIME SWITCH WITH ADJUSTABLE RANGE FROM 5 MINUTES TO 12 HOURS. FURNISH WITH AUDIBLE WARNING. SENSORSWITCH #PTS-60 OR APPROVED EQUAL. MOUNT CENTERLINE OF BOX AT 45" A.F.F. UNLESS NOTED OTHERWISE.
- $T: HORSEPOWER RATED SWITCH WITH THERMAL OVERLOADS (MANUAL MOTOR STARTER).
- MD1: PASSIVE INFRARED AND ULTRASONIC DUAL TECHNOLOGY OCCUPANCY SENSOR WITH A 12' RADIAL COVERAGE. CEILING MOUNTED. SENSORSWITCH #CM-PDT-9 OR APPROVED EQUAL.
- MD2: PASSIVE INFRARED AND ULTRASONIC DUAL TECHNOLOGY OCCUPANCY SENSOR WITH A 28' RADIAL COVERAGE. CEILING MOUNTED. SENSORSWITCH #CM-PDT-10 OR APPROVED EQUAL.
- MDC: PASSIVE INFRARED AND ULTRASONIC DUAL TECHNOLOGY OCCUPANCY SENSOR WITH A 2000 SQ. FT. COVERAGE. MOUNT IMMEDIATELY BELOW CEILING. SENSORSWITCH #WV-PDT-16 OR APPROVED EQUAL.
- PP: POWER PACK MOUNTED ABOVE CEILING. SENSORSWITCH #PP20 OR APPROVED EQUAL.
- PP2: DUAL RELAY PACK MOUNTED ABOVE CEILING. SENSORSWITCH #PP20-2P OR APPROVED EQUAL.
- EPP: EMERGENCY LIGHTING BYPASS SHUNT RELAY. SENSORSWITCH #PP16-SHUNT OR APPROVED EQUAL.
- DS: DAYLIGHT SENSOR.
- ELCU: EMERGENCY LIGHTING CONTROL UNIT. EQUAL TO WATTSTOPPER #ELCU-100 OR APPROVED EQUAL.
- PD: POWER PACK WITH WIRELESS AND DIMMING MODULE WITH 0-10V CONTROL MOUNTED ABOVE CEILING. LUTRON #RMJ-5T-DV-B OR APPROVED EQUAL.
- P: POWER PACK WITH WIRELESS MOUNTED ABOVE CEILING. LUTRON #RMJ-16R-DV-B OR APPROVED EQUAL.
- WD: WIRELESS PASSIVE INFRARED OCCUPANCY SENSOR. CEILING MOUNTED. LUTRON #LRF2-OCR2B-P-WH OR APPROVED EQUAL.
- EPD: EMERGENCY LIGHTING CONTROL UNIT WITH DIMMING BYPASS. EQUAL TO LVS CONTROLS #EPC-1-D OR APPROVED EQUAL.
- EPP: EMERGENCY LIGHTING BYPASS SHUNT RELAY. SENSORSWITCH #PP16-SHUNT OR APPROVED EQUAL.
- WDS: WIRELESS DAYLIGHT SENSOR.
- $3RL: WIRELESS THREE BUTTON WITH RAISE-LOWER WALL SWITCH. LUTRON #PJ2-3BRL-GWH-L01

ACCESS CONTROL

- CR: CARD READER.
- ES: ELECTRIC DOOR STRIKE.
- ACP: ACCESS CONTROL PANEL.

INTRUSION DETECTION SYSTEM

- MOTION DETECTOR.
- GB: GLASS BREAK DETECTOR.
- DC: DOOR CONTACT.
- ALARM HORN.
- IDCP: INTRUSION DETECTION CONTROL PANEL.

PAGING SYSTEM

- CEILING SPEAKER.
- SURFACE MOUNT SPEAKER.
- VOLUME CONTROL IN FLUSH MOUNTED BOX ON WALL AT 48"A.F.F.

CONDUIT AND WIRING

- CONDUCTORS IN CONDUIT CONCEALED WITHIN WALL OR CEILING. TIC MARKS INDICATE NUMBER OF CONDUCTORS. THE EQUIPMENT GROUNDING CONDUCTOR IS NOT SHOWN, BUT SHALL BE PROVIDED. SIZE THE EQUIPMENT GROUNDING CONDUCTOR AND THE CONDUIT PER THE NEC. THE ABSENCE OF TIC MARKS SIGNIFIES THAT TWO CONDUCTORS PLUS AN EQUIPMENT GROUNDING CONDUCTOR SHOULD BE PROVIDED. FOR EXAMPLE, THE MARKINGS TO THE LEFT SIGNIFY THAT THREE CONDUCTORS PLUS AN EQUIPMENT GROUNDING CONDUCTOR SHOULD BE PROVIDED.
- #10: THE TEXT INSIDE THE ARC INDICATES THE AWG SIZE OF THE CONDUCTORS THAT SHALL BE RUN IN THE CONDUIT. THE ABSENCE OF TEXT SIGNIFIES THAT THE CONDUCTORS SHOULD BE #12 AWG.
- CIRCUITRY RUN IN STRAIGHT LINE SEGMENTS SIGNIFIES EXPOSED SURFACE-MOUNTED RACEWAY (SEE SPECIFICATIONS).
- CONDUCTORS IN CONDUIT CONCEALED BELOW GRADE OR FLOOR. TIC MARKS INDICATE NUMBER OF CONDUCTORS. THE EQUIPMENT GROUNDING CONDUCTOR IS NOT SHOWN, BUT SHALL BE PROVIDED. SIZE THE EQUIPMENT GROUNDING CONDUCTOR AND THE CONDUIT PER THE NEC. THE ABSENCE OF TIC MARKS SIGNIFIES THAT TWO CONDUCTORS PLUS AN EQUIPMENT GROUNDING CONDUCTOR SHOULD BE PROVIDED. THE MARKINGS TO THE LEFT SIGNIFY THAT THREE CONDUCTORS PLUS AN EQUIPMENT GROUNDING CONDUCTOR SHOULD BE PROVIDED.
- LA-1: HOMERUN TO PANELBOARD. ARC DENOTES CONCEALED CIRCUITRY. TEXT DENOTES PANELBOARD NAME WITH CIRCUIT NUMBER. DEVICES HAVING CIRCUIT NUMBERS LOCATED BESIDE THEM MAY NOT SHOW THE CIRCUIT NUMBERS AT THE HOMERUN ARROWS.
- LA-1: PARTIAL HOMERUN TO PANELBOARD. COMBINE ALL PARTIAL HOMERUNS THAT ARE ON THE SAME CIRCUIT IN A JUNCTION BOX PRIOR TO ENTERING THE PANELBOARD.
- LOW VOLTAGE CONDUCTORS USED FOR MOTION DETECTOR CIRCUITRY. SEE MANUFACTURER'S RECOMMENDATIONS FOR CONDUCTOR REQUIREMENTS.
- 6: CABLE TRAY. NUMBER INDICATES WIDTH OF CABLE TRAY. NO NUMBER INDICATES A DEFAULT WIDTH OF 12"
- CRITICAL BRANCH CONDUCTORS IN CONDUIT CONCEALED WITHIN WALL OR CEILING. TIC MARKS INDICATE NUMBER OF CONDUCTORS. THE EQUIPMENT GROUNDING CONDUCTOR IS NOT SHOWN, BUT SHALL BE PROVIDED. SIZE THE EQUIPMENT GROUNDING CONDUCTOR AND THE CONDUIT PER THE NEC. THE ABSENCE OF TIC MARKS SIGNIFIES THAT TWO CONDUCTORS PLUS AN EQUIPMENT GROUNDING CONDUCTOR SHOULD BE PROVIDED. FOR EXAMPLE, THE MARKINGS TO THE LEFT SIGNIFY THAT TWO #12 AWG CONDUCTORS PLUS AN EQUIPMENT GROUNDING CONDUCTOR SHOULD BE PROVIDED.

VOLTAGE DROP CHART FOR 20A, 1Ø CIRCUITS

Voltage	Circuit Length	Conductor Size (AWG)
120	< 90'	#12
120	> 90'	#10
120	> 145'	#8
120	> 230'	#6
277	< 200'	#12
277	> 200'	#10
277	> 325'	#8
277	> 525'	#6

VOLTAGE DROP CHART NOTES:

1) CIRCUIT SIZES INDICATED ON THE DRAWINGS ARE MINIMUM REQUIREMENTS. REFER TO THIS CHART FOR UPSIZING CONDUCTORS AS NEEDED.

2) DO NOT CONNECT CONDUCTORS LARGER THAN #10 DIRECTLY TO A RECEPTACLE OR A SWITCH. PROVIDE A JUNCTION BOX TO DOWNSIZE THE CONDUCTOR TO #12 AT THE DEVICE.

3) FOR CIRCUITS LONGER THAN THOSE LISTED ABOVE, CONSULT WITH THE ENGINEER FOR CONDUCTOR SIZES.

RECEPTACLES

- DUPLEX RECEPTACLE, NEMA 5-20R, MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE.
- SWITCHED DUPLEX RECEPTACLE, NEMA 5-20R, MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE.
- DUPLEX RECEPTACLE, NEMA 5-20R, MOUNTED WITH BOTTOM OF BOX 2" ABOVE COUNTER WITH BACKSPLASH AND 6" ABOVE COUNTER WITHOUT BACKSPLASH. WHERE RECEPTACLE IS SHOWN IN AN AREA WITH NO COUNTER, MOUNT 45"A.F.F. TO CENTERLINE OF BOX.
- SWITCHED DUPLEX RECEPTACLE, NEMA 5-20R, MOUNTED WITH BOTTOM OF BOX 2" ABOVE COUNTER WITH BACKSPLASH AND 6" ABOVE COUNTER WITHOUT BACKSPLASH. WHERE RECEPTACLE IS SHOWN IN AN AREA WITH NO COUNTER, MOUNT 45"A.F.F. TO CENTERLINE OF BOX.
- DOUBLE DUPLEX RECEPTACLE, NEMA 5-20R, ONE COVER PLATE, MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE.
- DOUBLE DUPLEX RECEPTACLE, NEMA 5-20R, ONE COVER PLATE, MOUNTED WITH BOTTOM OF BOX 2" ABOVE COUNTER WITH BACKSPLASH, AND 6" ABOVE COUNTER WITHOUT BACKSPLASH. WHERE RECEPTACLE IS SHOWN IN AN AREA WITH NO COUNTER, MOUNT 45"A.F.F. TO CENTERLINE OF BOX.
- DOUBLE DUPLEX RECEPTACLE, NEMA 5-20R, ONE COVER PLATE, MOUNTED WITH BOTTOM OF BOX 2" ABOVE COUNTER WITH BACKSPLASH, AND 6" ABOVE COUNTER WITHOUT BACKSPLASH. WHERE RECEPTACLE IS SHOWN IN AN AREA WITH NO COUNTER, MOUNT 45"A.F.F. TO CENTERLINE OF BOX. ONE DUPLEX RECEPTACLE WILL BE SWITCH AND ONE DUPLEX RECEPTACLE WILL BE UNSWITCHED.
- DOUBLE DUPLEX RECEPTACLE, NEMA 5-20R, ONE COVER PLATE, MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE. ONE DUPLEX RECEPTACLE WILL BE SWITCH AND ONE DUPLEX RECEPTACLE WILL BE UNSWITCHED.
- DF: DUPLEX RECEPTACLE, NEMA 5-20R, FOR DRINKING FOUNTAIN FED FROM GFCI BREAKER. MOUNTED IN ACCORDANCE WITH MANUFACTURER'S ROUGH-IN REQUIREMENTS. VERIFY CONNECTION TYPE PRIOR TO BID. PROVIDE PROPER EQUIPMENT FOR CONNECTION TYPE REQUIRED.
- 20A WIRELESS RELAY POWER PACK MOUNTED ABOVE CEILING. LUTRON RMJ-H20R-DV-B OR APPROVED EQUAL.

COMMUNICATIONS (Cable Pulled in Contract)

- DOUBLE DUPLEX RECEPTACLE, NEMA 5-20R AND A COMBINATION TELEPHONE/DATA OUTLET MOUNTED IN A FLOOR BOX. COMMUNICATION OUTLET SHALL HAVE ONE TELEPHONE JACK AND ONE DATA JACK UNLESS NOTED OTHERWISE.
- V/D: DOUBLE DUPLEX RECEPTACLE, NEMA 5-20R, A COMBINATION TELEPHONE/DATA OUTLET, AND HDMI AND VGA OUTLET MOUNTED IN A FLOOR BOX.

CCTV SYSTEM

- CEILING MOUNTED CAMERA.
- WALL MOUNTED CAMERA.
- DGH: INSIDE CORNER MOUNTED CAMERA IN DETENTION GRADE HOUSING.
- OUTSIDE CORNER MOUNTED CAMERA.
- TELEVISION CABLE OUTLET MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE.

GEAR

- NON-FUSED DISCONNECT SWITCH. TEXT INDICATES AMPACITY/NUMBER OF POLES/ENCLOSURE TYPE.
- MAGNETIC MOTOR STARTER.
- PANELBOARD.
- MOTOR.

COMMUNICATIONS

- COMBINATION TELEPHONE/DATA OUTLET MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE.
- COMBINATION TELEPHONE/DATA OUTLET MOUNTED WITH BOTTOM OF BOX 2" ABOVE COUNTER WITH BACKSPLASH, AND 6" ABOVE COUNTER WITHOUT BACKSPLASH.
- TELEPHONE OUTLET MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE.
- TELEPHONE OUTLET MOUNTED WITH BOTTOM OF BOX 2" ABOVE COUNTER WITH BACKSPLASH, AND 6" ABOVE COUNTER WITHOUT BACKSPLASH.
- DATA OUTLET MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE.
- DATA OUTLET MOUNTED WITH BOTTOM OF BOX 2" ABOVE COUNTER WITH BACKSPLASH, AND 6" ABOVE COUNTER WITHOUT BACKSPLASH.
- DOUBLE DUPLEX RECEPTACLE, NEMA 5-20R AND A COMBINATION TELEPHONE/DATA OUTLET MOUNTED IN A FLOOR BOX.
- V/D: DOUBLE DUPLEX RECEPTACLE, NEMA 5-20R, A COMBINATION TELEPHONE/DATA OUTLET, AND A MICROPHONE OUTLET MOUNTED IN A FLOOR BOX.
- TELEVISION CABLE OUTLET MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE.
- FLUSH WALL MOUNTED JUNCTION BOX WITH FLUSH COVER. VERIFY FINISH COLOR WITH ARCHITECT. VERIFY LOCATION WITH OWNER AND FURNITURE PLAN.

NOTES:

1. HOMERUN CONDUITS SHALL BE SIZE 3/4" OR LARGER.
2. CONDUITS SHALL BE LIMITED TO THREE CURRENT CARRYING CONDUCTORS.
3. PROVIDE TYPEWRITTEN CIRCUIT DIRECTORIES INSIDE DOOR OF EACH PANELBOARD. EACH CIRCUIT SHALL BE DISTINGUISHED FROM ALL OTHERS.
4. PROVIDE A LABEL FOR ALL SWITCHGEAR, SWITCHBOARDS, MOTOR CONTROL CENTERS, PANELBOARDS, AND OTHER SERVICE EQUIPMENT THAT LEGIBLY DISPLAYS THE MAXIMUM AVAILABLE FAULT CURRENT. THE MAXIMUM FAULT CURRENT INFORMATION SHALL BE TAKEN FROM THE ARC FLASH/PROTECTIVE DEVICE COORDINATION STUDY PERFORMED BY THE GEAR MANUFACTURER. THE LABEL SHALL INCLUDE THE DATE THAT THE FAULT CURRENT CALCULATION WAS PERFORMED AND BE OF SUFFICIENT DURABILITY TO WITHSTAND THE ENVIRONMENT OF THE EQUIPMENT.

Scale: 1/8" = 1'- 0"

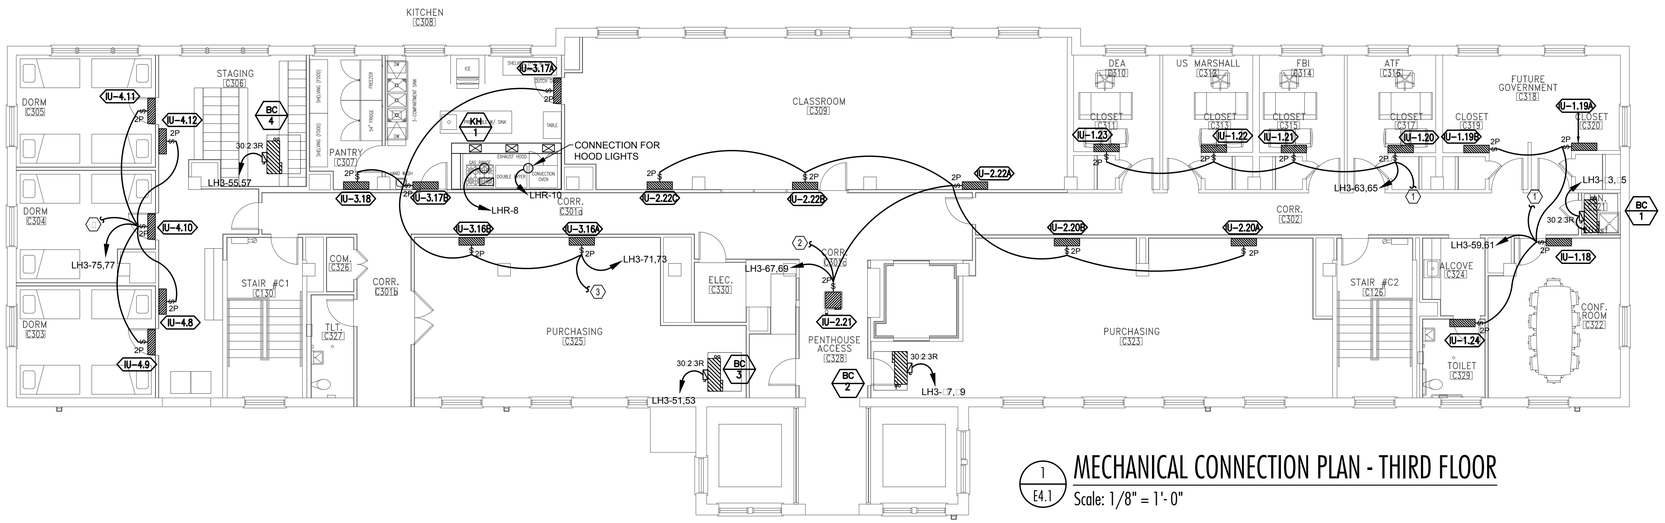
3 E4.1 MECHANICAL PLAN - PENTHOUSE

Scale: 1/8" = 1'- 0"



4 E4.1 EQUIPMENT SHUTDOWN DETAIL FOR FIRE SUPPRESSION SYSTEM

Scale: 1/8" = 1'- 0"

NOTE:

PROVIDE A SUPERVISED CIRCUIT FROM THE FIRE ALARM PANEL TO MONITOR THE VENT HOOD FIRE SUPPRESSION SYSTEM. UPON AN ALARM CONDITION OF THE FIRE ALARM SYSTEM, THE FIRE ALARM SYSTEM SHALL CAUSE THE SHUNT TRIP BREAKERS TO TRIP ALL ELECTRICAL APPLIANCES UNDER THE HOOD, AND ON THE SUPPLY AND EXHAUST FANS IN THE HOOD. SOME HOODS ARE UL LISTED TO OPERATE WITH THE EXHAUST FAN RUNNING IN THE ALARM CONDITION. VERIFY THAT THIS IS NOT THE CASE BEFORE CIRCUITING THIS UNIT TO SHUNT TRIP THE EXHAUST FAN BREAKER. THE FIRE ALARM PANEL SHALL ALSO PROVIDE POWER TO A RELAY THAT IN TURN HOLDS THE GAS SOLENOID VALVE, FURNISHED BY THE MECHANICAL CONTRACTOR, OPEN UNDER NORMAL CONDITIONS. AN ALARM CONDITION OF THE FIRE ALARM SYSTEM SHALL RELEASE THE POWER TO THIS SOLENOID CAUSING THE GAS TO THE EQUIPMENT UNDER THE VENT HOOD TO SHUT OFF. SEE DETAIL ON THIS SHEET.

T1.0

GENERAL NOTES

00 - PROCUREMENT AND CONTRACTING

0.1 REVIEW BY ALL PARTIES: CONTRACTOR SHALL ENSURE THAT ALL SUBCONTRACTORS AND SUPPLIERS REVIEW AND ABIDE BY THE TERMS OF THESE GENERAL NOTES FOR CONTRACT COMPLIANCE.

0.2 RELATIONSHIP TO CONSTRUCTION DOCUMENTS: GENERAL NOTES ARE MEANT TO COMPLIMENT AND/OR EMPHASIZE INFORMATION PRESENTED IN THE CONTRACT DOCUMENTS. THE CONTRACTOR SHALL NOTIFY THE ARCHITECT WHERE A CONFLICT ARISES BETWEEN THE FOLLOWING GENERAL NOTES AND REMAINING CONTRACT DOCUMENTS DURING BIDDING AND FOR THE DURATION OF THE PROJECT. IF A CONFLICT ARISES DURING BIDDING THAT CANNOT BE LEGALLY CLARIFIED BY THE ARCHITECT, THE CONTRACTOR SHALL BASE THE BID ON THE MOST EXPENSIVE COMBINATION OF QUALITY AND QUANTITY OF WORK INDICATED.

0.3 KEYED NOTES: WHERE PROVIDED, NUMBERED NOTES ARE KEYED ON THE DRAWINGS TO DEMONSTRATE AN EXAMPLE OF A PARTICULAR CONDITION AT THE TIME OF DRAWING PREPARATION AND ARE NOT INCLUSIVE OF ALL INSTANCES OF THAT CONDITION, AND THUS MAY ALSO APPLY AS GENERAL NOTES FOR SITUATIONS OF THE SAME CONDITION.

01 - GENERAL REQUIREMENTS

1.1. FIELD CONDITIONS DURING BIDDING: CONTRACTOR SHALL PAY VERY CLOSE ATTENTION TO FIELD CONDITIONS DURING BIDDING TO ENSURE THAT ALL CONDITIONS ARE ACCOUNTED FOR AT THAT TIME. KNOWN OMISSIONS AND ERRORS BY THE A CONTRACTOR OR A SUBCONTRACTOR SHALL BE BROUGHT TO THE ARCHITECT'S ATTENTION FOR CLARIFICATION PRIOR TO BIDDING.

1.2. PUBLIC SAFETY: THE CONTRACTOR SHALL COORDINATE WITH THE JURISDICTION HAVING AUTHORITY TO ENSURE PUBLIC SAFETY AROUND THE CONSTRUCTION LIMITS AT ALL TIMES.

1.3. CONTRACTOR/SUBCONTRACTOR COORDINATION: ALL SUBCONTRACTORS (INCLUDING BUT NOT LIMITED TO HVAC, PLUMBING, FIRE SPRINKLER, AND ELECTRICAL) SHALL BE BOUND TO THE DESIGN AS INDICATED ON ARCHITECTURAL DRAWINGS, ENGINEERING DRAWINGS, SUPPLEMENTAL INSTRUCTIONS AND SHOP DRAWINGS. WHERE A CONFLICT ARISES BETWEEN THE THOSE DOCUMENTS, THE SUBCONTRACTOR SHALL COORDINATE WITH THE GENERAL CONTRACTOR PRIOR TO EXECUTION OF WORK TO DETERMINE A SOLUTION AND THE GENERAL CONTRACTOR SHALL INVOLVE THE ARCHITECT AS NECESSARY.

1.4. COORDINATION W/ OWNER'S CONTRACTORS: CONTRACTOR IS RESPONSIBLE FOR COORDINATING OWNER SUPPLIED CONTRACTORS (SECURITY EQUIPMENT, TELEPHONE EQUIP., FURNITURE, ETC.) SO THAT CONFLICTS DO NOT OCCUR BETWEEN TRADES AND SCHEDULING.

1.5. ADA: ALL PHYSICAL PROPERTIES OF THE BUILDING WITHIN THE CONTRACT LIMITS MUST COMPLY WITH THE AMERICANS WITH DISABILITIES ACT - ACCESSIBILITY GUIDELINES (ADA-AG).

1.6. MOCK-UPS FOR APPROVAL: THE CONTRACTOR SHALL PROVIDE MOCK-UPS AS DIRECTED IN THE DRAWINGS AND SPECIFICATIONS FOR REVIEW BY THE OWNER, ARCHITECT, AND APPLICABLE ENGINEERS AND CONSULTANTS, IN A SINGLE PRESENTATION. WHEN POSSIBLE, MEASURES TO CORRECT UNAPPROVED SAMPLES SHALL BE COMPLETED IMMEDIATELY TO AVOID AN ADDITIONAL ON-SITE INSPECTION BY THE GROUP. THE CONTRACTOR SHALL INCUR ANY ADDITIONAL COSTS ARISING OUT OF THE NECESSITY OF RESCHEDULING AN ADDITIONAL REVIEW BY SAID GROUP AS A RESULT OF THE CONTRACTOR'S FAILURE TO PROVIDE THE REQUESTED SAMPLES AS DIRECTED. AMPLE NOTICE (NO LESS THAN 5 CALENDAR DAYS) SHALL BE GIVEN TO THE ARCHITECT THAT THE SAMPLES ARE READY TO BE REVIEWED. IN SOME CASE, APPROVED MOCK-UPS CAN REMAIN PART OF THE WORK. SEE SPECIFICATIONS FOR ADDITIONAL SAMPLE AND MOCK-UP REQUIREMENTS.

1.7. DIMENSIONS: CONTRACTOR TO VERIFY ALL DIMENSIONS.

1.8. ANGLES: ALL ANGLES ARE 45 AND 90 DEGREES, UNLESS NOTED OTHERWISE.

1.9. CONSTRUCTION LIMITS: THE CONTRACTORS MUST KEEP THEIR EMPLOYEES WITHIN THE DEFINED, CONTROLLED CONSTRUCTION LIMITS AT ALL TIMES OR AS DIRECTED BY THE GENERAL CONTRACTOR. THE GENERAL CONTRACTOR WILL BE RESPONSIBLE TO KEEP THE OWNER AND ARCHITECT INFORMED OF ANY OCCASIONS WHEN WORKERS NEED TO BE OUTSIDE THE CONSTRUCTION LIMITS. A SIX-FOOT HIGH CHAIN LINK CONSTRUCTION FENCE IS REQUIRED AROUND THE PERIMETER OF THE CONSTRUCTION LIMITS. TWELVE-FOOT WIDE, IN-SWINGING, LOCKABLE GATES ARE REQUIRED AT CONSTRUCTION LIMIT ACCESS POINTS.

1.10. BUILDING LAYOUT: CONTRACTOR SHALL STAKEOUT ENTIRE BUILDING LAYOUT AND ALL IMPROVEMENTS FOR APPROVAL BY THE ARCHITECT AND OWNER BEFORE BEGINNING WORK. ALL DISCREPANCIES TO BE DISCUSSED AND ADJUSTED AT THAT MEETING.

1.11. FINISH FLOOR ELEVATIONS: ARCHITECT AND CIVIL ENGINEER MUST APPROVE FINISH FLOOR ELEVATION/BUILDING LOCATION PRIOR TO SETTING FORM WORK.

02 - EXISTING CONDITIONS

2.1. VERIFY EXISTING CONDITIONS: THE CONTRACTOR SHALL VERIFY EXISTING BUILDING AND SITE CONDITIONS AS THEY RELATE TO THE CONSTRUCTION DOCUMENTS AND REPORT ANY AND ALL DISCREPANCIES TO THE ARCHITECT IN WRITING AND IN A TIMELY MANNER.

2.2. SITE DEMOLITION: CONTRACTOR SHALL BE RESPONSIBLE FOR THE REMOVAL OR MODIFICATION OF ANY AND ALL EXISTING CONDITIONS REQUIRED TO ACCOMPLISH WORK.

2.3. EXISTING TREE PROTECTION: ALL EXISTING TREES NOTED TO REMAIN ARE TO BE PROTECTED. CONTRACTOR SHALL PROVIDE CHAIN LINK FENCE AT A 15' RADIUS AROUND THE TREE TRUNK AND PAINT ON THE GROUND, WITH GREEN SURVEYING PAINT, AN OUTLINE OF THE TREE CANOPY ABOVE. SHOULD IT EXCEED 15'. AREAS INSIDE OF THE FENCING AND WITHIN THE GREEN PAINT ARE NOT TO BE USED FOR PERMANENT STORAGE OF MATERIAL OR EQUIPMENT OR VEHICLE PARKING. SHOULD DAMAGE OCCUR TO TREES SCHEDULED TO BE PROTECTED DUE TO INADEQUATE TREE PROTECTION, THE CONTRACTOR SHALL CONSULT WITH A PROFESSIONAL ARBORIST TO REMEDY THE SITUATION AND/OR REPLACE THE TREE WITH A NEW SPECIMEN EQUAL IN SPECIES AND SIZE. IN THE EVENT OF REPLACEMENT, THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE FULL ESTABLISHMENT OF THE TREE.

2.4. TREE AND STUMP REMOVAL: REMOVE ALL TREES AND STUMPS WITHIN 10' OF BUILDING UNLESS MARKED FOR PROTECTION. REVIEW ALL TRESS MARKED FOR REMOVAL WITH ARCHITECT PRIOR TO CUTTING (SEE SITE PLAN).

03 - CONCRETE

3.1. EXPOSED CONCRETE: ALL EXPOSED CONCRETE SURFACES SHALL RECEIVE A RUBBED FINISH TO CREATE A SMOOTH, UNIFORM APPEARANCE AND SHALL HAVE A MIN. 1/2" RADIUS ON ALL EXPOSED CORNER CONDITIONS.

3.2. CONCRETE BLOCK-OUTS: CONTRACTOR TO VERIFY ALL REQUIRED BLOCK-OUTS IN CONCRETE CONSTRUCTION DURING THE SHOP DRAWINGS PHASE AND/OR BEFORE CONCRETE POURS ARE ORDERED. CONTRACTOR SHALL PROVIDE BLOCK-OUTS IN ALL CONCRETE CONSTRUCTION FOR ALL ITEMS SHOWN ON ARCHITECTURAL, STRUCTURAL, AND MEP DRAWINGS AS BEING "RECESSED" OR FOR ITEMS SHOWN PENETRATING CONCRETE.

3.3. CONCRETE WORK: VIBRATE ALL CONCRETE IN BEAMS, PARTICULARLY AT THE RECESSES AROUND PERIMETER, TO ELIMINATE HONEYCOMBS.

04 - MASONRY

4.1. MASONRY EXPANSION JOINTS: WHERE NOT SHOWN OF DRAWINGS, MASONRY EXPANSION JOINTS ARE TO BE LOCATED 50'-0" APART MAXIMUM AND NO MORE THAN 25'-0" FROM BUILDING CORNERS. PLACE REQUIRED EXPANSION JOINTS AT INSIDE CORNERS WHERE POSSIBLE. HORIZONTAL EXPANSION JOINTS ARE REQUIRED AT ALL FLOORS WHERE STRUCTURAL RELIEF ANGLES ARE USED. MASONRY EXPANSION JOINTS ARE TO BE LOCATED TO LIMIT MASONRY AREA TO A MAXIMUM OF 500 SQ. FT. UNLESS OTHERWISE DIRECTED. THE CONTRACTOR SHALL COORDINATE ALL OF THE EXPANSION JOINT LOCATIONS WITH THE ARCHITECT AND STRUCTURAL ENGINEER BEFORE STARTING MASONRY WORK.

4.2. WEEPS: ALL MASONRY WEEPS ARE TO BE FULL OPEN HEAD JOINTS WITH PLASTIC INSERTS AT A MAXIMUM OF 24 INCHES ON CENTER. COORDINATE MASONRY CONSTRUCTION WITH "MORTAR NET" APPLICATION IN CAVITY WALLS AT ALL WALL FLASHING LOCATIONS.

4.3. MASONRY REINFORCING: ALL MASONRY WALL TIES SHALL BE SPACED A MAXIMUM OF 16" OC VERTICAL AND 16" OC HORIZONTAL. WALL TIE LOCATIONS THAT FALL NEXT TO CONCRETE COLUMNS REQUIRE THE USE OF DOVETAIL EMBED ANCHORS AND WALL TIES THAT FALL NEXT TO STEEL BEAMS REQUIRE THE USE OF SCREW APPLIED WALL ANCHORS. SEE STRUCTURAL DRAWINGS FOR ADDITIONAL REINFORCING REQUIREMENTS AND SPECIFICATIONS.

4.4. MASONRY LINTELS: PROVIDE LINTELS AT ALL MASONRY OPENINGS AS SHOWN IN STRUCTURAL DRAWINGS.

4.5. BOND COURSES: PROVIDE CONTINUOUS BOND COURSES AS SHOWN IN STRUCTURAL DRAWINGS.

4.6. DEFECTIVE MASONRY: BROKEN, CHIPPED, OR CRACKED CONCRETE MASONRY UNITS SHALL NOT BE USED IN THIS PROJECT.

05 - METALS

5.1. STEEL FINISH: ALL EXPOSED STEEL IS TO BE HOT DIPPED GALVANIZED OR SS.

5.2. EXTERIOR FASTENERS: USE HOT DIP GALVANIZED OR SS FASTENERS AT ALL EXTERIOR CONDITIONS. CONTRACTOR SHALL CONFIRM THAT ALL FASTENERS SUIT LOAD AND CONDITIONS.

5.3. MISCELLANEOUS STEEL: CONTRACTOR SHALL PROVIDE FOR ALL MISCELLANEOUS STEEL IN CONTRACT. NOT ALL STRUCTURAL AND MISCELLANEOUS STEEL IS SHOWN IN ARCHITECTURAL DRAWINGS AND NOT ALL MISCELLANEOUS STEEL IS SHOWN IN STRUCTURAL DRAWINGS. SOME BUILDING COMPONENTS AND SYSTEMS INCLUDING BUT NOT LIMITED TO PLUMBING FIXTURES, MECHANICAL UNITS, LIGHT FIXTURES, GUARDRAILS, WINDOWS, SIGNAGE, TOILET PARTITIONS, SPECIAL WALL CONDITIONS, EAVE, RAKE, WINDOW & DOOR FRAMING, ETC. MAY REQUIRE MISCELLANEOUS STEEL NOT SHOWN IN THE DRAWINGS.

5.4. STEEL DETAILING: CONTRACTOR TO VERIFY LOCATIONS AND SIZES OF ALL ROOF PENETRATIONS WITH MECHANICAL, STRUCTURAL, AND ARCHITECTURAL DRAWINGS AND VERIFY THAT STRUCTURAL STEEL MEETS THE UL ASSEMBLY SPECIFIED BEFORE DETAILING STEEL.

5.5. GUARDRAIL LOAD DESIGN: ALL GUARDRAILS ARE TO BE DESIGNED TO WITHSTAND THE REQUIREMENTS STATED IN THE MOST RECENT AND APPLICABLE BUILDING CODE. SEE LIFE SAFETY REVIEW IN DRAWINGS.

5.6. HANDRAILS: UNLESS NOTED OTHERWISE, ALL HANDRAILS ARE TO BE 1-1/4" OD (WOOD AND STEEL).

5.7. METAL STUDS: ALL METAL STUDS ARE 16" O.C. UNLESS NOTED OTHERWISE, SIZES AND GAUGES ARE SHOWN ON DRAWINGS OR IN SPECIFICATIONS.

06 - WOOD & PLASTICS

6.1. WOOD STUDS: WOOD WALL STUDS SHALL BE 16" OC UNLESS NOTED OTHERWISE.

6.2. WOOD BLOCKING: PROVIDE BLOCKING AND SOLID GROUNDS FOR ALL EQUIPMENT, ACCESSORIES SUCH AS: FIXTURES, TOILET PARTITIONS, WALL MOUNTED DOOR STOPS, HARDWARE, SHELVING, CABINETS, APPLIANCES, PLUMBING FIXTURES, ETC.

6.3. BLOCK-OUTS IN STUD WALLS: COORDINATE WITH ARCHITECTURAL, MECHANICAL, ELECTRICAL, AND STRUCTURAL FOR REQUIRED ROUGH-IN DIMENSIONS. PROVIDE STUD SPACING, BLOCKS, ETC. TO SUIT VARIOUS EQUIPMENT, REGISTERS, GRILLES, ETC. TO BE BUILT-IN. FORM HEADERS TO ADEQUATELY SUIT SPANS WHERE REQUIRED.

6.4. TREATED WOOD: ALL WOOD IN CONTACT WITH EARTH, MASONRY, CONCRETE OR STEEL SHALL BE PRESSURE PRESERVATIVE TREATED (PT), SEE SPECS AND DRAWINGS.

07 - THERMAL PROTECTION

7.1. MOLD AND MILDEW PLAN: THE CONTRACTOR WILL PROVIDE A COMPLETE PHOTOGRAPHIC RECORD OF THE ENTIRE INSTALLATION PROCESS AND COMPLETED INSTALLATION OF ALL BELOW AND ABOVE GRADE WATERPROOFING SYSTEM INSTALLATION, INCLUDING BUT NOT LIMITED TO, UNDER SLAB, SUB GRADE WALLS, ABOVE GRADE WALLS, WINDOWS, DOORS, PARAPETS, ROOF, ETC. BEFORE COVERING UP WITH FINISH MATERIAL. ALL PHOTOGRAPHS SHALL BE DATE-STAMPED WITH LOCATIONS NOTED ON THE AS-BUILT SET OF DRAWINGS. PHOTOGRAPHIC COVERAGE SHALL AT LEAST INCLUDE 50% OF EACH INSTALLED WATERPROOFING SYSTEM.

7.2. WATER TESTING AND RECORDS: THE CONTRACTOR SHALL PROVIDE WATER TESTING OF THE ENTIRE BUILDING ENVELOPE WATER PROTECTION SYSTEM WHICH INCLUDES BUT IS NOT LIMITED TO UNDER SLAB, SUB GRADE WALLS, ABOVE GRADE WALLS AND WINDOWS, FLASHING, AND ROOF CONSTRUCTION, IN A TIMELY MANNER AND AS DIRECTED BY THE ARCHITECT AND CXA (WHEN APPLICABLE). ANY DEFICIENCIES DISCOVERED WILL BE CORRECGRAPHS SHALL BE DATE-STAMPED WITH LOCATIONS NOTED ON THE AS-BUILT SET OF DRAWINGS. PHOTOGRAPHIC COVERAGE SHALL AT LEAST INCLUDE 50% OF EACH INSTALLED WATERPROOFING SYSTEM. (INCLUDING REPLACING ANY DAMAGED MATERIALS) AND RETESTED PRIOR TO BEGINNING MASONRY INSTALLATION.

7.3. INSULATION AND VAPOR BARRIERS: THE CONTRACTOR IS RESPONSIBLE FOR MAINTAINING THE CONTINUITY OF THE BUILDING INSULATION AND VAPOR BARRIERS WHEN SEPARATING CONDITIONED, UNCONDITIONED, AND SEMI-CONDITIONED SPACES. UNLESS NOTED OTHERWISE CONTRACTOR SHALL PROVIDE:

- ON EXTERIOR CMU: 2" R10 RIGID INSULATION ON EXTERIOR SIDE
- ON EXTERIOR METAL OR WOOD STUDS: 6" R19 BLANKET INSULATION WITHIN STUD SPACING
- IN ATTIC: 9-1/2" R30 BLANKET INSULATION THROUGHOUT ATTIC (AT CEILING AND ROOF DECK)

7.1. ROOF PENETRATIONS: WHERE PLUMBING, MECHANICAL, ELECTRICAL DEVICES AND EQUIPMENT PENETRATE ROOF, PROVIDE FLASHING CAPS, ROOFING MASTIC AND MEMBRANES AS REQUIRED TO MAKE PENETRATIONS THOROUGHLY WATERTIGHT. USE MATERIALS COMPATIBLE WITH ROOF MATERIAL. PROTECT VENTS FROM ULTRAVIOLET LIGHT AS RECOMMENDED BY MANUFACTURER. ALL PENETRATIONS IN ROOF CONSTRUCTION TO BE PERFORMED BY A QUALIFIED ROOFING CONTRACTOR AND AS PART OF THE ROOF WARRANTY. NO PENETRATIONS ARE TO BE PERFORMED BY PLUMBERS OR OTHER NON-ROOFING SUBCONTRACTORS.

7.2. SHEET METAL WORK: ALL SHEET METAL WORK INCLUDING METAL GAUGE THICKNESS, WALL FLASHING, GUTTERS, DOWN SPOUTS, EXPANSION JOINTS, FASCIA METAL, ETC. SHALL COMPLY WITH THE STANDARDS AND RECOMMENDED PRACTICES OF THE SHEET METAL AND AIR-CONDITIONING CONTRACTORS NATIONAL ASSOCIATION. (SMACNA)

7.3. GUTTER EXPANSION JOINTS: GUTTER EXPANSION JOINTS ARE REQUIRED AT A MAXIMUM OF 50'-0."

7.4. METAL FLASHING FINISH: ALL METAL ROOF AND WALL FLASHING, EDGE STRIPS, EXTERIOR TRIM, DOWN SPOUTS, GUTTERS SHALL BE FACTORY FINISHED AND COMPATIBLE WITH SPECIFIED ROOFING SYSTEM (WHERE APPLICABLE). CONTRACTOR SHALL PROVIDE ARCHITECT WITH MANUFACTURER'S COLOR SAMPLES FOR APPROVAL.

7.5. WALL OPENING FLASHING: PROVIDE FLASHINGS ON ALL SIDES OF ALL WINDOW, DOOR AND LOUVER PENETRATIONS INCLUDING HEAD FLASHINGS AND WEEPS, JAMB FLASHINGS TO ALLOW MOISTURE TO FALL VERTICALLY TO SILL FLASHING, AND SILL FLASHINGS WITH END DAMS AND WEEPS.

7.6. CAVITY WALL FLASHING: THRU-WALL MEMBRANE FLASHING IS REQUIRED IN ALL MASONRY CAVITY WALL CONDITIONS WHERE THE WATER MUST BE DIRECTED OUT OF THE CAVITY WALL SPACE. IT IS CRITICAL THAT THE CONTRACTOR VERIFY THAT THE THRU-WALL FLASHING IS COORDINATED WITH THE OTHER TRADES SO THAT THE INTEGRITY OF THE TOTAL FLASHING SYSTEM WORKS AS DESIGNED AND THAT ALL FLASHING PIECES ARE IN THE RIGHT LOCATION TO DIRECT WATER OUT OF THE BUILDING.

7.7. UL APPROVED STANDARDS: THE CONTRACTOR AND SUBCONTRACTOR ARE TO PROVIDE THE ARCHITECT WITH A WRITTEN GUARANTEE THAT THE SPECIFIED AMOUNTS OF FIREPROOFING AND FIRESTOPPING ARE INSTALLED PROPERLY TO MEET APPLICABLE CODES AND UL APPROVED CONSTRUCTION STANDARDS.

7.8. JOINT SEALANTS: PROVIDE CAULKING AND/OR SEALANT AT ALL CRACKS AND INTERSECTIONS OF MATERIALS WHERE WEATHER-TIGHTNESS OR INSECT CONTROL IS NEEDED OR WHERE APPEARANCE IS IMPORTANT. INTENT IS A NEAT, WEATHER TIGHT, FINISHED PROJECT AT ALL LOCATIONS.

7.9. SEALANT COLORS: ALL EXTERIOR SEALANT COLOR IS TO MATCH THE MORTAR COLOR OF MASONRY CONSTRUCTION. INCLUDE A SAMPLE WITH MASONRY MOCK-UP FOR APPROVAL. ALL INTERIOR CAULK COLORS ARE TO MATCH ADJACENT PAINT OR MATERIAL COLORS OR BE PAINTABLE.

7.10. EXPANSION JOINTS: PROVIDE FOR EXPANSION JOINTS AND COVERS WHERE NEEDED IN ALL MATERIALS.

08 - DOORS & WINDOWS

8.1. THRESHOLDS: CONTRACTOR TO SET DOOR THRESHOLDS IN A FULL BED OF SEALANT.

8.2. DOOR LOCATION DIMENSIONS: ALL DOORS SHALL BE LOCATED 6" FROM THE FACE OF THE WALL IN METAL STUD/GYPSUM BOARD WALLS, 8" FROM THE FACE OF THE WALL IN CMU CONSTRUCTION, OR CENTERED ON THE WALL, UNLESS NOTED OTHERWISE ON THE DRAWINGS.

8.3. EXTERIOR LOUVERS: THE EXTERIOR LOUVERS WILL BE FACTORY PRE-FINISHED TO EXACTLY MATCH THE COLOR OF THE ADJACENT SURFACES. CONTRACTOR SHALL VERIFY THAT ALL LOUVERS PREVENT WATER FROM ENTERING THE BUILDING. A SAMPLE LOUVER COLOR WILL BE APPROVED BEFORE MANUFACTURING.

09 - FINISHES

9.1. PARTITION TYPES: WHERE CHANGES IN PARTITION TYPES COME TOGETHER ALONG A CONTINUOUS WALL, ADJUST THE STUDS TO ALLOW THE OUTERMOST FACES OF FINISH TO BE FLUSH. PARTITION TYPE TRANSITIONS SHALL BE IMPERCEPTIBLE.

9.2. CEMENTITIOUS BACKER BOARD: CEMENTITIOUS BACKER BOARD IS REQUIRED BEHIND ALL CERAMIC WALL TILE LOCATIONS.

9.3. FLOOR TRANSITIONS: AT ALL FLOORING PRODUCT TRANSITIONS, PROVIDE NECESSARY ADA COMPLIANT TRANSITION MATERIALS.

9.4. FLOOR PREP: ALL FLOORS TO BE PROPERLY PREPPED AND FLOATED AS REQUIRED AND BASED ON EXISTING OR NEW SLAB CONIDTIONS.

9.5. FLOOR PATTERNS: CONTRACTOR TO LAYOUT ALL PATTERN FLOOR AREAS AND DRY INSTALL A PORTION OF DESIGN FOR ARCHITECT'S APPROVAL BEFORE INSTALLING FLOOR.

9.6. TILE WORK: ALL FLOOR AND WALL TILE INSTALLATIONS SHALL COMPLY WITH THE STANDARDS AND RECOMMENDED PRACTICES OF THE TCA HANDBOOK FOR CERAMIC TILE INSTALLATION BY THE TILE COUNCIL OF NORTH AMERICA, INC.

9.7. STAIR FINISHES: CONTRACTOR TO VERIFY STAIR FINISH ON FINISH FLOOR PLANS, STAIR PLANS AND DETAILS, AND FINISH SCHEDULE OF ROOM THAT STAIR IS LOCATED BEFORE POURING CONCRETE TREAD. IF NO FINISH IS SHOWN OR CALLED FOR ON STAIR, THEN CONTRACTOR TO PROVIDE FINISH FOR TREADS AND LANDINGS THE SAME AS FINISH SPECIFIED IN ROOM STAIR IS LOCATED ON THE FINISH SCHEDULE. ALL EXPOSED PORTIONS OF STEEL PAN STAIRS SHALL BE PAINTED WHERE NO OTHER FINISH IS SHOWN.

9.8. CEILING GRIDS: ALL SUSPENDED CEILING GRIDS SHALL BE APPROVED BY THE ARCHITECT FOR EXACT LAYOUT BEFORE INSTALLATION. IF THE GRID IS INSTALLED WITHOUT APPROVAL, THEN THE GRID SHALL BE REMOVED AND REINSTALLED BY THE CONTRACTOR AT NO ADDITIONAL COST TO THE OWNER.

9.9. PAINT: ALL SURFACES IN THE PROJECT THAT ARE NOT PRE-FINISHED PAINTABLE IN NATURE ARE TO BE PAINTED. NOTHING SHALL BE LEFT UNPAINTED. SEE SPECIFICATIONS FOR TYPES OF PAINT TO BE USED. CONTRACTOR SHALL PUT UP AN 8'X8' SAMPLE AREA OF ALL PAINT COLORS FOR APPROVAL BEFORE ORDERING PAINT.

9.10. GRILLES: ALL GRILLES THAT ARE EXPOSED ARE TO BE THE MATCHING COLOR OF ADJACENT SURFACES UNLESS OTHERWISE NOTED. EXACT PLACEMENT OF GRILLE LOCATIONS IN THE WALLS ARE TO BE APPROVED BY THE ARCHITECT BEFORE INSTALLATION. IF GRILLES ARE INSTALLED WITHOUT APPROVAL, THEY WILL BE RELOCATED AND THE WALL PATCHED BY THE CONTRACTOR AT NO ADDITIONAL COST TO THE OWNER.

9.11. FURR-DOWN PAINT: UNLESS NOTED OR SPECIFIED OTHERWISE, ALL WALL SURFACES AT FURR DOWNS SHALL RECEIVE PAINTED FINISH TO MATCH ADJACENT WALL COLORS. VERIFY ALL FURR DOWNS WITH ARCHITECT BEFORE PROCEEDING.

9.12. CMU FINISH: ALL CMU BLOCK TO RECEIVE DRYLOK COATING AS SPECIFIED.

9.13. ACOUSTICAL BATT: INSULATE ALL INTERIOR WALLS WITH A MINIMUM OF 3-1/2" UN-FACED FIBERGLASS ACOUSTICAL BATT INSULATION FOR ACOUSTIC CONTROL.

10 - SPECIALTIES

10.1. RECESSED EQUIPMENT: VERIFY THAT ALL RECESSED EQUIPMENT SPECIFIED INCLUDING BUT NOT LIMITED TO FIRE EXTINGUISHER CABINETS, PAPER TOWEL DISPENSERS, ETC., WILL BE CONCEALED IN WALLS. ADJUST WALL THICKNESS AS REQUIRED FOR RECESSED EQUIPMENT.

10.2. BLOCKING FOR EQUIPMENT: PROVIDE BLOCKING AND SOLID GROUNDS FOR ALL EQUIPMENT AND ACCESSORIES INCLUDING BUT NOT LIMITED TO PLUMBING AND LIGHTING FIXTURES, TOILET PARTITIONS, BATHROOM ACCESSORIES, WALL-MOUNTED DOOR STOPS, HARDWARE, SHELVING, CABINETS, APPLIANCES, ETC. ALL WOOD BLOCKING IN METAL STUD PARTITIONS SHALL BE FIRE RETARDANT TREATED.

10.3. EQUIPMENT INSTALLATION: VERIFY ALL EQUIPMENT INSTALLATION CLEARANCES WITH MANUFACTURER, INCLUDING BUT NOT LIMITED TO APPLIANCES AND EQUIPMENT NOT-IN-CONTRACT BUT SHOWN IN DRAWINGS.

13 - SPECIAL CONSTRUCTION

13.1. METAL BUILDING REQUIREMENTS: ALL ROOF AND WALL EXPOSED FASTENERS TO HAVE WATERPROOF WASHERS SUPPLIED AND APPROVED BY THE METAL BUILDING MANUFACTURER.

GENERAL MEP

MEP.1 EQUIPMENT INSTALLATION: CONTRACTOR SHALL VERIFY ALL EQUIPMENT INSTALLATION CLEARANCES AND POWER REQUIREMENTS WITH MANUFACTURER AND COORDINATE ALL SUBCONTRACTORS TO KEEP THE SYSTEMS AS CLOSE TO THE UNDERSIDE OF FLOOR DECK AS POSSIBLE.

MEP.2 FURR-DOWNS / FURR-OUTS: UNLESS OTHERWISE NOTED, THE CONTRACTOR SHALL NOT FURR-OUT OR FURR-DOWN FOR ANY REASON. THE CONTRACTOR SHALL NOTIFY THE ARCHITECT IMMEDIATELY IF IS SUSPECTED THAT A PIPE, DUCT, CONDUIT, OR ANY OTHER MECHANICAL, ELECTRICAL OR PLUMBING DEVICE WILL NOT REMAIN CONCEALED UNDER A FLUSH CONDITION. RE; REFLECTED CEILING PLANS FOR THE LAYOUT OF APPROVED FURR-DOWNS.

MEP.3 DEVICE CONTROLLER LOCATIONS: THE COLORS AND PLACEMENT OF ALL VISIBLE DEVICE CONTROLLERS FOR MECHANICAL, ELECTRICAL, A/V, COMMUNICATIONS, AND OTHER RELATED EQUIPMENT SHALL BE COORDINATED AND APPROVED BY THE ARCHITECT PRIOR TO INSTALLATION TO ENSURE A COHESIVE AND ORGANIZED RESULT. ALL DEVICE CONTROLLERS SHALL MATCH IN MOUNTING HEIGHT ABOVE FINISHED FLOOR AND IN COLOR.

MEP.4 EXPOSED MECHANICAL/ELECTRICAL FIXTURE MOUNTING HEIGHTS: REFER TO ARCHITECTURAL REFLECTED CEILING PLANS AND INTERIOR ELEVATIONS FOR MOUNTING LOCATIONS AND HEIGHTS OF ALL LIGHT FIXTURES AND CEILING FANS AND MECHANICAL DUCTS, DIFFUSERS, ETC. IF MOUNTING HEIGHTS ARE NOT SHOWN, OR DIFFER FROM THE ENGINEERING DRAWINGS, CONSULT THE ARCHITECT.

MEP.5 SPRINKLER SYSTEM SHOP DRAWINGS: THE CONTRACTOR MUST SUBMIT A SPRINKLER SYSTEM LAYOUT WITH THE SPRINKLER SYSTEM SUBMITTAL FOR REVIEW BY THE ARCHITECT. THIS LAYOUT DRAWING MUST BE TO A MIN. OF 1/8=1' SCALE. THE DRAWING MUST INCLUDE CEILING MATERIALS, LIGHT FIXTURES, HVAC DIFFUSERS AND RETURNS, SMOKE DETECTORS, ETC.

MEP.6 SPRINKLER SYSTEM: THE BUILDING FIRE PROTECTION SPRINKLER SYSTEM IS TO BE INSTALLED ABOVE CEILINGS UNLESS NOTED OTHERWISE ON RCP'S. SPRINKLER HEADS SHALL BE CENTERED IN CEILING TILES OR GYPSUM BOARD CEILINGS. WHERE HEADS ARE NOT CENTERED OR OUT OF ALIGNMENT, THEY SHALL BE REINSTALLED AND ALL SURROUNDING FINISHES REPAIRED WHERE FORMER HOLE WAS LOCATED. FIRE SPRINKLER SUBCONTRACTOR SHALL BE PREPARED TO MODIFICATIONS TO THREADED PIPE IN THE FIELD AS REQUIRED TO ENSURE PROPER LOCATION OF HEADS. (WHERE CEILINGS ARE NOT IN CONTRACT (IE, SHELLED SPACES), THE FUTURE CEILING HEIGHTS ARE SHOWN ON THE RCP'S. NOTE THAT IN SUCH CASE, CONTRACTOR MUST TAKE INTO ACCOUNT OTHER SYSTEMS TO BE INSTALLED IN FUTURE SPACE AND COORDINATE PLACEMENT OF FIRE SPRINKLER ACCORDINGLY).

MEP.7 FLOOR DRAINS: WHERE FLOOR DRAINS ARE PRESENT, FLOORS SHALL SLOPE AT A MINIMUM OF 1/8" PER FOOT TO THE DRAIN AND DRAINS SHALL BE LOCATED AT THE LOWEST POINT OF THE AREA WHICH THE DRAIN SERVES.

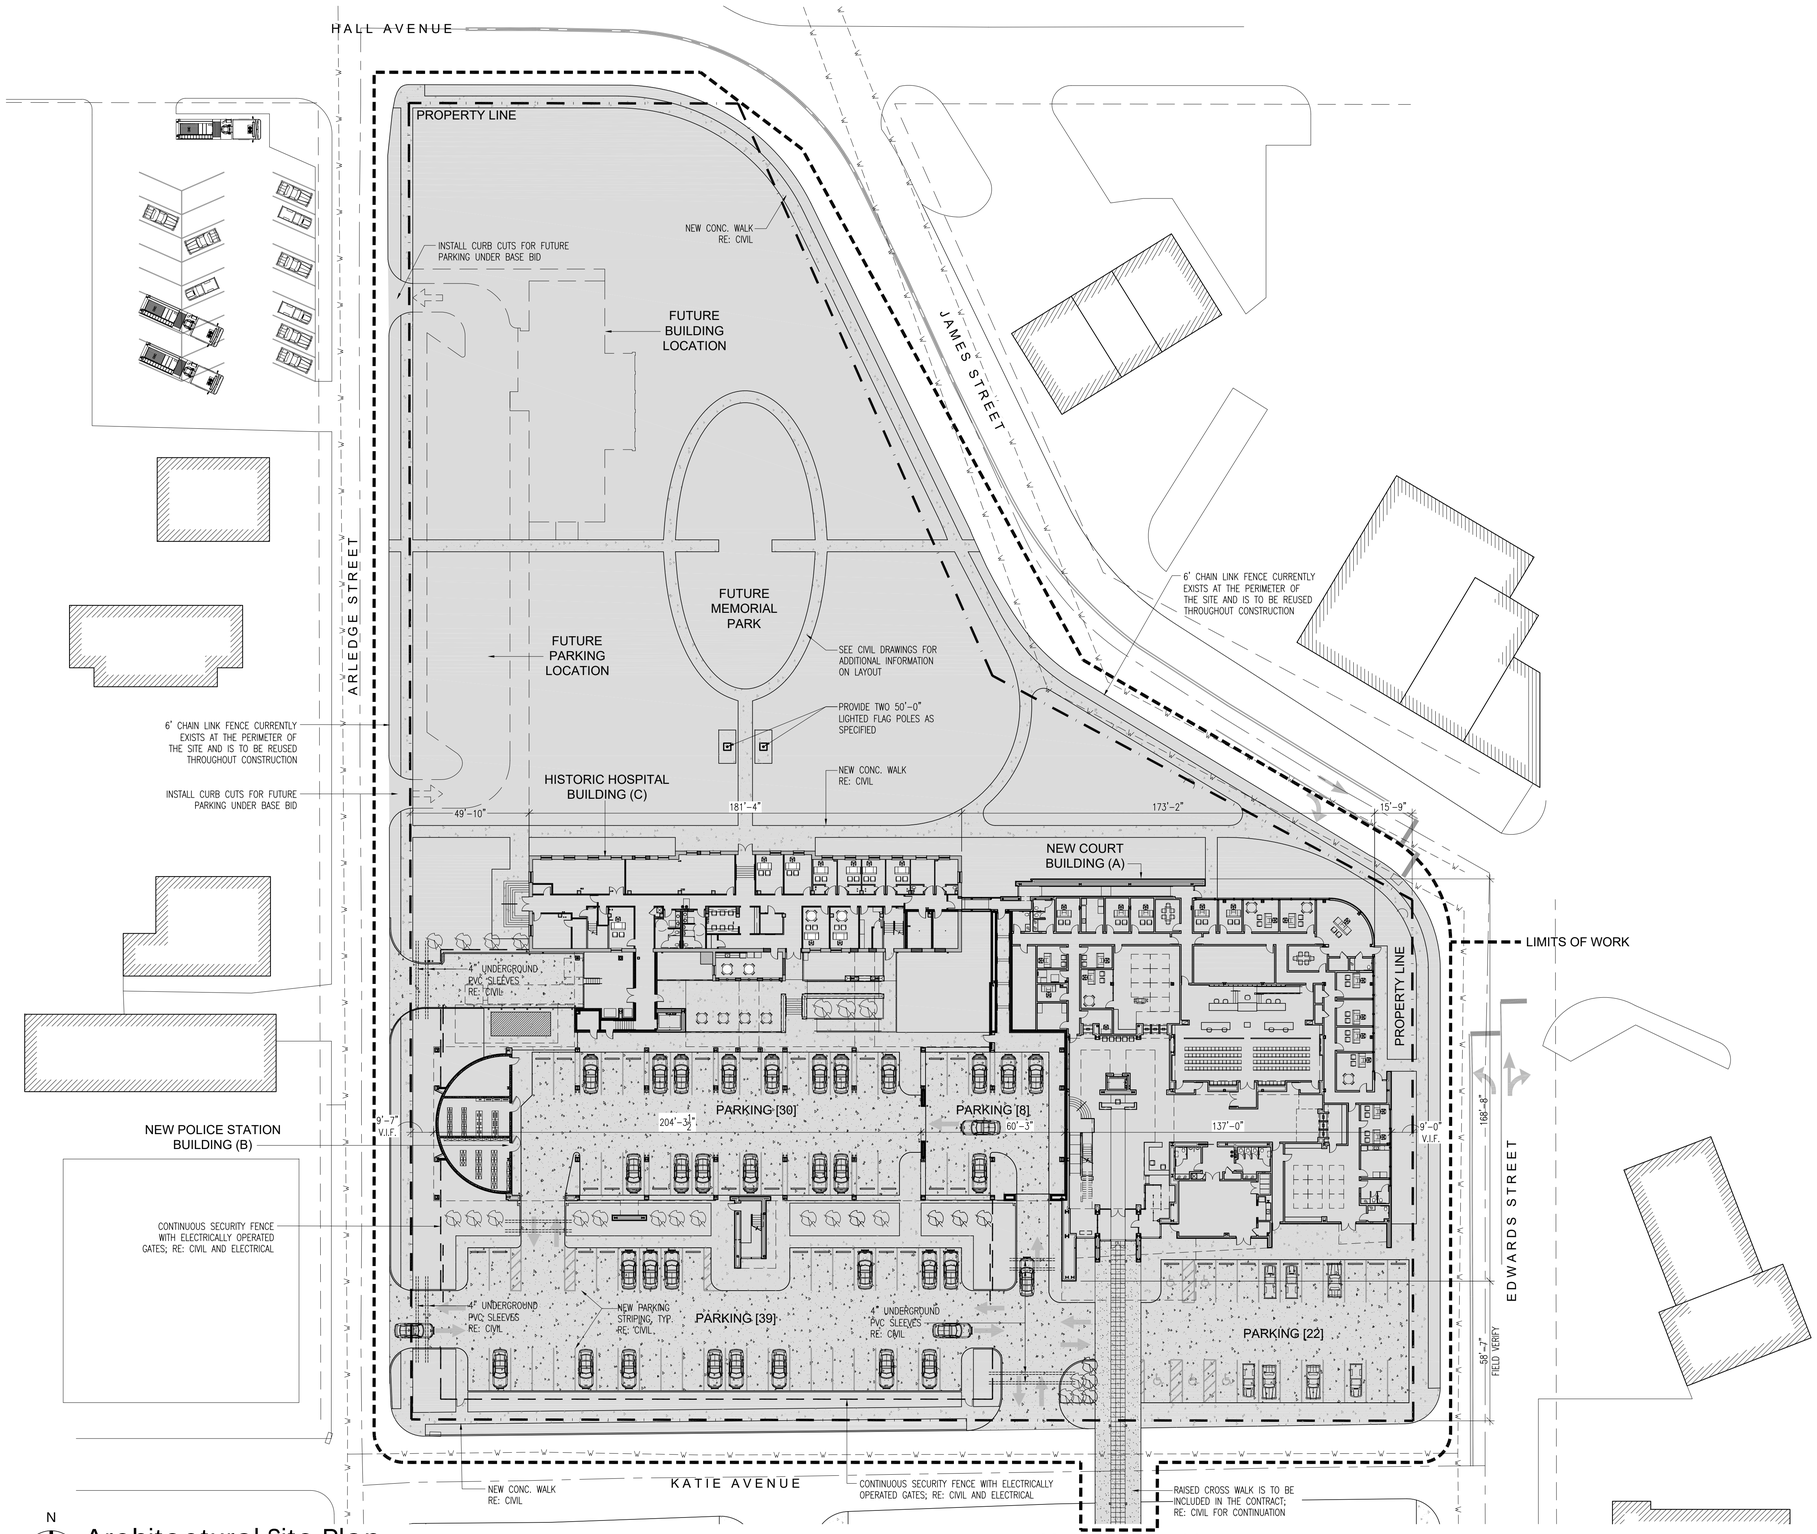
MEP.8 LIGHT FIXTURES: STEM LENGTH OF ALL PENDANT LIGHT FIXTURES SHALL BE APPROVED BY THE ARCHITECT. CONTRACTOR SHALL INSTALL A SAMPLE FIXTURE FOR APPROVAL, MAKING ADJUSTMENTS TO THE LENGTH AS REQUIRED.

31 - EARTHWORK

31.1. SITE TRENCHING: FOR ALL TRENCHING WORK, CONTRACTOR SHALL REPLACE ALL DISTRIBUTED GROUND WITH NEW FILL AND SOD; REPLACE ALL CUT, BROKEN, REMOVED, DISTURBED ASPHALT PAVING, CONCRETE CURBS AND CONCRETE SIDEWALKS WITH NEW IN-KIND MATERIALS TO MATCH ORIGINAL DESIGN. USE APPROVED BACKFILL UNDER ALL ITEMS AS SPECIFIED. CUT ALL SIDEWALKS AT EXISTING CONTROL JOINTS ONLY. IF EXISTING UTILITIES, ARE ENCOUNTERED, PATCH ANY DISTURBED LINES.

31.2. TEMPORARY SHORING. PROVIDE SHORING AS NEEDED FOR EXCAVATION FOOTINGS, MECHANICAL & ELECTRICAL WORK AS DIRECTED BY THE CIVIL, STRUCTURAL DRAWINGS, AND REQUIRED BY CODE AND OSHA REQUIREMENTS.

31.3. SILT AND SOIL EROSION CONTROL: THE CONTRACTOR MUST CONTROL EROSION FROM SITE DURING CONSTRUCTION OF THE PROJECT AS REQUIRED IN THE SPECIFICATIONS.



32 - EXTERIOR IMPROVEMENTS

32.1. CONCRETE PAVEMENT SLOPES: SLOPE ALL CONCRETE PARKING LOT PAVEMENT A MIN. OF 1% IN DIRECTION OF WATER RUN-OFF AND SLOPE ALL CONCRETE PORCHES, SLABS, & SIDEWALKS AWAY FROM BUILDING 1/4" PER FOOT TO INSURE POSITIVE DRAINAGE. CONTRACTOR IS RESPONSIBLE FOR MAINTAINING POSITIVE RUN-OFF AWAY FROM THE BUILDING AND THE ELIMINATION OF STANDING WATER ON THE PARKING LOT AND SITE. ANY CONCRETE, PAVED, OR FINISHED PAVER SURFACES THAT POND WATER SHALL BE REMOVED AND TOTALLY REWORKED TO PROVIDE A NON-PONDING FINISHED RESULT.

32.2. FINISH GRADING: SEE CIVIL DRAWINGS FOR ALL FINISH GRADES AROUND THE BUILDING. FINISH GRADES SHALL NEVER BE ABOVE THE FINISH FLOOR ELEVATION (FFE) AND SHALL SLOPE AWAY FROM BUILDING ON ALL SIDES. THE FINISH GRADE SHALL BE A MINIMUM OF 1/2" BELOW THE FFE AT ALL DOORS. ALL DOOR THRESHOLDS SHALL MEET THE ADA.

32.3. TERMITE PROTECTION: PROVIDE TERMITE TREATMENT, WITH CERTIFICATE TO OWNER; SEE SPECS. PROVIDE A FIVE-YEAR WARRANTY.

32.4. SLEEVES FOR FUTURE. THE GENERAL CONTRACTOR SHALL PRO

ARCHITECTURAL SITE PLAN

2012 INTERNATIONAL BUILDING CODE

OCCUPANCY: Mixed Occupancy - Assembly (A-3), Business (B), Institutional (I-3, CONDITION 5), Storage (S-1,S-2)

Construction type selected to meet the requirements of each of the included occupancies based on separated and non-separated occupancy requirements. Egress designed for most restrictive separated occupancy found within a given story. At first floor, A-3 and S-2 are greater than 10% of total floor area, and I-3 and S-1 are less than 10% of total floor area. At second floor, S-1 is greater than 10% of total floor area. At third floor, S-1 is less than 10% of total floor area.

PHYSICAL PROPERTIES

BUILDING (A) AND (B) (NEW CONSTRUCTION)
Area (Conditioned):
- First Floor: 22,000 SF
- Second Floor: 24,200 SF
- Third Floor: 21,000 SF
- Total: 67,200 SF (Conditioned)

Area (Unconditioned):
- Parking Garage: 18,000 SF
- Mech. Penthouse: 4,200 SF
- Total: 22,200 SF
- Total Building: 89,400 SF

Grade Elevation: 156'
Floor Elevation: 156.25'
Building Height: 59'
Building Stories: 3
Separation: >30 FT at all sides - unlimited openings
Type of Construction: Type II-B (T601) (Non-combustible Materials - Sprinkled).

BUILDING (C) (EXISTING CONSTRUCTION)
Area:
- First floor: 7,800 SF
- Second floor: 7,800 SF
- Third floor: 7,800 SF
- Elevator Penthouse: 580 SF
- Total area: 23,980 SF

Grade Elevation: 156'
Floor Elevation: 161.25'
Building Height: 49'
Building Stories: 3
Separation: >30 FT at all sides - unlimited openings
Type of Construction: Type II-B (T601) (Non-combustible Materials - Sprinkled).

TOTAL AREA OF COMBINED BUILDINGS:
- First Floor: 47,800 GSF
- Second Floor: 32,000 GSF
- Third Floor: 28,800 GSF
- Penthouses: 4,780 GSF
- Total Project: 113,380 GSF

AREA & HEIGHT LIMITATIONS:

BUSINESS (B)
Max Height - 55 FT / Max # of Stories - 3 / Max Building Area - 23,000 SF/FLOOR (T503)
BUILDING HEIGHT MODIFICATIONS (504.2)
With sprinkler, max building height increased by 20 FT and max number of stories increased by 1.
AREA MODIFICATIONS (506.1)
Frontage: Area increase due to frontage is 75% (506.2)
$I_f = [F/P - 0.25]W/30$
$I_f = [1,171/1,171 - 0.25]30/30$
$I_f = .75$
Sprinkler: Area increase due to sprinkler is 200% (506.3)
$I_s = 2$
Allowable Building Area Per Floor:
$A_a = \{A_t + [A_t \times I_f] + [A_t \times I_s]\}$
$A_a = \{23,000 + [23,000 \times .75] + [23,000 \times 2]$
$A_a = 86,250$
ADJUSTED MAX HEIGHT: 75 FT
ADJUSTED MAX # OF STORIES: 4 STORIES
ADJUSTED MAX BUILDING AREA: 86,250 SF/FLOOR

ASSEMBLY (A-3)
Max Height - 55 FT / Max # of Stories - 2 / Max Building Area - 9,500 SF/FLOOR (T503)
BUILDING HEIGHT MODIFICATIONS (504.2)
With sprinkler, max building height increased by 20 FT and max number of stories increased by 1.
AREA MODIFICATIONS (506.1)
Frontage: Area increase due to frontage is 75% (506.2)
$I_f = [F/P - 0.25]W/30$
$I_f = [1,171/1,171 - 0.25]30/30$
$I_f = .75$
Sprinkler: Area increase due to sprinkler is 200% (506.3)
$I_s = 2$
Allowable Building Area Per Floor:
$A_a = \{A_t + [A_t \times I_f] + [A_t \times I_s]\}$
$A_a = \{9,500 + [9,500 \times .75] + [9,500 \times 2]$
$A_a = 35,625$
ADJUSTED MAX HEIGHT: 75 FT
ADJUSTED MAX # OF STORIES: 3 STORIES
ADJUSTED MAX BUILDING AREA: 35,625 SF/FLOOR

STORAGE (S-1)
Max Height - 55 FT / Max # of Stories - 2 / Max Building Area - 17,500 SF/FLOOR (T503)
BUILDING HEIGHT MODIFICATIONS (504.2)
With sprinkler, max building height increased by 20 FT and max number of stories increased by 1.
AREA MODIFICATIONS (506.1)
Frontage: Area increase due to frontage is 75% (506.2)
$I_f = [F/P - 0.25]W/30$
$I_f = [1,171/1,171 - 0.25]30/30$
$I_f = .75$
Sprinkler: Area increase due to sprinkler is 200% (506.3)
$I_s = 2$
Allowable Building Area Per Floor:
$A_a = \{A_t + [A_t \times I_f] + [A_t \times I_s]\}$
$A_a = \{17,500 + [17,500 \times .75] + [17,500 \times 2]$
$A_a = 65,625$
ADJUSTED MAX HEIGHT: 75 FT
ADJUSTED MAX # OF STORIES: 3 STORIES
ADJUSTED MAX BUILDING AREA: 65,625 SF/FLOOR

STORAGE (S-2)
Max Height - 55 FT / Max # of Stories - 3 / Max Building Area - 26,000 SF/FLOOR (T503)
BUILDING HEIGHT MODIFICATIONS (504.2)
With sprinkler, max building height increased by 20 FT and max number of stories increased by 1.
AREA MODIFICATIONS (506.1)
Frontage: Area increase due to frontage is 75% (506.2)
$I_f = [F/P - 0.25]W/30$
$I_f = [1,171/1,171 - 0.25]30/30$
$I_f = .75$
Sprinkler: Area increase due to sprinkler is 200% (506.3)
$I_s = 2$
Allowable building area Per Floor:
$A_a = \{A_t + [A_t \times I_f] + [A_t \times I_s]\}$
$A_a = \{26,000 + [26,000 \times .75] + [26,000 \times 2]$
$A_a = 97,500$
ADJUSTED MAX HEIGHT: 75 FT
ADJUSTED MAX # OF STORIES: 4 STORIES
ADJUSTED MAX BUILDING AREA: 97,500 SF/FLOOR

ALLOWABLE BUILDING AREA FOR SEPARATED OCCUPANCIES (508.4.2):
First Story: 3,883/35,625 (A-3) + 16,202/86,250 (B) + 16,220/97,500 (S-2) = 0.48
I-3 and S-1 are each less than 10% of aggregate floor area of story and therefore are accessory occupancies.
Second Story: S-1 is greater than 10% of story. No separation required between Group B and Group S-1. Area and Height limitations are based on most restrictive group (S-1).
Third Story: S-1 is less than 10% of aggregate floor area of story and therefore is an accessory occupancy.

SPECIAL DETAILED REQUIREMENTS BASED ON USE AND OCCUPANCY

ATRIUMS: The atrium floor area is permitted to be used for any approved use with an automatic sprinkler system (404.2, Exception). Automatic sprinkler system required throughout the entire building (404.3). Fire alarm system required (404.4). Smoke control system required (404.5). 1-hour fire barrier is provided at atrium enclosures (404.6), or a glass wall forming a smoke partition is provided as follows: automatic sprinklers provided along both sides of the separation wall and doors, sprinkler heads are located between 4" and 12" away from the glass and at maximum intervals of 6 feet, the sprinkler system wets the entire surface of the glass upon activation, the framing system is gasketed to allow deflection of the glass without breaking before the sprinkler system activates, and doors close automatically (404.6, Exception). A fire barrier is not required between the atrium and the adjoining spaces of any three floors of the atrium provided such spaces are accounted for in the design of the smoke control system. The interior finish of walls and ceilings of the atrium shall be not less than Class B (404.8). Other than the lowest level of the atrium, where the required means of egress is through the atrium space, the portion of exit access travel distance within the atrium space shall be not greater than 200 feet (404.9).

STAGES: Permanent platforms shall be constructed of materials as required for the type of construction of the building in which the permanent platform is located (410.4).

GROUP I-3: Exits are permitted to discharge into a fenced or walled courtyard; enclosed yards or courts shall be of a size to accommodate all occupants, be located not less than 50 feet from the building and have an area of not less than 15 square feet per person (408.3.6). A sallyport shall be permitted in a means of egress where there are provisions for continuous and unobstructed passage through the sallyport during an emergency egress condition (408.3.7). Doors from a refuge area to the outside are permitted to be locked with a key; the keys to unlock the exterior doors shall be available at all times and the locks shall be operable from both sides of the door (408.4). Remote release of locks on doors in a means of egress shall be provided with reliable means of operation to release locks on all required doors (408.4.1). Power-operated doors or locks shall be operable by a manual release mechanism at the door, and either emergency power or a remote mechanical operating release shall be provided (408.4.2). Remote release doors or locks shall be provided with a mechanically operated release mechanism at each door, or shall be provided with a redundant remote release control (408.4.3). Doors remotely unlocked under emergency conditions shall not automatically relock when closed unless specific action is taken at the remote location to enable doors to relock (408.4.4). Security glazing permitted where the following conditions are met: Individual panels of glazing shall not exceed 1,296 square inches, the glazing shall be protected on both sides by an automatic sprinkler system, the framing system is gasketed to allow deflection of the glass without breaking before the sprinkler system activates, obstructions shall not be installed between the automatic sprinklers and the glazing (408.7). For the purposes of this section, a windowless building or portion of a building is one with non-openable windows, windows not readily breakable, or without windows; windowless buildings shall be provided with an engineered smoke control system to provide a tenable environment for exiting from the smoke compartment in the area of fire origin (408.9). A fire alarm system shall be provided (408.10). Group I-3 occupancies shall be equipped throughout with a sprinkler system (408.11).

GENERAL BUILDING HEIGHTS AND AREAS

BUILDINGS ON THE SAME LOT: Buildings are considered to be portions of one building as the building height of each building and the aggregate building area of the buildings are within the limitations (503.1.2).

MIXED USE AND OCCUPANCY: Each portion of a building shall be individually classified in accordance with Section 302.1. Where a building contains more than one occupancy group, the building or portion thereof shall comply with Section 508.2 (Accessory Occupancies), 508.3 (Nonseparated Occupancies), 508.4 (Separated Occupancies), or a combination of these sections (508.1).

ACCESSORY OCCUPANCIES: Accessory occupancies are ancillary to the main occupancy of the building or portion thereof (508.2). 10% of the building area of story max (508.2.1). Shall be individually classified in accordance with Section 302.1 (508.1.2). No separation is required between accessory occupancies and the main occupancy (508.2.4).

NONSEPARATED OCCUPANCIES: Nonseparated occupancies shall be individually classified in accordance with Section 302.1. The requirements of this code shall apply to each portion of the building based on the occupancy classification of that space. In addition, the most restrictive provisions of Chapter 9 which apply to the nonseparated occupancies shall apply to the total nonseparated occupancy area (508.3.1). The allowable building area and height of the building or portion thereof shall be based on the most restrictive allowances for the occupancy groups under consideration for the type of construction of the building in accordance with Section 503.1 (508.3.2). No separation is required between nonseparated occupancies (508.3.3).

SEPARATED OCCUPANCIES: Separated occupancies shall be individually classified in accordance with Section 302.1. Each separated space shall comply with this code based on the occupancy classification of that portion of the building (508.4.1). In each story, the building area shall be such that the sum of the ratios of the actual building area of each separated occupancy divided by the allowable building area of each separated occupancy shall not exceed 1 (508.4.2). Each separated occupancy shall comply with the building height limitations based on the type of construction of the building in accordance with Section 503.1 (508.4.3).

REQUIRED SEPARATION OF OCCUPANCIES (T508.4)
- Group A to Group B - 1 Hour with sprinkler
- Group A to Group S-2 - No separation required
- Group I-3 to Group B - 1 Hour with sprinkler
- Group S-1 to Group B - No separation required
- Group S-2 to Group B - 1 Hour with sprinkler
- Group S-2 to Group S-1 - 1 Hour with sprinkler

INCIDENTAL OCCUPANCIES: Incidental uses are ancillary functions associated with a given occupancy that generally pose a greater level of risk to that occupancy and are limited to those uses listed in Table 509 (509.1). Incidental uses shall not be individually classified in accordance with Section 302.1, and shall be included in the building occupancies within which they are located (509.2). Incidental uses shall not occupy more than 10 percent of the building area of the story in which they are located (509.3). The incidental uses listed in Table 509 shall be separated from the remainder of the building or equipped with an automatic sprinkler system, or both, in accordance with the provisions of that table (509.4).

OPEN PARKING GARAGE BENEATH GROUP B: Open parking garages constructed under Groups B shall not exceed the height and area limitations permitted under Section 406.5. The height and area of the portion of the building above the open parking garage shall not exceed the limitations in Section 503 for the upper occupancy. The height, in both feet and stories, of the portion of the building above the open parking garage shall be measured from grade plane and shall include both the open parking garage and the portion of the building above the parking garage (510.7). 1-hour fire barriers and horizontal assemblies required between the parking occupancy and adjacent/upper Group B and Group S-1 occupancies per Table 508.4. Means of egress for the upper occupancy shall conform to Chapter 10 and shall be separated from the parking occupancy by fire barriers or horizontal assemblies having not less than a 2-hour fire-resistance rating with self-closing doors (510.7.1).

OPEN PARKING GARAGES: Open parking garages shall be of Type I, II or IV construction. Open parking garages shall meet the design requirements of Chapter 16 (406.5.1). For natural ventilation purposes, the exterior side of the structure shall have uniformly distributed openings on two or more sides. The area of such openings in exterior walls on a tier shall be not less than 20 percent of the total perimeter wall area of each tier. The aggregate length of the openings considered to be providing natural ventilation shall be not less than 40 percent of the perimeter of the tier [Exception: Openings are not required to be distributed over 40 percent of the building perimeter where the required openings are uniformly distributed over two opposing sides of the building] (406.5.2). Area and height of open parking garages shall be limited as set forth in Chapter 5 for Group S-2 occupancies and as further provided for in Section 508.1 (406.5.4).

TYPE OF CONSTRUCTION

TYPE II. Type II construction is that type of construction in which the building elements listed in Table 601 are of noncombustible materials. (602.2)

FIRE RESISTANCE RATING REQUIREMENTS FOR TYPE II-B (T601)
- Primary Structural Frame: 0-hour
- Exterior Bearing Walls: 0-hour
- Interior Bearing Walls: 0-hour
- Non-bearing Exterior Partitions: 0-hour (T602 - separation greater than 30 ft)
- Non-bearing Interior Partitions: 0-hour (Not less than fire-resistance rating required by other sections of this code)
- Floor Construction: 0-hour
- Roof Construction: 0-hour

FIRE AND SMOKE PROTECTION FEATURES

SHAFT ENCLOSURES: 2-hour fire-resistance rating where connecting four stories or more; not less than 1-hour fire-resistance rating where less than four stories (713.4). Enclosed elevator lobbies are not required where the building is protected by an automatic sprinkler system (713.14.1, Exception 4).

OPENING PROTECTIVES: Fire Walls and Fire Barriers: 2-hour wall - 90 minute door; 1½-hour wall - 90 minute door; 1-hour wall - 45 minute door. Exit Passage or Exit Shaft: 2-hour wall - 90 minute door; 1-hour wall - 60 minute door (T716.5).

INTERIOR FINISHES

INTERIOR WALL/CEILING FINISHES: Selected for most restrictive group (A-3) - Vertical Exits - B Minimum.; Exit Access - B minimum; Rooms - C minimum (T803.9).

FIRE PROTECTION SYSTEMS

FIRE SPRINKLER SYSTEM: An automatic sprinkler system is required in this building for most restrictive group [A-3] (903.2.1.3). Automatic sprinkler system to be installed in accordance with NFPA 13 (903.3.1.1).

PORTABLE FIRE EXTINGUISHERS: Portable fire extinguishers are to be installed in Groups A, B, I, and S occupancies, within 30 feet of commercial cooking equipment, and in computer and generator rooms (906.1). Portable fire extinguishers selected and installed in accordance with NFPA 10 (906.2). Minimum rated single extinguisher - 2-A; maximum floor area per unit of A - 3,000 SF; maximum floor area for extinguisher - 11,250 SF; maximum travel distance to extinguisher - 75 feet (T906.3(1)).

FIRE ALARM SYSTEM: Fire alarm system is required in this building for most restrictive group [B] (907.2.1).

MEANS OF EGRESS

GENERAL MEANS OF EGRESS: Minimum ceiling height - 7'-6" (1003.2). Provide 27" maximum high barrier where vertical clearance is less than 80" (1003.3.1). Handrails may protrude 4½" into clearance (1003.3.3, Exception). Floor surface shall be slip resistant (1003.4). Any change in elevation less than 12" must be a sloped walking surface/ramp; 6" or less must have either contrasting floor finishes or handrails (1003.5). Path of egress travel must be continuous (1003.6).

OCCUPANT LOADS: Posting of occupant load required for every room that is an assembly occupancy (1004.3). Where multiple occupancies, egress components shall meet the more stringent requirements of all occupancies that are served (1004.6).

MAXIMUM FLOOR AREA ALLOWANCES PER OCCUPANT (T1004.1.2)
- Accessory Storage/Mechanical: 300 gross
- Assembly - Standing: 5 net
- Assembly - Chairs: 7 net
- Assembly - Chairs and Tables: 15 net
- Business: 100 gross
- Courtrooms: 40 net
- Dormitories: 50 gross
- Classroom Area: 20 net
- Exercise Room: 50 gross
- Commercial Kitchens: 200 gross
- Parking Garages: 200 gross
- Stages/Platforms: 15 net

MEANS OF EGRESS SIZING: .2"/person for stairs (1005.3.1, Exception). .15"/person for other egress components (1005.3.2, Exception). Door encroachment is to be max of 7" when fully opened (1005.7.1).

ACCESSIBLE MEANS OF EGRESS: Two accessible means of egress required (1007.1 & 1015). 48" clear between handrails at stairways not required with automatic sprinkler system (1007.3, Exception #1). Areas of refuge not required with automatic sprinkler system (1007.3, Exception #2). Elevators complying with Section 2.27 of ASME A17.1 and having standby power in accordance with Chapter 27 and Section 3003 allowed to be part of an accessible means of egress (1007.4).

DOORS: Means of egress doors must provide clear opening of 32" (1008.1.1). Doors swing in the direction of egress travel for rooms having 50 or more occupants (1008.1.2). In Group I-3, means of egress doors for spaces occupied by persons whose movements are controlled for security reasons shall be permitted to be locked when equipped with egress control devices which shall unlock manually and by either activation of an automatic sprinkler system, activation of an manual alarm box, or a signal from a constantly attended location (1008.1.9.10).

STAIRWAYS: Exit access stairways within an atrium are not required to be enclosed (1009.3, Exception #5). Minimum stairway width is 44" (1009.4). Minimum head room is 80" (1009.5). Maximum riser height is 7"; minimum tread depth is 11" (1009.7.2). Stair treads and risers shall be of uniform size and shape (1009.7.4). No water accumulation on outdoor egress stairways (1009.9.2). A flight of stairs shall not have a vertical rise greater than 12 feet between floors/landings (1009.10). Stairs shall have handrails on each side (1009.15). Stairway shall extend to the roof surface with four or more stories (1009.16).

RAMPS: Maximum vertical rise for any ramp is 30" (1010.5). Minimum width between handrails is 36" (1010.6.1). Minimum head room is 80" (1010.6.2). Landing width shall be equal to ramp width minimum (1010.7.2). Landing length is 5 feet minimum (1010.7.3). 60"x60" minimum at change in direction (1010.7.4). Handrails required on each side if rise is greater than 6" (1010.9). A curb, rail, wall, or barrier shall be provided as edge protection (1010.10.1). Guards provided by Section 1013 (1010.11).

HANDRAILS: Handrail height is 34-38 inches (1012.2). Handrail diameter is 1 ¼" minimum and 2" maximum (1012.3.1). Handrail gripping surface to be continuous (1012.4). Handrail to extend 12" beyond top riser and continue for one tread depth beyond bottom riser; handrails to extend minimum of 12" beyond top and bottom of ramp runs (1012.6).

GUARDS: Required at open-sided walking surfaces 30" or greater above the floor or grade below at any point within 36" of edge (1013.2). 42" minimum in height (1013.3). Openings shall not allow the passage of a 4" diameter sphere (1013.4); 4 ⅜" between 36" and 42" (1013.4, Exception #1); 6" at triangular openings between stair and guardrail (1013.4, Exception #2).

EXIT ACCESS: Egress not allowed through intervening rooms unless they are accessory to space (1014.2). Common path of travel is 75 feet for Group A; 100 feet for Group B (T1014.3).

EXIT ACCESS DOORWAYS: One exit allowed from rooms or 49 occupants or less (T1015.1). Diagonal rule for exit location is reduced to 1/3 from 1/2 because of sprinkler system where two exits are required (1015.2.1, Exception #2).

EXIT ACCESS TRAVEL: Maximum exit access travel distance is 250 feet for Group A with sprinkler; 300 feet for Group B (T1016.2).

CORRIDORS: 0-hour corridor fire rating required (T1018.1). Minimum corridor width is 44" (T1018.2). Max dead end corridor length is 20 feet in Group A; 50 feet in Group B with sprinkler; length shall not be limited where length is less than 2.5 times the width (1018.4). Foyers, lobbies, and reception rooms may intervene in corridor exit access (1018.6).

NUMBER OF EXITS AND EXIT CONFIGURATION: Minimum number of exits: 50-500 = 2; 501-1000 = 3; greater than 1000 = 4 (T1021.2 & 1021.2.4).

EGRESS BALCONIES: Egress balconies have same requirements as corridors for width, headroom, projections, dead ends, and min snow/ice coverage (1019). Exterior egress balconies shall be separated from interior with same requirements as corridors (0-hour) (1019.2). 50% openness required (1019.3). Exterior egress balconies shall have 10 feet minimum separation from lot line or adjacent unprotected buildings in accordance with Section 705 (1019.4).

INTERIOR EXIT STAIRWAYS AND RAMPS: Shall lead directly to the exterior of the building or extend to the exterior of the building with an exit passageway; shall not be used for any purpose other than a means of egress (1022.1). Shall be constructed as fire barriers or horizontal assemblies: 1-hour where connecting less than four stories; 2-hours where connecting four stories or more (1022.2). Shall terminate at an exit discharge or public way (1022.3). Penetrations prohibited except for required exit doors, equipment, and ductwork (1022.5). Where non-rated walls enclose the exterior of the stairway and the walls are exposed by other parts of the building at an angle of less than 180 degrees, the exterior walls within 10 feet of a non-rated wall shall have a fire-resistance rating of not less than one hour (1022.7).

EXIT PASSAGEWAYS: Width shall not be less than 44" (1023.2). Walls, floors, and ceilings shall not have less than 1-hour fire-resistance rating, and not less than that required for any connecting interior exit stairway or ramp (1023.3). Shall terminate at exit discharge on the level of exit discharge; shall terminate at an exit on other levels (1023.4).

REQUIREMENTS FOR EXTERIOR EXIT RAMPS AND STAIRS: Building must be less than 6 stories and not a high-rise (1026.2). Element must have an open side (1026.3). Open areas adjoining exterior exit stairways or ramps shall be yards, courts, or public ways (1026.4). 10 feet minimum separation from lot line or adjacent unprotected buildings (1026.5). Shall be separated from the interior of the building as required by Section 1022.2 (1026.6).

EXIT DISCHARGE: Exits shall discharge directly to the exterior of the building (1027.1). Egress courts are permitted as a portion of the exit discharge in the means of egress (1027.4). Egress court minimum width shall not be less than 44"; height shall unobstructed to a height of 7 feet (1027.4.1). Where width is less than 10 feet, egress court walls shall not have less than 1-hour fire-resistance rating for a distance of 10 feet above the floor of the court (1027.4.2). Exit discharge shall provide direct and unobstructed access to a public way; a safe dispersal area is allowed where the following conditions are met: the area shall be of a size to accommodate at least 5 square feet for each person, the area shall be located on the same lot at least 50 feet away from the building requiring egress, the area shall be permanently maintained and identified as a safe dispersal area, and the area shall be provided with a safe and unobstructed path of travel from the building (1027.5).

ASSEMBLY: 50% of Group A occupants are to exit through the main exit if over 300 occupants (1028.2). Exits and aisles shall be located so that the travel distance to an exit door shall not be greater than 250 feet with sprinkler (1028.7).

ACCESSIBILITY

ACCESSIBLE ROUTE: Accessible routes within the site shall be provided from public transportation stops, accessible parking, accessible passenger loading zones, and public streets or sidewalk to the accessible building entrance served (1104.1). At least one accessible route shall connect accessible buildings, accessible facilities, accessible elements, and accessible spaces that are on the same site (1104.2). At least one accessible route shall connect each accessible level (1104.4). Accessible routes shall coincide with or be located in the same area as a general circulation path (1104.5).

ACCESSIBLE ENTRANCES: Minimum of 60% of all public entrances shall be accessible (1105.1).

PARKING AND PASSENGER LOADING FACILITIES: Where parking is provided, accessible parking spaces shall be provided in compliance with Table 1106.1. Accessible parking spaces shall be located on the shortest accessible route of travel from adjacent parking to an accessible building entrance (1106.6). Passenger loading zones shall be accessible (1106.7).

SIGNAGE: Provide accessible signage in accordance with Section 1110.

INTERIOR ENVIRONMENT

INTERIOR SPACE DIMENSIONS: Habitable spaces shall not be less 7 feet in any dimension (1208.1). Minimum ceiling height shall be 7'-6" (1208.2). Minimum habitable space shall be 70 square feet (1208.3).

TOILET AND BATHROOM REQUIREMENTS: Floors shall have a smooth, hard, nonabsorbent surface with a 4" smooth, hard, nonabsorbent base (1210.2.1). 48" high minimum wainscot of smooth, hard, nonabsorbent surface required in rest rooms within 2 feet of service sinks, urinals, and water closets (1210.2.2). A separate compartment with walls or partitions and a door for each water closet shall be provided (1210.3.1). A separate area with walls or partitions shall be provided for each urinal and shall begin at a height not more than 12 inches from and extend not less than 60 inches above the finished floor surface; partitions shall extend not less than 18" from the wall surface at each side of the urinal (1210.3.2).

ROOFTOP STRUCTURES (PENTHOUSES): Penthouses in compliance with Sections 1509.2.1 through 1509.2.5 shall be considered a portion of the story directly below the roof deck on which such penthouses are located. All other penthouses shall be considered as an additional story of the building (1509.2). Penthouses constructed on buildings of other than Type I construction shall not exceed 18 feet in height above the roof deck as measured to the average height of the roof of the penthouse (1509.2.1). The aggregate area of penthouses and other enclosed rooftop structures shall not exceed one-third the area of the supporting roof deck. Such penthouses and other enclosed rooftop structures shall not be required to be included in determining the building area or number of stories as regulated by Section 503.1. The area of such penthouses shall not be included in determining the fire area specified in Section 901.7.1 (1509.2.2).

ELEVATORS AND CONVEYING SYSTEMS: Elevators connecting four or more stories shall be sized to accommodate a 24"x84" ambulance stretcher (3002.4). Emergency operations for elevators acting as part of an accessible means of egress by Section 3003. Machine room requirements by section 3006. Occupant evacuation elevator requirements by Section 3008.

SPECIAL CONSTRUCTION: Awnings and canopies requirements by Section 3105.

SAFEGUARDS DURING CONSTRUCTION: Provide in accordance with Chapter 33.

CONSTRUCTION TO BE COMPLETED IN ACCORDANCE WITH ALL OTHER STATE AND LOCAL CODES, LAWS, AND REGULATIONS

PLUMBING TOTALS NOTES:
1. WATER CLOSETS/LAVATORIES: DUE TO SECURITY REQUIREMENTS, THE BUILDING HAS BEEN BROKEN DOWN INTO ZONES BASED ON DOOR ACCESS. ACCESS TO ZONES IS PERMISSIBLE TO ONLY CERTAIN EMPLOYEES/PUBLICS, THUS WATER CLOSET AND LAVATORY LOCATIONS HAVE BEEN DESIGNED TO ACCOMMODATE THESE RESTRICTIONS.
2. DRINKING FOUNTAINS: DRINKING FOUNTAIN REQUIREMENTS ARE COMBINED FOR THE ZONES 1, 2, AND 3. ZONE 1 REQUIRES 2 FOUNTAINS. ZONES 2 & 3 HAVE ACCESS TO THESE TWO FOUNTAINS AS WELL AS A BREAK ROOM LOCATED IN EACH ZONE, FULFILLING THE ADDITIONAL DRINKING FOUNTAIN REQUIREMENTS.
3. POLICE SPACES: THROUGHOUT ZONE 4, POLICE EMPLOYEES HAVE ACCESS TO ALL FLOORS OF THE BUILDING, THEREFOR PLUMBING REQUIREMENT COUNTS HAVE BEEN COMBINED FOR THE ZONE. GROUP I–3 REQUIRES SEPARATE PLUMBING FACILITIES FOR INMATES, SO WATER CLOSETS AND LAVATORIES HAVE BEEN PROVIDED TO MEET THIS REQUIREMENT.

Blocking for Equipment

PROVIDE WALL THICKNESS TO FULLY RECESS ANY EQUIPMENT REQUIRED TO BE RECESSED. VERIFY ALL EQUIPMENT DIMENSIONAL REQUIREMENTS AND LOCATIONS WITH ARCHITECT BEFORE CONSTRUCTING PARTITIONS. SOME PARTITIONS CONTAINING RECESSED EQUIPMENT MAY NEED TO BE THICKER THAN SHOWN ON THIS PLAN. THESE WALLS WILL BE VERIFIED BY ARCHITECT BEFORE CONSTRUCTION AND WILL BE PROVIDED AT THE CONTRACTOR'S EXPENSE. PROVIDE SOLID BLOCKING BEHIND ALL FIXED EQUIPMENT AND ACCESSORIES SHOWN IN THE CONTRACT DOCUMENTS. VERIFY THE LOCATION AND SIZE OF ALL FIXED EQUIPMENT AND ACCESSORIES BEFORE INSTALLING BLOCKING.

Fire Rating Note

FIRE RATED CONSTRUCTION REQUIRED BY CODE IS DEMONSTRATED ONLY ON THIS SHEET AS REPRESENTED BY 1-HOUR OR 2-HOUR DASHED LINES ON PLANS. UL-LISTINGS AND FIRE RATINGS LISTED ABOVE ARE INTENDED ONLY WHEN THESE PARTITION TYPES COINCIDE WITH THE DASHED LINES SHOWN ON PLANS ON THIS SHEET.

Fire Blocking & Draft Stopping

FIRE RATED PARTITIONS SHALL BE COMPLETELY SEALED FROM DECK TO DECK USING RATED SEALANTS AND FIRE STOPPING AS REQUIRED. RE: SECTION 716 IN 2012 IBC.

SECOND FLOOR LIFE SAFETY PLAN

Blocking for Equipment

PROVIDE WALL THICKNESS TO FULLY RECESS ANY EQUIPMENT REQUIRED TO BE RECESSED. VERIFY ALL EQUIPMENT DIMENSIONAL REQUIREMENTS AND LOCATIONS WITH ARCHITECT BEFORE CONSTRUCTING PARTITIONS. SOME PARTITIONS CONTAINING RECESSED EQUIPMENT MAY NEED TO BE THICKER THAN SHOWN ON THIS PLAN. THESE WALLS WILL BE VERIFIED BY ARCHITECT BEFORE CONSTRUCTION AND WILL BE PROVIDED AT THE CONTRACTOR'S EXPENSE. PROVIDE SOLID BLOCKING BEHIND ALL FIXED EQUIPMENT AND ACCESSORIES SHOWN IN THE CONTRACT DOCUMENTS. VERIFY THE LOCATION AND SIZE OF ALL FIXED EQUIPMENT AND ACCESSORIES BEFORE INSTALLING BLOCKING.

Fire Rating Note

FIRE RATED CONSTRUCTION REQUIRED BY CODE IS DEMONSTRATED ONLY ON THIS SHEET AS REPRESENTED BY 1-HOUR OR 2-HOUR DASHED LINES ON PLANS. UL-LISTINGS AND FIRE RATINGS LISTED ABOVE ARE INTENDED ONLY WHEN THESE PARTITION TYPES COINCIDE WITH THE DASHED LINES SHOWN ON PLANS ON THIS SHEET.

Fire Blocking & Draft Stopping

FIRE RATED PARTITIONS SHALL BE COMPLETELY SEALED FROM DECK TO DECK USING RATED SEALANTS AND FIRE STOPPING AS REQUIRED. RE: SECTION 716 IN 2012 IBC.

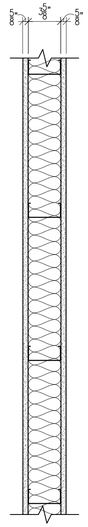
MECH. PENTHOUSE /ROOF LIFE SAFETY PLAN

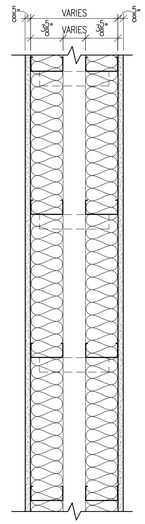
PARTITION TYPES A1 A2



6" METAL STUDS AT 16" O.C. BRACED AT 4'-0" O.C. ABOVE CEILING TO DECK ABOVE. SHEATH WITH (1) LAYER OF 5/8" GYPSUM BOARD ON EACH SIDE FROM FLOOR TO DECK AND SEAL TIGHT; FILL WALL WITH ACOUSTIC BATT INSULATION CONTINUOUS FROM FLOOR TO DECK. FINISH AS SCHEDULED. AT TYPE A2, PROVIDE FIRE RATING PER WALL AS SHOWN ON LIFE SAFETY PLANS INCLUDING PROTECTION ON PENETRATIONS AND SEALANT TYPE USED.

A1
A2

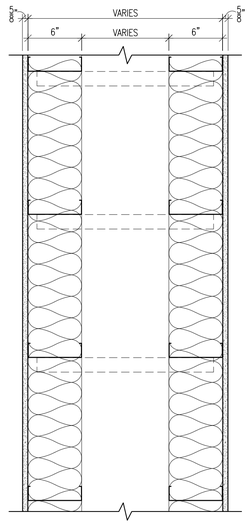
PARTITION TYPES B



8" METAL STUDS AT 16" O.C. BRACED AT 4'-0" O.C. ABOVE CEILING TO DECK ABOVE. SHEATH WITH (1) LAYER OF 5/8" GYPSUM BOARD ON EACH SIDE FROM FLOOR TO DECK AND SEAL TIGHT; FILL WALL WITH ACOUSTIC BATT INSULATION CONTINUOUS FROM FLOOR TO DECK. FINISH AS SCHEDULED.

PARTITION TYPES C

3-5/8" METAL STUDS AT 16" O.C. BRACED AT 4'-0" O.C. ABOVE CEILING TO DECK ABOVE. SHEATH WITH (1) LAYER OF 5/8" GYPSUM BOARD ON EACH SIDE FROM FLOOR TO DECK AND SEAL TIGHT; FILL WALL WITH ACOUSTIC BATT INSULATION CONTINUOUS FROM FLOOR TO DECK. FINISH AS SCHEDULED.

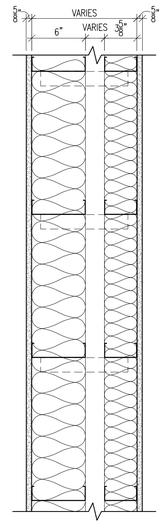


**WIDTH AS NOTED ON PLAN

PARTITION TYPES D

(2) 3-5/8" METAL STUDS AT 16" O.C. BRACED AT 4'-0" O.C. ABOVE CEILING TO DECK ABOVE AND BRACED ACROSS INTERSTITIAL SPACE TO EACH OTHER AT 8'-0" O.C. VERTICALLY TYP. SHEATH WITH (1) LAYER OF 5/8" GYPSUM BOARD ON EACH SIDE FROM FLOOR TO DECK AND SEAL TIGHT; FILL WALL WITH ACOUSTIC BATT INSULATION CONTINUOUS FROM FLOOR TO DECK. FINISH AS SCHEDULED.

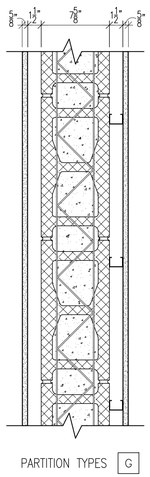
**WIDTH AS NOTED ON PLAN



PARTITION TYPES E1 E2

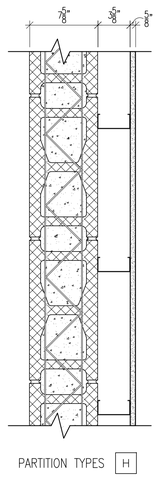
(2) 6" METAL STUDS AT 16" O.C. BRACED AT 4'-0" O.C. ABOVE CEILING TO DECK ABOVE AND BRACED ACROSS INTERSTITIAL SPACE TO EACH OTHER AT 8'-0" O.C. VERTICALLY TYP. SHEATH WITH (1) LAYER OF 5/8" GYPSUM BOARD ON EACH SIDE FROM FLOOR TO DECK AND SEAL TIGHT; FILL WALL WITH ACOUSTIC BATT INSULATION CONTINUOUS FROM FLOOR TO DECK. FINISH AS SCHEDULED. AT TYPE E2, PROVIDE FIRE RATING PER WALL AS SHOWN ON LIFE SAFETY PLANS INCLUDING PROTECTION ON PENETRATIONS AND SEALANT TYPE USED.

E1
E2



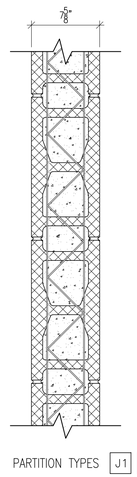
**WIDTH AS NOTED ON PLAN

PARTITION TYPES F1 F2



(1) 6" METAL STUDS AND (1) 3-5/8" METAL STUDS AT 16" O.C. BRACED AT 4'-0" O.C. ABOVE CEILING TO DECK ABOVE AND BRACED ACROSS INTERSTITIAL SPACE TO EACH OTHER AT 8'-0" O.C. VERTICALLY TYP. SHEATH WITH (1) LAYER OF 5/8" GYPSUM BOARD ON EACH SIDE FROM FLOOR TO DECK AND SEAL TIGHT; FILL WALL WITH ACOUSTIC BATT INSULATION CONTINUOUS FROM FLOOR TO DECK. FINISH AS SCHEDULED. AT TYPE F2, PROVIDE FIRE RATING PER WALL AS SHOWN ON LIFE SAFETY PLANS INCLUDING PROTECTION ON PENETRATIONS AND SEALANT TYPE USED.

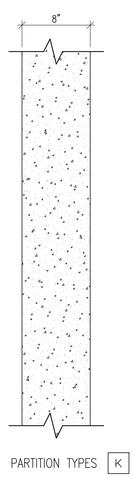
F1
F2



PARTITION TYPES G

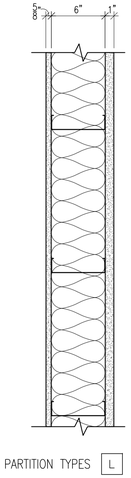
8" CMU FROM FLOOR TO DECK ABOVE. PROVIDE REINFORCING AS INDICATED IN STRUCTURAL DRAWINGS. PROVIDE 1-1/2" METAL FURRING STUDS AT 16" O.C. AND SHEATH WITH 5/8" GYP. BD. FROM FLOOR TO 8" ABOVE CEILING ON BOTH SIDES; FINISH AS SCHEDULED.

PARTITION TYPES H



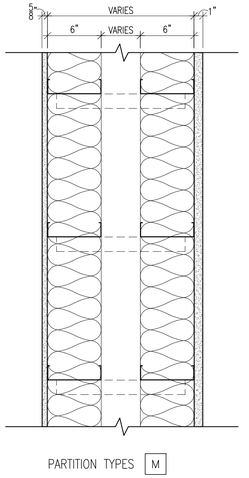
8" CMU FROM FLOOR TO DECK ABOVE. PROVIDE REINFORCING AS INDICATED IN STRUCTURAL DRAWINGS. AT CORRIDOR SIDE, PROVIDE 3-5/8" METAL STUDS AT 16" O.C. AND SHEATH WITH 5/8" GYP. BD. FROM FLOOR TO 8" ABOVE CEILING; FINISH AS SCHEDULED.

PARTITION TYPES J1 J2



8" CMU FROM FLOOR TO DECK ABOVE. PROVIDE REINFORCING AS INDICATED IN STRUCTURAL DRAWINGS. FINISH AS SCHEDULED. PROVIDE FIRE RATING PER WALL AS SHOWN ON LIFE SAFETY PLANS INCLUDING PROTECTION ON PENETRATIONS AND SEALANT TYPE USED. AT TYPE J2, PROVIDE FIRE RATING PER WALL AS SHOWN ON LIFE SAFETY PLANS INCLUDING PROTECTION ON PENETRATIONS AND SEALANT TYPE USED.

F1
F2



PARTITION TYPES K

8" CONCRETE WALL FROM FLOOR TO DECK ABOVE. PROVIDE REINFORCING AS INDICATED IN STRUCTURAL DRAWINGS. FROM FLOOR TO 8" ABOVE CEILING; FINISH AS SCHEDULED.

PARTITION TYPES L

6" METAL STUDS AT 16" O.C. BRACED AT 4'-0" O.C. ABOVE CEILING TO DECK ABOVE. SHEATH WITH (1) LAYER OF 5/8" TYPE "X" GYPSUM BOARD ON FINISH SIDE FROM FLOOR TO DECK AND (1) LAYER OF 1" SHAFT LINER ON THE SHAFT SIDE; SEAL TIGHT. FILL WITH MINERAL WOOL CONTINUOUS FROM FLOOR TO DECK. FINISH AS SCHEDULED. PROVIDE FIRE RATING PER WALL AS SHOWN ON LIFE SAFETY PLANS INCLUDING PROTECTION ON PENETRATIONS AND SEALANT TYPE USED.

PARTITION TYPES M

(2) 6" METAL STUDS AT 16" O.C. BRACED AT 4'-0" O.C. ABOVE CEILING TO DECK ABOVE AND BRACED ACROSS INTERSTITIAL SPACE TO EACH OTHER AT 8'-0" O.C. VERTICALLY. SHEATH WITH (1) LAYER OF 5/8" TYPE "X" GYPSUM BOARD ON FINISH SIDE FROM FLOOR TO DECK AND (1) LAYER OF 1" SHAFT LINER ON THE SHAFT SIDE; SEAL TIGHT. FILL WITH MINERAL WOOL CONTINUOUS FROM FLOOR TO DECK. FINISH AS SCHEDULED. PROVIDE FIRE RATING PER WALL AS SHOWN ON LIFE SAFETY PLANS INCLUDING PROTECTION ON PENETRATIONS AND SEALANT TYPE USED.

PARTITION TYPES

NOTE: ALL PARTITIONS ARE TO BE TYPE 'A' UNLESS MARKED OTHERWISE ON THE PLAN; USE MOISTURE RESISTANT GYPSUM BOARD AT RESTROOMS AND SIDES OF SINK WALLS.

NOTE: SEE STRUCTURAL DRAWINGS FOR ALL SHEAR WALL LOCATIONS; THESE STRUCTURAL DRAWINGS WILL OVERRULE ANY SPECIFIED MATERIAL OR ASSEMBLY SHOWN.

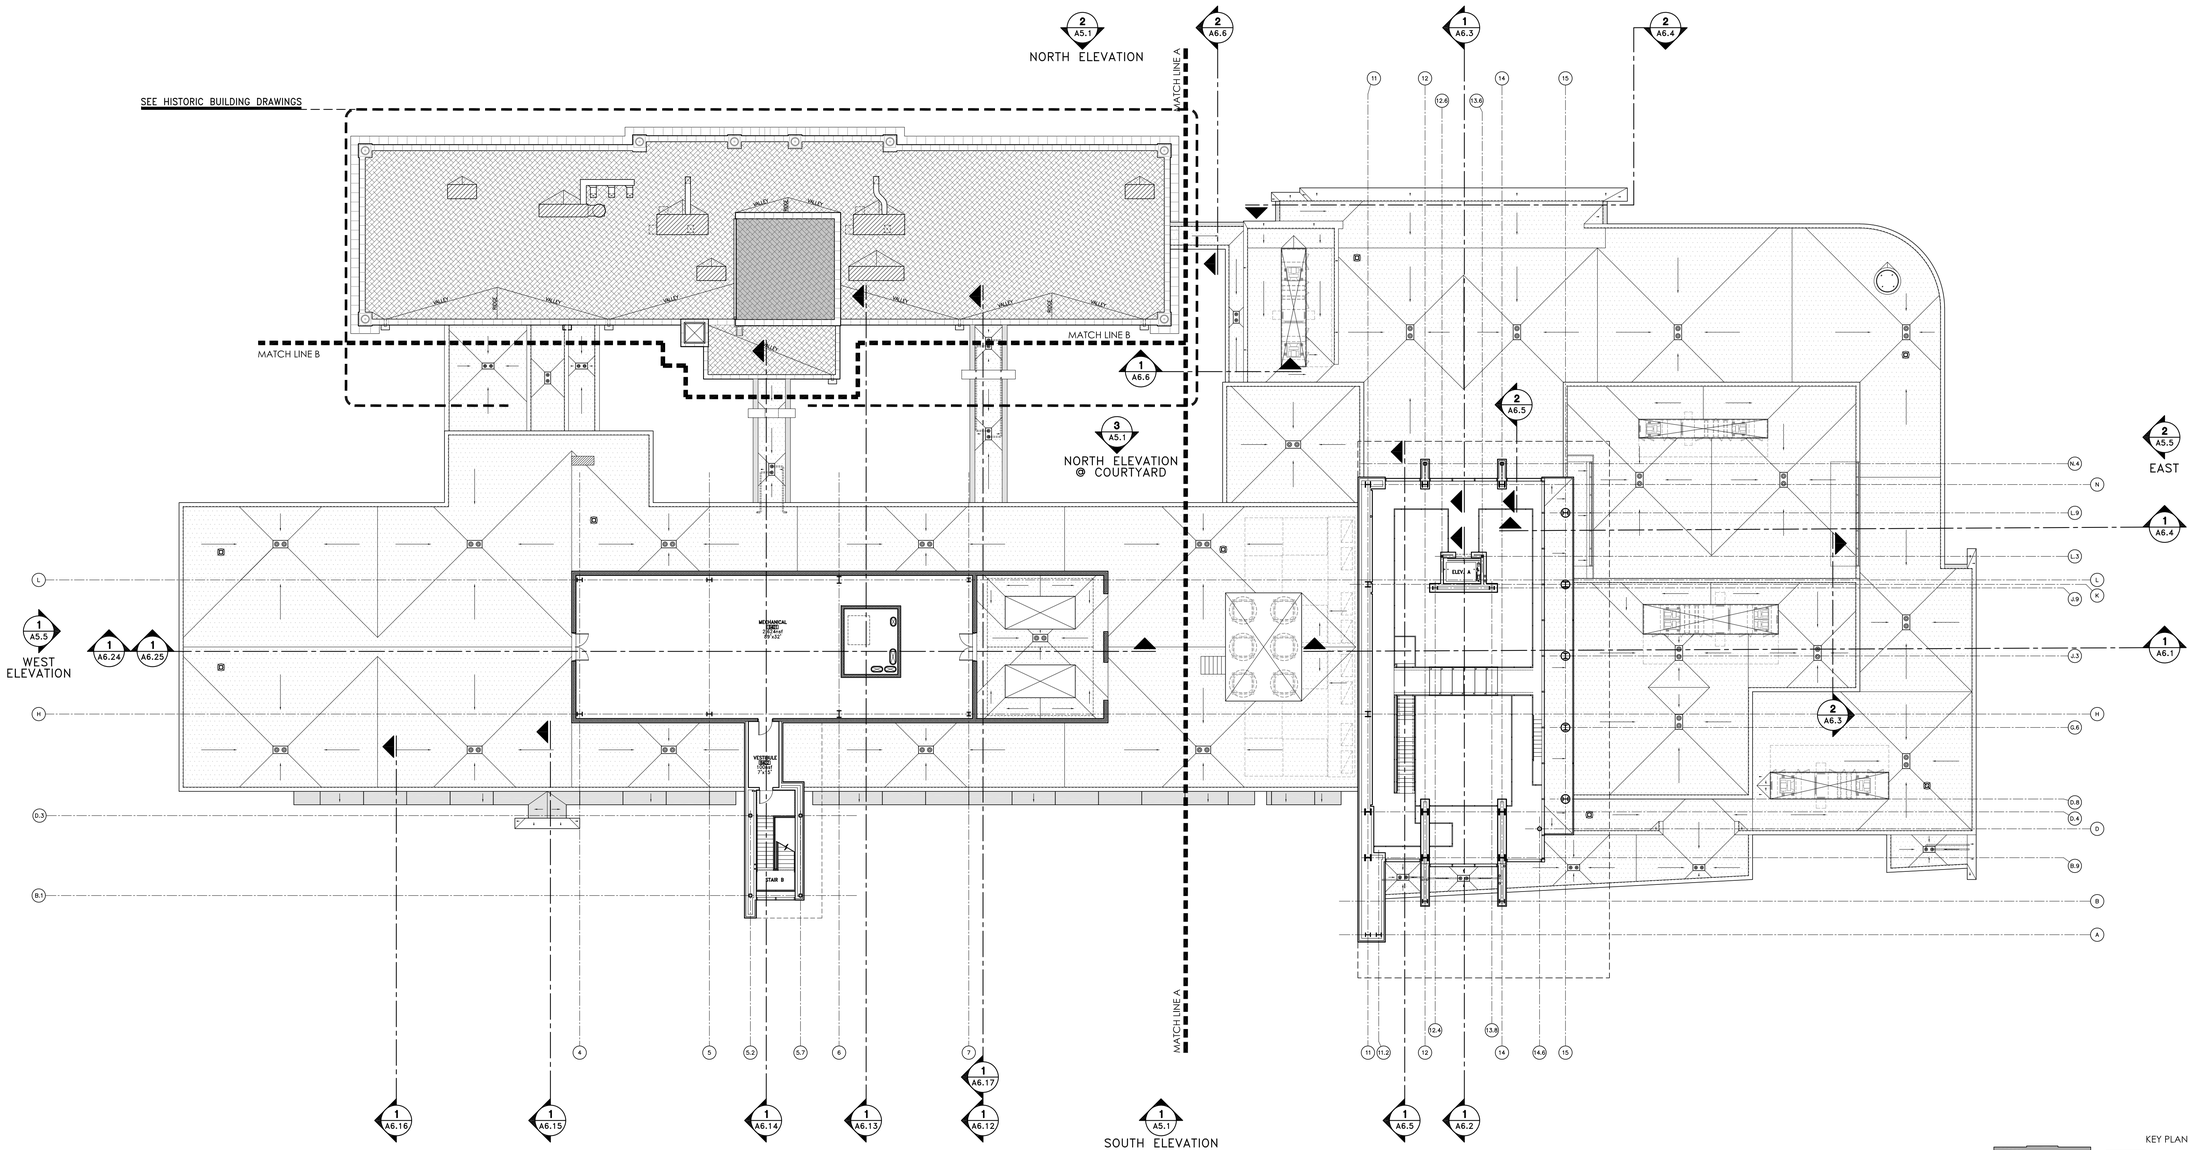
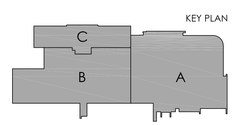
Roof Assembly Notes



2-PLY MODIFIED BITUMINOUS ROOF AT BUILDINGS A AND B



2-PLY MODIFIED BITUMINOUS ROOF ASSEMBLY:

1. 2-PLY MODIFIED BITUMINOUS ROOFING MEMBRANE.
2. ½" COVER BOARD [072100].
3. TAPERED POLYISOCYANURATE INSULATION [072100]; SLOPE AT ¼"/LF MINIMUM.
4. 3" BASE LAYER OF POLYISOCYANURATE INSULATION [072100] UNLESS NOTED OTHERWISE.
5. (1) LAYER OF AIR AND VAPOR BARRIER MEMBRANE OVER ENTIRE ROOF DECK (INSTALL PER MANUFACTURER'S RECOMMENDATIONS).
6. 1½" STEEL ROOF DECKING; RE: STRUCTURAL.

General Roof Notes

1. ALL SHEET METAL WORK INCLUDING FLASHING, GUTTERS, DOWNSPOUTS, CAP FLASHING, ETC. SHALL BE PREFINISHED METAL AND SHALL BE INSTALLED IN ACCORDANCE WITH THE SHEET METAL AND AIR CONDITIONING CONTRACTORS' NATIONAL ASSOCIATION (SMACNA) MANUAL.
2. WATER TEST ALL ROOF PENETRATIONS, GUTTERS, AND DOWNSPOUTS UPON COMPLETION OF PROJECT.
3. PAINT ALL PENETRATIONS TO MATCH ADJACENT ROOF MATERIAL.
4. ARROWS ON ROOF PLAN INDICATE THE DIRECTION OF WATER FLOW; ALL SLOPES ARE TO BE A MINIMUM OF ¼"/LF TOWARDS DRAINS.
5. SEE PLUMBING DRAWINGS ROOF DRAIN SIZES.
6. RE: DIVISION 7 SPECIFICATIONS FOR ROOFING PRODUCTS.
7. CONTRACTOR TO CONSULT ARCHITECT IMMEDIATELY IF DISCREPANCIES ARE FOUND BETWEEN ARCHITECTURAL AND ENGINEERING DRAWINGS.
8. ALL ANGLES ARE 90° OR 45° UNLESS DIMENSIONED OTHERWISE.
9. SEE A2.x SHEETS FOR FLOOR PLANS.
10. SEE A4.X SHEETS FOR REFLECTED CEILING PLANS.

Roof Plan - Part A

SCALE: 1/8" = 1'-0"

ROOF DRAINAGE CALCULATIONS

The following conditions were used in sizing the roof drainage system and were based on the requirements the 2012 INTERNATIONAL PLUMBING CODE.

- The roof drainage system was designed to handle a 100 year maximum rainfall of 4.5 inches per hour. This is based on IPC FIGURE 1106.1 100-YEAR, 1-HOUR RAINFALL FOR THE EASTERN UNITED STATES.
- For calculating the size of the roof drainage system , the minimum slope of the horizontal branches was used since it is the most restrictive part of the roof drainage system. From IPC TABLE 1106.3 SIZE OF HORIZONTAL STORM DRAINAGE PIPING, the following horizontal pipe sizes will drain the roof areas shown below for the 100 year maximum rainfall at 4.5 inches per hour based on the minimum 1/8 inch per linear foot horizontal pipe slope.
- The calculated roof areas are shown on the roof plans. This area also includes in the total all vertical surfaces draining into each roof area. The vertical surfaces are calculated at one half of the area. (IPC 1106.4)
- The secondary drainage system shall have the end point of discharge separate from the primary system and discharged above grade in a location normally observed. The secondary drainage system shall be sized based on the rainfall rate for which the primary system is sized. Scuppers shall have an opening dimension of not less than 4 inches. The flow through the primary system shall not be considered when sizing the secondary roof drain system. (IPC 1108.3)
- All drain pipes to be wrapped in sound insulation for horizontal and vertical runs.

PIPE SIZE (1% SLOPE)	MAX ROOF AREA DRAINED
3"ø	657 SQUARE FEET
4"ø	1,504 SQUARE FEET
5"ø	2,672 SQUARE FEET
6"ø	4,280 SQUARE FEET
8"ø	9,200 SQUARE FEET

adapted from Table 1106.3, IPC 2012

General RCP Notes

1. CONTRACTOR TO CONSULT ARCHITECT IMMEDIATELY IF DISCREPANCIES ARE FOUND BETWEEN ARCHITECTURAL AND ENGINEERING DRAWINGS.
2. ALL ANGLES ARE 90° OR 45° UNLESS DIMENSIONED OTHERWISE.
3. SEE A2.x SHEETS FOR FLOOR PLANS.
4. SEE A3.x SHEETS FOR ROOF PLANS.
5. SEE A5.x SHEETS FOR EXTERIOR ELEVATIONS.
6. SEE A6.x SHEETS FOR BUILDING SECTIONS.
7. SEE A8.x SHEETS FOR DOOR SCHEDULE/FRAME ELEVATIONS AND WINDOW SCHEDULE/WINDOW ELEVATIONS.
8. SEE A9.x SHEETS FOR FINISH SCHEDULES AND FINISH FLOOR PLANS.
9. SEE A10.x SHEETS FOR INTERIOR ELEVATIONS.
10. SEE A11.x SHEETS FOR VERTICAL CIRCULATION.

RCP Notes

1. SEE MECHANICAL DRAWINGS FOR ANY MECHANICAL FIXTURES THAT MAY NOT BE SHOWN ON THIS PLAN.
2. SEE ELECTRICAL DRAWINGS FOR ANY ELECTRICAL FIXTURES THAT MAY NOT BE SHOWN ON THIS PLAN.
3. LIGHT FIXTURE TAGS PROVIDE ON THE DRAWINGS AND WITHIN THE RCP LEGEND REPRESENT TYPES OF FIXTURES, NOT SPECIFIC SPECIFIC. THESE TAGS ARE CLOSELY COORDINATED WITH THOSE FOUND THROUGHOUT THE ELECTRICAL DRAWINGS, THOUGH DIFFERENCES MAY EXIST.
4. PROVIDE ALL BLOCKING AND HANGERS REQUIRED TO SECURELY FASTEN LIGHT FIXTURES TO STRUCTURE.
5. SINGLE LIGHT FIXTURES ON CEILING ARE TO BE CENTERED IN SPACE UNLESS NOTED OTHERWISE.
6. TWO OR MORE CEILING FIXTURES IN A ROW ARE TO BE EQUALLY SPACED AND CENTERED IN SPACE UNLESS NOTED OTHERWISE.
7. A MOCK-UP OF EACH PENDANT LIGHT FIXTURE TYPE AT EACH VARYING CEILING HEIGHT SHALL BE REVIEWED AND APPROVED BY ARCHITECT FOR LENGTH OF DROP PRIOR TO INSTALLING.

1. SEE MECHANICAL DRAWINGS FOR ANY MECHANICAL FIXTURES THAT MAY NOT BE SHOWN ON THIS PLAN.
2. SEE ELECTRICAL DRAWINGS FOR ANY ELECTRICAL FIXTURES THAT MAY NOT BE SHOWN ON THIS PLAN.
3. LIGHT FIXTURE TAGS PROVIDE ON THE DRAWINGS AND WITHIN THE RCP LEGEND REPRESENT TYPES OF FIXTURES, NOT SPECIFIC SPECIFIC. THESE TAGS ARE CLOSELY COORDINATED WITH THOSE FOUND THROUGHOUT THE ELECTRICAL DRAWINGS, THOUGH DIFFERENCES MAY EXIST.
4. PROVIDE ALL BLOCKING AND HANGERS REQUIRED TO SECURELY FASTEN LIGHT FIXTURES TO STRUCTURE.
5. SINGLE LIGHT FIXTURES ON CEILING ARE TO BE CENTERED IN SPACE UNLESS NOTED OTHERWISE.
6. TWO OR MORE CEILING FIXTURES IN A ROW ARE TO BE EQUALLY SPACED AND CENTERED IN SPACE UNLESS NOTED OTHERWISE.
7. A MOCK-UP OF EACH PENDANT LIGHT FIXTURE TYPE AT EACH VARYING CEILING HEIGHT SHALL BE REVIEWED AND APPROVED BY ARCHITECT FOR LENGTH OF DROP PRIOR TO INSTALLING.

Joint Approval

ALL REVEAL, CONTROL, AND EXPANSION JOINTS ARE TO BE LAID OUT FOR REVIEW AND APPROVAL BY ARCHITECT PRIOR TO COMMENCEMENT OF STUCCO INSTALLATION

Joint Type Notes

1. REVEAL JOINTS ARE LABELED 'RJ'; STANDARD CONTROL JOINTS ARE LABELED 'CJ'; EXPANSION JOINTS ARE LABELED 'EJ'.
2. ¾" PERIMETER REVEAL IS TO BE 'PLASTER KEY REVEAL MOLDING PRZ-75-75' BY FRY REGLET OR EQUAL.
3. 2" VENTED SOFFIT MOLDING IS TO BE 'PERIMETER SOFFIT MOLDING 1680-V' BY FRY REGLET OR EQUAL.
4. STANDARD REVEAL JOINT IS TO BE 'CHANNEL SCREED/CONTROL JOINT PCS-75-75' BY FRY REGLET OR EQUAL.
5. EXPANSION JOINTS ARE TO BE SILICON COMPRESSION/EXTENSION SEALS 'CE-SX SERIES CE-200SX' BY BALCO INC OR EQUAL; COLOR IS TO EXACTLY MATCH STUCCO.

NUMBERED WINDOW NOTES:

1. PROVIDE FLASHING @ HEAD, JAMBS, & SILL OF WINDOW.
2. FIRE-RESISTANCE RATED FRAME & GLAZING.
3. PROVIDE LEVEL 3 BULLET RESISTANT GLAZING MOUNTED BETWEEN VERTICAL CURTAIN WALL MULLIONS; MOUNT TO MULLIONS USING STAINLESS STEEL CHANNELS; LEAVE 2" GAP BETWEEN BOTTOM OF BULLET RESISTANT GLAZING AND TOP OF CURTAIN WALL SILL MULLION AND BETWEEN TOP OF BULLET RESISTANT GLAZING AND ADJACENT CEILING ELEVATION FOR AIR MOVEMENT BETWEEN EXTERIOR GLAZING AND BULLET RESISTANT GLAZING (PANELS WILL BE APPROXIMATELY 7'-8" TALL).
4. PROVIDE INTEGRATED ALUMINUM PARAPET CAP; CAP FINISH IS TO EXACTLY MATCH WINDOW SYSTEM FRAMING AND IS TO BE PROVIDED BY THE WINDOW SYSTEM MANUFACTURER.
5. GLAZING IS TO BE TRANSLUCENT FOR PRIVACY.
6. STRUCTURAL SILICON GLAZED WINDOW SYSTEM.
7. ALL GLASS WINDOW SYSTEM.
8. PROVIDE ¾" SURFACE APPLIED ETCHED SIGNAGE THREAD AS INDICATED ON WINDOW ELEVATIONS; ETCHED THREADS ARE TO ALIGN WITH WALL REVEALS.
9. STOREFRONT SYSTEM IS TO BE INSTALLED IN A HORIZONTAL ORIENTATION AS A INTERIOR CEILING; SEE REFLECTED CEILING PLANS.

Glass Schedule

- (A) 1" CLEAR INSULATED GLAZING [088000]
- (B) OMITTED

Window Type Legend

CW-A 1600 WALL SERIES I BY KAWNEER OR EQUAL (EXTERIOR APPLICATION)
2½" SIGHT LINE; 7½" FRAME DEPTH; ANODIZED ALUMINUM FINISH
FRONT PLANE, OUTSIDE GLAZED

CW-B 1600 WALL SERIES I BY KAWNEER OR EQUAL (EXTERIOR APPLICATION)
2½" SIGHT LINE; 6" FRAME DEPTH; ANODIZED ALUMINUM FINISH
FRONT PLANE, OUTSIDE GLAZED
INTEGRATED ALUMINUM PARAPET CAP PROVIDED BY WINDOW MANUFACTURER

CW-C 1620 SSG CURTAIN WALL SYSTEM BY KAWNEER OR EQUAL (EXTERIOR APPLICATION)
2" SIGHT LINE; 6" FRAME DEPTH; ANODIZED ALUMINUM FINISH
FRONT PLANE, OUTSIDE GLAZED
INTEGRATED ALUMINUM PARAPET CAP PROVIDED BY WINDOW MANUFACTURER

CW-D 1620 SSG CURTAIN WALL SYSTEM BY KAWNEER OR EQUAL (EXTERIOR APPLICATION)
2" SIGHT LINE; 7½" FRAME DEPTH; ANODIZED ALUMINUM FINISH
FRONT PLANE, OUTSIDE GLAZED
INTEGRATED ALUMINUM PARAPET CAP PROVIDED BY WINDOW MANUFACTURER

SF-A TRIFAB VG 451 BY KAWNEER OR EQUAL (EXTERIOR APPLICATION)
2" SIGHT LINE; 4½" FRAME DEPTH; ANODIZED ALUMINUM FINISH
FRONT PLANE, OUTSIDE GLAZED

SF-B TRIFAB VG 450 BY KAWNEER OR EQUAL (INTERIOR APPLICATION)
1¾" SIGHT LINE; 4½" FRAME DEPTH; ANODIZED ALUMINUM FINISH
FRONT PLANE, OUTSIDE GLAZED

SF-C TRIFAB VG 450 SSG BY KAWNEER OR EQUAL (INTERIOR APPLICATION)
1¾" SIGHT LINE; 4½" FRAME DEPTH; ANODIZED ALUMINUM FINISH
FRONT PLANE, OUTSIDE GLAZED

SF-D ALL GLASS ENTRANCE MODEL NO. 51GSF BY OLDCASTLE OR EQUAL (INTERIOR APPLICATION)
¾" GLASS FOR VERTICAL GLASS PANELS AND DOORS; BOTTOM PATCH LOCK AT EACH DOOR; PATCH FITTINGS AT TOP AND BOTTOM PIVOT POINTS WITH CONCEALED FLOOR CLOSER

SF-E ENCORE BY KAWNEER OR EQUAL (EXTERIOR APPLICATION)
1¾" SIGHT LINE; 4½" FRAME DEPTH; ANODIZED ALUMINUM FINISH
FRONT PLANE, OUTSIDE GLAZED

FW-A GPX ARCHITECTURAL SERIES BY SAFTIFIRST OR EQUAL (INTERIOR APPLICATION)
2½" SIGHT LINE; 4" FRAME DEPTH; ANODIZED ALUMINUM FINISH; SUPERLITE II-XL GLAZING
60-MINUTE FRAME; 60-MINUTE DOOR; 60-MINUTE GLAZING

** SUBSTITUTIONS BY OTHER MANUFACTURERS ARE ACCEPTABLE AND MUST BE SUBMITTED TO ARCHITECT FOR APPROVAL. WINDOW SYSTEMS ARE TO BE INSTALLED PER MANUFACTURER'S RECOMMENDATIONS. ALL FRAME DEPTHS ARE TO BE VERIFIED BY WINDOW MANUFACTURER ENGINEER'S BASED ON LOADS PROVIDED IN STRUCTURAL DRAWINGS. CONTRACTOR SHALL PROVIDE ROUGH OPENINGS AS REQUIRED BY MANUFACTURER DOCUMENTATION. SUBMIT SHOP DRAWINGS OF ALL FRAMES FOR APPROVAL BY ARCHITECT.

NUMBERED FINISH NOTES:

1. MULTIPLE FLOOR FINISHES ARE USED IN THIS SPACE; SEE FINISH FLOOR PLANS FOR PATTERNS AND LOCATIONS OF FINISHES.
2. MULTIPLE WALL FINISHES ARE USED IN THIS SPACE; SEE INTERIOR ELEVATIONS FOR PATTERNS AND LOCATIONS OF FINISHES (INCLUDING REVEALS WHERE APPLICABLE).
3. MULTIPLE CEILING FINISHES ARE USED IN THIS SPACE; SEE REFLECTED CEILING PLANS FOR PATTERNS AND LOCATIONS OF FINISHES.
4. THIS SPACE CONTAINS FINISHED MILLWORK; SEE INTERIOR ELEVATIONS AND MILLWORK DETAILS FOR WOOD FINISHES.
5. THERE ARE MULTIPLE TYPES OF FLOOR FINISHES AND RAILING TYPES AT SPANNING BRIDGE INCLUDING STRUCTURAL GLASS FLOORING AND LAMINATED GLASS RAILINGS; SEE INTERIOR ELEVATIONS AND FINISH FLOOR PLANS FOR LOCATIONS OF EACH.
6. PROVIDE PLEXIGLASS WALL COVERING TO A HEIGHT OF 4'-0" AFF AND HORIZONTALLY 4'-0" FROM THE EDGE OF THE NEAREST WATER SOURCE.
7. A PORTION OF THE CEILING IS STOREFRONT SYSTEM WITH TRANSLUCENT GLAZING; RE: WINDOW SCHEDULE AND ELEVATIONS.
8. PRESS BRIEFING ROOM HAS AN ELEVATED PRESENTATION STAGE AND PODIUM; SEE INTERIOR ELEVATIONS; WOOD FINISHES ARE TO MATCH WD-11.
9. MULTIPLE CEILING HEIGHTS EXIST IN THIS SPACE; SEE REFLECTED CEILING PLANS FOR HEIGHTS.
10. FLOOR LEVEL SLOPES DUE TO RAMP; CEILING HEIGHT IS MEASURED FROM FIRST FLOOR ELEVATION.
11. THIS SPACE CONTAINS POWDER COATED STEEL CASEWORK BY MOTT INDUSTRIES OR EQUAL; SEE INTERIOR ELEVATIONS; PROVIDE STAINLESS STEEL COUNTERTOPS.
12. NORTH WALL OF VESTIBULE SHALL BE EXPOSED CMU; PAINT TO MATCH ADJACENT GYPSUM BOARD.
13. PROVIDE EMBEDDED ALUMINUM STAIR NOSING BY BALCO OR EQUAL; TYPE T-213 IN 2 INCH WIDTH WITH TYPE 6 CAST-IN ANCHOR.
14. ALL EXPOSED STRUCTURE AT CEILING IS TO BE PAINTED.
15. SMOOTH, HARD, NONABSORBENT SURFACE NOT REQUIRED IN THIS RESTROOM AT SERVICE SINKS, URINALS, AND WATER CLOSETS PER IBC 2012, 1210.2.2, EXCEPTION #2.
16. SMOOTH, HARD, NONABSORBENT SURFACE REQUIRED AT ALL WALLS AND PARTITIONS WITHIN 2 FEET OF SERVICE SINKS, URINALS, AND WATER CLOSETS TO A HEIGHT NOT LESS THAN 48 INCHES ABOVE FLOOR PER IBC 2012, 1210.2.2.
17. SMOOTH, HARD, NONABSORBENT SURFACE REQUIRED AT ALL SHOWER COMPARTMENTS TO A HEIGHT NOT LESS THAN 70 INCHES ABOVE DRAIN INLET PER IBC 2012, 1210.3.
18. PROVIDE STAINLESS STEEL, SLIP-RESISTANT STAIR NOSING "TREP-E" BY SCHLUTER OR EQUAL; NOSING HEIGHT AT FINISH FLOOR EDGE IS TO BE 2MM (5/32") FOR ABUTMENT TO ADJACENT RUBBER FLOORING; SET NOSING IN A CONTINUOUS BED OF STRUCTURAL EPOXY ADHESIVE; PROVIDE END CAP ACCESSORIES AS REQUIRED; TYPICAL AT CAST-IN-PLACE CONCRETE PORTIONS OF STAIR A WITHIN THE POLICE LOBBY.
19. STEEL FLOOR GRATING IN THIS SPACE SERVES AS PART OF THE SMOKE EVACUATION SYSTEM; SEE BUILDING SECTIONS AND STRUCTURAL DRAWINGS FOR ADDITIONAL INFORMATION.
20. SEE INTERIOR ELEVATIONS FOR SURFACE MOUNTED MIRROR LOCATIONS.
21. LIGHT FIXTURES IN STAIR B ARE TO BE RECESSED LINEAR FIXTURES MOUNTED INTO THE SIDE WALLS; SEE INTERIOR ELEVATIONS AND ELECTRICAL DRAWINGS FOR ADDITIONAL INFORMATION.
22. THE EAST END OF THIS SPACE SERVES AS PART OF THE SMOKE EVACUATION SYSTEM; SEE INTERIOR ELEVATIONS AND REFLECTED CEILING PLANS FOR ADDITIONAL INFORMATION AND VENT LOCATIONS.
23. THE PERFORATED METAL CEILING SYSTEM IN THIS SPACE SERVES AS PART OF THE SMOKE EVACUATION SYSTEM; SEE INTERIOR ELEVATIONS AND REFLECTED CEILING PLANS FOR ADDITIONAL INFORMATION AND VENT LOCATIONS.

Finish Schedule Codes

FLOORING

PORCELAIN TILE
- PCT-1 — 12"x12" TILE PER SECTION 093000 - COLOR: AV203 PENNSYLVANIA BLUE UPS BLUESTONE SERIES BY CROSSVILLE OR EQUAL
- PCT-8 — 2"x2" MOSAIC TILE PER SECTION 09300 - COLOR: AV203 PENNSYLVANIA BLUE UPS WITH CROSS-SHEEN FINISH; BLUESTONE SERIES BY CROSSVILLE OR EQUAL

RUBBER FLOORING
- RF-1 — NORAPLAN SENTIKA - COLOR: 6522 EXPEDITION 3MM (DARK GREY) NORA SYSTEMS, INC. OR EQUAL
- RF-2 — NORAPLAN SENTIKA - COLOR: 6520 SNOW DAY 3MM (LIGHT GREY) NORA SYSTEMS INC. OR EQUAL
- RF-3 — NORAPLAN SENTIKA - COLOR: 6505 SILK 3MM (WHITE) NORA SYSTEMS INC. OR EQUAL
- RF-4 — NORAPLAN SENTIKA - COLOR: 6531 REGATTA 3MM (BLUE) NORA SYSTEMS INC. OR EQUAL
- RF-5 — NORAPLAN SENTIKA - COLOR: 6537 CAMP FIRE 3MM (BROWN) NORA SYSTEMS INC. OR EQUAL
- RF-6 — NORAMENT ROUND STAIRTREADS - COLOR: TBD NORA SYSTEMS INC. OR EQUAL
- RB-2 — 24"x24" ATHLETIC FLOORING - COLOR: JET BLUE 6MM REZTEC SERIES BY EXPANKO RESILIENT FLOORING OR EQUAL

LUXURY VINYL TILE
- LVT-1 — 4"x36" LUXURY VINYL FLOORING - COLOR: VERMONT CHERRY 3408 VENUE WOOD SERIES BY TANDUS CENTIVA OR EQUAL
- LVT-2 — 18"x18" LUXURY VINYL FLOORING - COLOR: NIMBUS SP113 OPUS SERIES BY KARNDEAN DESIGN FLOORING OR EQUAL

CARPET
- CPT-1 — 24x24 CARPET TILE PER SECTION 096813 - STYLE: T502 RESONATE; COLOR: 50208 AZORES; SPEAK COLLECTION BY MASLAND CONTRACT OR EQUAL
- CPT-2 — 24x24 CARPET TILE PER SECTION 096813 - STYLE: BRILLIANCE TILE 59259; COLOR: BLACK FOREST 29500; SHADE COLLECTION BY SHAW CONTRACT OR EQUAL
- CPT-3 — 24x24 CARPET TILE PER SECTION 096813 - STYLE: FORM 5T136; COLOR: CORNERSTONE COPPER 33555; NOBLE MATERIALS COLLECTION BY SHAW CONTRACT OR EQUAL
- CPT-4 — 12' ROLL CARPET - STYLE: TWINE 60748; COLOR: GOOD LIFE 50220 SILK COLLECTION BY SHAW CONTRACT OR EQUAL

SEALED CONCRETE
- SC-1 — SEALED CONCRETE SURFACE PER SECTION 099123 - COLOR: CLEAR H&C SOLVENT BASED STAIN BY SHERWIN WILLIAMS OR EQUAL; SUBMIT COLOR SAMPLES TO ARCHITECT FOR APPROVAL

ACCESS FLOORING
- AX-1 — 24"x24" ACCESS FLOORING PANELS PER SECTION 096900 - CONCORE 1250 BY TATE ACCESS FLOORS, INC.; PROVIDE RF-2 FINISH ON PANELS

STRUCTURAL GLASS FLOORING
- SGF-1 — 1" LAMINATED STRUCTURAL GLASS FLOORING SYSTEM WITH ALUMINUM SUPPORT BEAMS; SUBMIT COLORS AND FRIT PATTERNS FOR APPROVAL; GLASS WALK SG BY INNOVATIVE BUILDING PRODUCTS OR EQUAL

WALLS

PAINT
- VP-1 — FIELD COLOR - COLOR: COUNTERPOINT PFX-5205 (BLUE) ZOLATONE INTERIOR COATINGS OR EQUAL
- PT-1 — FIELD COLOR - COLOR: TBD, EGG SHELL SHERWIN-WILLIAMS OR EQUAL PER SECTION 099123
- PT-2 — ACCENT COLOR - COLOR: TBD, EGG SHELL SHERWIN-WILLIAMS OR EQUAL PER SECTION 099123
- PT-3 — TRIM COLOR - COLOR: TBD, GLOSS SHERWIN-WILLIAMS OR EQUAL PER SECTION 099123
- PT-4 — STANDARD WHITE, FLAT (CEILINGS) SHERWIN-WILLIAMS OR EQUAL PER SECTION 099123
- PT-5 — FIELD COLOR - COLOR: EXACTLY MATCHING EXTERIOR STUCCO, EGG SHELL SHERWIN-WILLIAMS OR EQUAL PER SECTION 099123
- EPT-1 — EPOXY - COLOR: TBD SHERWIN-WILLIAMS OR EQUAL PER SECTION 099123

CERAMIC TILE
- CT-2 — OMITTED

PORCELAIN TILE
- PCT-6 — 12"x12" TILE PER SECTION 09300 - COLOR: VS75 CADET WHITE POLISHED TO CEILING EMPIRE SERIES BY CROSSVILLE OR EQUAL

SCULPTED WALL SURFACE
- SWS-1 — ART DIFFUSION STYLE SOT002X4 - SANDED AND PRIMED; FIELD PAINT WITH PT-1; INTERLAM OR EQUAL

WOOD
- WD-11 — ¾" STAIN GRADE WOOD SHEATHING MILLWORK - COLOR: CHERRY (SHALL MATCH LVT-1 FLOORING); SUBMIT SAMPLES FOR APPROVAL
- WD-12 — STAIN GRADE WOOD WAINSCOTING - COLOR: CHERRY (SHALL MATCH LVT-1 FLOORING); SUBMIT SAMPLES FOR APPROVAL
- WD-13 — 1x6 STAIN GRADE TONGUE-AND-GROOVE WOOD PLANKS - COLOR: CHERRY (SHALL MATCH LVT-1 FLOORING); SUBMIT SAMPLES FOR APPROVAL

CEILINGS

ACOUSTIC TILE
- LAT-2 — 24"x24" MOISTURE RESISTANT LAY-IN ACOUSTICAL TILE PER SECTION 095100 - CERAMAGUARD 605 UNPERFORATED SQUARE EDGE W/ 15/16 PRELUDE SUSPENSION SYSTEM BY ARMSTRONG OR EQUAL
- LAT-3 — 24"x24" LAY-IN ACOUSTICAL TILE PER SECTION 095100 - DUNE 1775 BEVELED TEGULAR EDGE (24X24) W/ 9/16" SUPRAFINE SUSPENSION SYSTEM BY ARMSTRONG OR EQUAL
- LAT-6 — 22"x94"x2" VERTICAL ACOUSTICAL PANEL - SOUNDSCAPES BLADES 3923-WH W/ FOUR POINT HANGING KIT BY ARMSTRONG OR EQUAL
- LAT-7 — 24"x24"6%" PERFORATED ALUMINUM CEILING TILES - METALWORKS 6464-M2-WH MIRCROPERFORATED SQUARE TEGULAR EDGE W/ 9/16" SUPRAFINE SUSPENSION SYSTEM; NO ACOUSTICAL FLEECE REQUIRED; ARMSTRONG OR EQUAL
- LAT-8 — 24"x48" LAY-IN ACOUSTICAL TILE PER SECTION 095100 - DUNE 1777 BEVELED TEGULAR EDGE W/ 9/16" SUPRAFINE SUSPENSION SYSTEM BY ARMSTRONG OR EQUAL

ACOUSTICAL PLASTER
- AP-1 — 1½" ACOUSTICAL PLASTER ASSEMBLY - BASWAPHON SOUND ABSORBING PLASTER SYSTEM BY BASWA ACOUSTIC NORTH AMERICA, LLC OR EQUAL

PAINT
- PT-4 — FIELD COLOR - COLOR: WHITE, FLAT SHERWIN-WILLIAMS OR EQUAL PER SECTION 099123
- PT-5 — FIELD COLOR - COLOR: BLACK, FLAT SHERWIN-WILLIAMS OR EQUAL PER SECTION 099123

CERAMIC TILE
- CT-2 — SEE CT-2 UNDER WALL TILE

BASE

PORCELAIN TILE BASE
- PCTB-1 — 4x12 BULLNOSE COVE BASE TO CORRESPOND WITH PCT-1. SEE FLOOR TILE.

METAL
- MTL-1 — 4" REVEAL BASE - COLOR: BLACK; DRMB-625-400 BY FRY REGLET OR EQUAL

RUBBER BASE
- RB-3 — 4" RUBBER BASE - COLOR: 078 UMBER FLEXCO OR EQUAL
- RB-4 — 4" RUBBER BASE - COLOR: 067 TRUE BLUE FLEXCO OR EQUAL (TO BE USED WITH RB-2)

MISCELLANEOUS

- QTZ-1 — QUARTZ COUNTERTOP PER SECTION 123600 - MYSTIC BLUE CT407 HANSTONE OR EQUAL
- SS-1 — STAINLESS STEEL COUNTERTOP BY SECTION 123600
- SOS-1 — SOLID SURFACE COUNTERTOP BY SECTION 123600 COLOR: AS SELECTED - MATTE FINISH CORIAN BY DUPONT OR EQUAL
- PLAM-1 — PLASTIC LAMINATE CABINET FACING SURFACES BY SECTION 064100 COLOR: AS SELECTED - MATTE FINISH BY WILSONART OR EQUAL
- PLAM-2 — PLASTIC LAMINATE COUNTERTOP SURFACES BY SECTION 064100 COLOR: AS SELECTED - MATTE FINISH BY WILSONART OR EQUAL
- PLAM-3 — PLASTIC LAMINATE WALL FACING SURFACES BY SECTION 064100 COLOR: DESIGNER WHITE D354K-01 W/ GLOSS FINISH BY WILSONART OR EQUAL
- PLAM-4 — PLASTIC LAMINATE CABINET FACING SURFACES BY SECTION 064100 COLOR: DOVE GREY D92-60 (SOLID GRAY) - MATTE FINISH BY WILSONART OR EQUAL
- PLAM-5 — PLASTIC LAMINATE CABINET FACING SURFACES BY SECTION 064100 COLOR: COFFEE BEAN D485-60 (SOLID BROWN) - MATTE FINISH BY WILSONART OR EQUAL
- MLAM-1 — METAL LAMINATE - COLOR: MATTE NATURAL ALUMINUM #6252(419); WILSONART OR EQUAL
- MLAM-2 — METAL LAMINATE - COLOR: SATIN BRUSHED GOLD ALUMINUM #6258(419); WILSONART OR EQUAL
- WD-4 — STAIN GRADE WOOD CABINETS - COLOR: CHERRY (SHALL MATCH LVT-1 FLOORING); SUBMIT SAMPLES FOR APPROVAL
- GL-3 — ¾" CLEAR LAMINATED GLASS RAILING WITH 316 STAINLESS STEEL STANDOFFS FOR MOUNTING TO STEEL SUPPORT STRUCTURE; C.R. LAWRENCE CO. OR EQUAL
- GL-4 — ¾" CLEAR LAMINATED GLASS RAILING WITH EMBED SHOE MOUNT FOR FOR CONCRETE SUBTRATES; C.R. LAWRENCE CO. OR EQUAL
- TERR-3 — 1½" PRECAST TERRAZZO STAIR TREADS; SUBMIT COLOR SAMPLES FOR APPROVAL

Finish Sched. Gen. Notes

1. CONTRACTOR TO CONSULT ARCHITECT IMMEDIATELY IF DISCREPANCIES ARE FOUND BETWEEN ARCHITECTURAL AND ENGINEERING DRAWINGS.
2. ALL ANGLES ARE 90° OR 45° UNLESS DIMENSIONED OTHERWISE.
3. SEE A2.x SHEETS FOR FLOOR PLANS.
4. SEE A3.x SHEETS FOR ROOF PLANS.
5. SEE A4.X SHEETS FOR REFLECTED CEILING PLANS.
6. SEE A5.x SHEETS FOR EXTERIOR ELEVATIONS.
7. SEE A6.x SHEETS FOR BUILDING SECTIONS.
8. SEE A8.x SHEETS FOR DOOR SCHEDULE/FRAME ELEVATIONS AND WINDOW SCHEDULE/WINDOW ELEVATIONS.
9. SEE A9.x SHEETS FOR FINISH SCHEDULE AND FINISH FLOOR PLANS.
10. SEE A10.x SHEETS FOR INTERIOR ELEVATIONS.
11. SEE A11.x SHEETS FOR VERTICAL CIRCULATION.

General Finish Notes

1. ALL FLOORS TO BE PROPERLY PREPPED AND FLOATED AS NECESSARY.
2. ALL EXPOSED LOUVERS, REGISTERS, VENTS, ETC. ARE TO BE PAINTED TO MATCH SURROUNDING CONDITIONS.
3. AT ALL FLOORING PRODUCT TRANSITIONS, PROVIDE NECESSARY ACCESSIBLE TRANSITION MATERIALS. RE: SHEET A9.0c FOR THRESHOLD/FLOORING TRANSITION DETAILS.
4. ALL PORCELAIN TILE FLOORING TO MEET OR EXCEED STATIC COEFFICIENT OF FRICTION (SLIP RESISTANCE) A.D.A. STANDARD OF 0.60 FOR ACCESSIBLE ROUTES.
5. APPLY THOROUGH WATERPROOFING MASTIC BEHIND ALL WALL TILE, FLOOR TILE, AND CURB TILE IN RESTROOMS.
6. ALL EXPOSED STEEL COLUMNS, BEAMS, TRUSSES, JOISTS, DECKING, ETC. IS TO BE PRIMED AND PAINTED PER SECTION 9 SPECIFICATIONS.
7. SUBMIT COLOR SAMPLES FOR ALL PRODUCTS TO ARCHITECT FOR APPROVAL.

NUMBERED FINISH NOTES:

1. MULTIPLE FLOOR FINISHES ARE USED IN THIS SPACE; SEE FINISH FLOOR PLANS FOR PATTERNS AND LOCATIONS OF FINISHES.
2. MULTIPLE WALL FINISHES ARE USED IN THIS SPACE; SEE INTERIOR ELEVATIONS FOR PATTERNS AND LOCATIONS OF FINISHES (INCLUDING REVEALS WHERE APPLICABLE).
3. MULTIPLE CEILING FINISHES ARE USED IN THIS SPACE; SEE REFLECTED CEILING PLANS FOR PATTERNS AND LOCATIONS OF FINISHES.
4. THIS SPACE CONTAINS FINISHED MILLWORK; SEE INTERIOR ELEVATIONS AND MILLWORK DETAILS FOR WOOD FINISHES.
5. THERE ARE MULTIPLE TYPES OF FLOOR FINISHES AND RAILING TYPES AT SPANNING BRIDGE INCLUDING STRUCTURAL GLASS FLOORING AND LAMINATED GLASS RAILINGS; SEE INTERIOR ELEVATIONS AND FINISH FLOOR PLANS FOR LOCATIONS OF EACH.
6. PROVIDE PLEXIGLASS WALL COVERING TO A HEIGHT OF 4'-0" AFF AND HORIZONTALLY 4'-0" FROM THE EDGE OF THE NEAREST WATER SOURCE.
7. A PORTION OF THE CEILING IS STOREFRONT SYSTEM WITH TRANSLUCENT GLAZING; RE: WINDOW SCHEDULE AND ELEVATIONS.
8. PRESS BRIEFING ROOM HAS AN ELEVATED PRESENTATION STAGE AND PODIUM; SEE INTERIOR ELEVATIONS; WOOD FINISHES ARE TO MATCH WD-11.
9. MULTIPLE CEILING HEIGHTS EXIST IN THIS SPACE; SEE REFLECTED CEILING PLANS FOR HEIGHTS.
10. FLOOR LEVEL SLOPES DUE TO RAMP; CEILING HEIGHT IS MEASURED FROM FIRST FLOOR ELEVATION.
11. THIS SPACE CONTAINS POWDER COATED STEEL CASEWORK BY MOTT INDUSTRIES OR EQUAL; SEE INTERIOR ELEVATIONS; PROVIDE STAINLESS STEEL COUNTERTOPS.
12. NORTH WALL OF VESTIBULE SHALL BE EXPOSED CMU; PAINT TO MATCH ADJACENT GYPSUM BOARD.
13. PROVIDE EMBEDDED ALUMINUM STAIR NOSING BY BALCO OR EQUAL; TYPE T-213 IN 2 INCH WIDTH WITH TYPE 6 CAST-IN ANCHOR.
14. ALL EXPOSED STRUCTURE AT CEILING IS TO BE PAINTED.
15. SMOOTH, HARD, NONABSORBENT SURFACE NOT REQUIRED IN THIS RESTROOM AT SERVICE SINKS, URINALS, AND WATER CLOSETS PER IBC 2012, 1210.2.2, EXCEPTION #2.
16. SMOOTH, HARD, NONABSORBENT SURFACE REQUIRED AT ALL WALLS AND PARTITIONS WITHIN 2 FEET OF SERVICE SINKS, URINALS, AND WATER CLOSETS TO A HEIGHT NOT LESS THAN 48 INCHES ABOVE FLOOR PER IBC 2012, 1210.2.2.
17. SMOOTH, HARD, NONABSORBENT SURFACE REQUIRED AT ALL SHOWER COMPARTMENTS TO A HEIGHT NOT LESS THAN 70 INCHES ABOVE DRAIN INLET PER IBC 2012, 1210.3.
18. PROVIDE STAINLESS STEEL, SLIP-RESISTANT STAIR NOSING 'TREP-E' BY SCHLUTER OR EQUAL; NOSING HEIGHT AT FINISH FLOOR EDGE IS TO BE 2MM (5/32") FOR ABUTMENT TO ADJACENT RUBBER FLOORING; SET NOSING IN A CONTINUOUS BED OF STRUCTURAL EPOXY ADHESIVE; PROVIDE END CAP ACCESSORIES AS REQUIRED; TYPICAL AT CAST-IN-PLACE CONCRETE PORTIONS OF STAIR A WITHIN THE POLICE LOBBY.
19. STEEL FLOOR GRATING IN THIS SPACE SERVES AS PART OF THE SMOKE EVACUATION SYSTEM; SEE BUILDING SECTIONS AND STRUCTURAL DRAWINGS FOR ADDITIONAL INFORMATION.
20. SEE INTERIOR ELEVATIONS FOR SURFACE MOUNTED MIRROR LOCATIONS.
21. LIGHT FIXTURES IN STAIR B ARE TO BE RECESSED LINEAR FIXTURES MOUNTED INTO THE SIDE WALLS; SEE INTERIOR ELEVATIONS AND ELECTRICAL DRAWINGS FOR ADDITIONAL INFORMATION.
22. THE EAST END OF THIS SPACE SERVES AS PART OF THE SMOKE EVACUATION SYSTEM; SEE INTERIOR ELEVATIONS AND REFLECTED CEILING PLANS FOR ADDITIONAL INFORMATION AND VENT LOCATIONS.
23. THE PERFORATED METAL CEILING SYSTEM IN THIS SPACE SERVES AS PART OF THE SMOKE EVACUATION SYSTEM; SEE INTERIOR ELEVATIONS AND REFLECTED CEILING PLANS FOR ADDITIONAL INFORMATION AND VENT LOCATIONS.

STRUCTURAL NOTES

THE STRUCTURAL NOTES DEFINE GENERAL DESIGN AND MATERIAL REQUIREMENTS AND ARE INTENDED TO SUPPLEMENT, BUT NOT REPLACE, THE PROJECT SPECIFICATIONS

DESIGN CRITERIA

1. Building Code: 2012 International Building Code and ASCE 7-10 (except Chapter 14 and Appendix 11A)

   1.1. Building Occupancy Category: IV

2. Design Loads

   2.1. Uniform Floor Live Loads (reduced per Building Code, UNO)

Partitions	15 psf	(except when live load > 80 psf)
Offices	50 psf	
Corridors/Lobbies 1st	100 psf	
Corridors/Lobbies 2nd floor and up	80 psf	
Exercise Room	100 psf	
Rooms with Access Floor	100 psf	
Garages (passenger vehicles)	40 psf	
Stairs	100 psf	
Storage	125 psf	
Mass Storage	250 psf	
Penthouse Mechanical	200 psf	

   2.2. Concentrated Floor Live Loads (distributed over 2.5 ft x 2.5 ft, UNO)

Office Buildings	2,000 lbs

   2.3. Roof Loads

2.3.1. Uniform Roof Live Load (reduced per Building Code)	20 psf
Concentrated Roof Live Load	300 lbs

   2.4. Wind Loads: Basic Wind Speed V (ult) = 140 mph; V (asd) = 109 mph
   Wind Exposure B
   Internal Pressure Coefficient = +/-0.18 (Enclosed Building)
   Directionality Factor, Kd = 0.85

   2.4.1. Component and Cladding Pressures (psf)
   2.4.2. Note: Positive Pressures act Toward the Surface; Negative Away.
   Note: Values based on Ultimate Wind Speed, for ASD use Applicable Load Combinations or multiply by 0.6.
   Note: Values based on Kd= 0.85

a = 7 ft	Roof C&C Pressures With Parapets (psf)					
Eff. Area (sq. ft.)	1-10	20	50	100	200	500-1000
Zone 1	+20 / -49	+19 / -48	+17 / -46	+16 / -45	+16 / -45	+16 / -45
Zone 2	+45 / -82	+43 / -73	+40 / -62	+38 / -53	+36 / -53	+34 / -53
Zone 3	+45 / -82	+43 / -73	+40 / -62	+38 / -53	+36 / -53	+34 / -53
a = 7 ft	Roof C&C Pressures With Overhangs (psf)					
Eff. Area (sq. ft.)	1-10	20	50	100	200	500-1000

Zone 2	+20 / -78	+19 / -77	+17 / -75	+16 / -74	+16 / -65	+16 / -53
Zone 3	+20 / -123	+19 / -98	+17 / -65	+16 / -41	+16 / -41	+16 / -41
a = 7 ft	Wall C&C Pressures (psf)					
Eff. Area (sq. ft.)	1-10	20	50	100	200	500-1000
Zone 4	+45 / -48	+43 / -46	+40 / -44	+38 / -42	+36 / -40	+34 / -37
Zone 5	+45 / -60	+43 / -56	+40 / -50	+38 / -46	+36 / -42	+34 / -37
a = 7 ft	Parapet C&C Pressures (psf)					
Eff. Area (sq. ft.)	1-10	20	50	100	200	500-1000
Zone 4	+117 / -82	+106 / -78	+91 / -72	+80 / -68	+78 / -64	+75 / -58
Zone 5	+117 / -94	+106 / -87	+91 / -79	+80 / -73	+78 / -67	+75 / -58

   2.5. Earthquake Loads:
   Seismic Importance Factor, I = 1.50
   Mapped Spectral Response Accelerations, Ss and S1 = 0.119 and 0.068
   Site Class: D
   Spectral Response Coefficients, Sds and Sd1 = 0.127 and 0.109
   Seismic Design Category: C
   Analysis Procedure: Equivalent Lateral Force Procedure
   Slab-on-grade is not designed as a structural diaphragm.

3. Structural Engineer is not responsible for the design of steel stairs, handrails, curtain wall/window wall systems, cold-formed teel framing, or other systems not shown in the Structural Documents. Such systems shall be designed, furnished, and installed as required by other portions of the Construction Documents.

4. Steel floor and roof assemblies and individual beams shall be considered "Restrained" (ASTM E119, Standard Test Methods for Fire Tests of Building Construction and Materials) for determining fireproofing thickness.

5. No explicit provisions have been made for future building expansion.

GENERAL

1. Reference to standards or specifications of technical societies, organizations, or associations means the standard or specification referenced by the governing Building Code shown on the Drawings, unless specifically noted otherwise.
2. Material, workmanship, and design shall conform to the referenced Building Code.
3. For dimensions not shown in the Structural Drawings, see the Architectural Drawings.
4. Contractor responsibilities include, but are not limited to, the following:
   4.1 Coordinate the Structural Documents with the Architectural, Mechanical, Electrical, Plumbing, and Civil Documents. Architect/Structural Engineer shall be notified of any discrepancy or omission.
   4.2 Coordinate Structural Documents with Architectural and MPE Documents for location and quantity of miscellaneous framing for items such as roof drains, suspended or supported mechanical units, etc. Refer to Architectural and MPE Documents for additional miscellaneous structural elements that may not appear in the Structural Documents.
   4.3 Equipment/Framing Verification
      4.3.1 Mechanical Equipment: Submit actual weights of equipment to be used for review at least 3 weeks prior to fabrication and construction. Coordinate opening sizes and locations with Mechanical Contractor.
      4.3.2 Elevator Loads: Submit elevator shop drawings and loads (machine beam/slab, and guide rails) for review prior to detailing, fabrication and installation of elevator system.
      4.3.3 Miscellaneous Framing: Verify framing shown on the Structural Drawings for mechanical equipment, Owner-furnished items, partitions, etc. is consistent with the requirements of such items.
   4.4 The structure is stable only in its completed form. Temporary supports required for stability during all intermediate stages of construction shall be designed, furnished, and installed by the Contractor.
   4.5 Contractor has sole responsibility for jobsite safety and complying with all health and safety precautions as required by any regulatory agency. In performing construction observation visits to the jobsite, the Structural Engineer will have no control over, nor responsibility for, the Contractor's means, methods, sequences, techniques, or Procedures in performing the work.
5. Existing and Unforeseen Conditions
   5.1 Contractor shall field verify all existing conditions, elevations, and site conditions prior to construction and fabrication. Contractor shall immediately notify Structural Engineer of any existing conditions that are in conflict with the Structural Documents.
   5.2 Shop drawing submittals shall be based on field verified dimensions and conditions only. Contractor shall clearly show actual field dimensions on shop drawings.
   5.3 Existing dimensions, elevations, and other information shown in the Structural Drawings are based on the following Documents:

SUBMITTALS

1. Shop Drawings and Submittals
   1.1 Reproduction of Structural Drawings for shop drawings is not permitted.
   1.2 Electronic drawing files will not be provided to the Contractor.
2. Submittals
   2.1 The Structural Quality Assurance Plan and Specifications identify the required submittals. Prior to (or with) the first submittal, Contractor shall submit a list of all required submittals for Engineer's review.
3. Deferred Submittals
   3.1 Deferred Submittals include those portions of the project that are furnished by the Contractor and designed by someone other than the Engineer of Record and are submitted at the time of the application. Deferred Submittals shall be submitted to the Building Official prior to fabrication and installation.
   3.2 Submittal documents for Deferred Submittals:
      3.2.1 Shall be included in the Contractor's scope of services and shall be sealed by an Engineer licensed in the project state. Design of Deferred Submittals shall be in accordance with the governing Building Code indicated above.
      3.2.2 Shall be submitted to the registered design professional in responsible charge who shall review them and forward to the Building Official with a notation indicating the deferred submittal documents have been reviewed and that they have been found in general conformance with the design of the building. Deferred submittal items shall not be installed until the design and submittal documents have been approved by the Building Official.
   3.3 The following shall be considered Deferred Submittals:
      Temporary/Permanent Shoring and Underpinning
      Aggregate Pier Soil Reinforcement
      Steel Connections - See "Structural Steel" Section
      Steel Joists
      Cold-Formed Exterior Steel Stud Framing
      Architectural Precast Concrete
      Steel Stairs and Handrails
      Curtainwall/Window Wall Systems
      Elevators
      Structural Glass Floor

FOUNDATION

1. Geotechnical Report: Public Safety Complex Police and Court Building
   Prepared by: Terracon Consultants, Inc.
   Dated: July 1, 2016
   Report No. EB165058
2. Building Pad Preparation
   2.1 Strip vegetation and topsoil.
   2.2 Proofroll building areas with a minimum of two complete coverages of a loaded dump-truck or scraper in each of two perpendicular directions. Replace soft areas with compacted structural fill.
   2.3 Ground improvement shall be Aggregate Pier Soil Reinforcement.
      2.3.1 Minimum Improved Soil Bearing Capacity:

Isolated Footings	As indicated on Foundation Plans by (#,### psf) at each footing
Retaining wall Footings	3000 psf
Mat footing at Elevator Pit	As indicated on Foundation Plans
Slab-on-Grade	Not Required
Turndown at Slab Edge	3000 psf

      2.3.2 Improved soil settlement limits:

Total	1"
Differential	1/2"

REINFORCEMENT

1. Reinforcing Bars: ASTM A615, Grade 60
   1.1 Reinforcing bars are not to be welded.
2. Welded Wire Reinforcement (WWR) : ASTM A1064, 8" minimum side and end laps
3. Reinforcement Placement (UNO)
   3.1 Concrete Reinforcement Cover

Below Grade:	Unformed	3" clear
	Formed	2" clear
Walls		3/4" clear
Slabs		3/4" clear

   3.2 Masonry reinforcing steel: Place in the center of CMU cells.
4. Reinforcement Splices
   4.1 Reinforcement marked "Continuous" can be spliced at locations determined by Contractor. All other reinforcement shall be spliced only at locations shown or noted, unless approved in writing by Structural Engineer.
   4.2 Splice Lengths (UNO)
   Concrete Reinforcement: Class B Tension Lap
   Masonry Reinforcement: #4 - 24" / #5 - 30" / #6 - 48" / #7 - 60"

CAST-IN-PLACE CONCRETE

1. Concrete Properties

	28-Day, f'c (min.)	w/cm Ratio (max.)	Entrained Air
Footings (Isolated / Continuous)	3,000 psi	----	None Required
Foundation Walls, Pedestals	3,000 psi	----	None Required
Slabs on Grade	3,500 psi	0.48	None Required
Slabs on Composite Steel Deck	3,500 psi	0.48	None Required
Walls	3,000 psi	0.50	None Required
Raised floor and Ribs on Polystyrene	3,500 psi	0.48	None Required
Mechanical Equipment Pads	3,000 psi	----	None Required
All Other Concrete	4,000 psi	0.40	5.0 +/- 1.5%

   Note: All concrete shall be assigned the exposure classes FO, SO, PO, and CO; except concrete in Aggressive Environment shall be assigned the exposure classes F3, SO, P1, and C2 (see ACI 318) .
2. Construction Joint Locations: No horizontal construction joints are permitted except as shown on the Structural Drawings. Obtainteel written consent for additional joints.
3. Pipes or ducts shall not exceed one-third the slab or wall thickness unless specifically detailed. See mechanical and electricalteel drawings for location of sleeves, accessories, etc.
   3.1 Conduit shall not be placed within the slab on grade. Conduit shall be installed below the slab on grade within the granular subbase.
   3.2 It is preferred that conduit not be installed within composite slabs. However, if a limited quantity of conduit must be installed within the composite slab, the conduit outside diameter shall not exceed 1", no crossover can occur, and conduit runs shall be spaced at 18" with a minimum of 3/4" cover. Where possible, conduit should be installed within the low flutes of the composite deck.
4. Concrete floors supported by composite steel deck are to be finished level. The weight of the wet concrete will cause deflectionteel of the steel framing.
   4.1 Concrete overruns of at least 15% should be anticipated and included in the Contractor's Bid.
5. Special Finishes: Refer to Architectural Drawings for molds, grooves, ornaments, clips or grounds required to be encased in concrete and for location of floor finishes and slab depressions.
6. Defect Repair: Honey-combing, spalls, cracks, etc. shall be repaired. Extent of defective area to be determined by the Structura Engineer.

STRUCTURAL NOTES

THE STRUCTURAL NOTES DEFINE GENERAL DESIGN AND MATERIAL REQUIREMENTS AND ARE INTENDED TO SUPPLEMENT, BUT NOT REPLACE, THE PROJECT SPECIFICATIONS

NON-SHRINK GROUTING

1. Non-shrink grout under steel base plates shall be non-metallic with minimum compressive strength of 5000 psi at 28 days.
2. Non-shrink grout used for patching, repair, and other specific applications shall be submitted for review and approval by engineer.

CONCRETE MASONRY

1. CMU Minimum Compressive Strength, f'm = 2,000 psi.
2. Mortar: Walls below grade Type M
   Bearing walls Type M or S
   Partition walls Type N
3. Coarse Grout: 2,500 psi min. compressive strength conforming to ASTM C476.
   3.1 Grout solid bond beams, reinforced CMU cores, and CMU cores and wall cavities below grade.
   3.2 Masonry webs on each side of grouted cells shall be fully mortared. Exterior single wythe CMU walls shall have head joints fully mortared.
4. Horizontal Joint Reinforcement: Two (2) No. 9 gage longitudinal wires at 16" vertically, UNO. Lap wire 6 inches minimum. Provide accessories for corners, intersections, etc. Use ladder type for walls with vertical reinforcing.
5. Provide open bottom beam block units with 3" deep minimum web openings at horizontal reinforcement locations not located over an opening. A minimum clear space of one bar diameter shall be provided between the reinforcing bars and the face of masonry units.
6. CMU has been designed assuming "running bond" placement. Do not use "stack bond" unless approved by Structural Engineer.
7. Contraction Joints: Unless noted otherwise on the Plans, maximum spacing of 1 1/2 times of wall height or 24 feet (whichever is less) in all concrete masonry walls (including partitions) above grade.
8. Dovetail Anchors: At 16" vert., UNO, where CMU walls abut concrete surfaces.
9. Submit written construction procedures prior to the start of masonry construction.

STRUCTURAL STEEL

1. Steel Shapes
   1.1 W-Shapes: ASTM A992 (Grade 50)
   1.2 Angles, Channels, Plates, UNO: ASTM A36
   1.3 Square/Rectangular/Round Hollow Structural Sections (HSS) : ASTM A500
   1.4 Pipe Structural Sections: ASTM A53, Grade B
   1.5 Structural steel exposed to weather shall be galvanized
2. Anchor Rods, Bolts, and Studs
   2.1 Anchor Rods: ASTM F1554, Grade 36. Headed Rods or threaded rods with plate washer and heavy hex nut.
   2.2 Bolts: 3/4" Diameter A325 minimum. All connections may be bearing type, UNO. Design bearing type connections for load values with threads included in the shear plane. Submit proposed bolt tightening procedure for review.
   2.3 The following connections are slip-critical:
   Shear connection in welded moment connections (Moment Frames, etc.)
   Hanger connections
   Any field modified connection
   Connections indicated as slip-critical (SC)
   2.4 Shear Connectors (for Composite Beams) : ASTM A108. 3/4" Diameter, headed
   Length (In-Place After Burn-off) : 3-3/4" (+/- 1/4")
   2.5 Headed Studs: ASTM A108. See Details for Diameter, Length and Spacing. Length given is in-place length after burn-off.
3. Structural steel shall be fabricated and erected according to the "Specification for Structural Steel Buildings" dated June 22, 010 and the AISC "Code of Standard Practice for Steel Buildings and Bridges" Dated April 14, 2010.
4. Connections shall be detailed based on the design information provided in the Structural Documents.
   4.1 Standard Shear Connections: Detail as bolted or welded double-angle, single-plate, single-angle, or tee connections in accordance with the connection tables in the "Manual of Steel Construction", Thirteenth Edition.
   4.1.1 Shear connections not defined in the AISC Manual shall be designed by an Engineer licensed in the project state. This design service shall be included in the Contractor's scope of services. Shop drawings of such connections shall be sealed by the Engineer.
   4.2 Welded Connections: Prequalified welded joints in accordance with AISC and the Structural Welding Code of the American Welding Society; "Non-prequalified joints" shall be qualified prior to fabrication.
   4.3 Factored Design Forces/Reactions: As shown on the Structural Drawings or, if not shown, the factored design reaction shall be half of the "Maximum Total Uniform Load (LRFD) " tabulated in the "Manual of Steel Construction", Thirteenth Edition.
   4.4 Steel connections not specifically detailed in the Structural Drawings shall be designed by the Contractor. This design service shall be included in the Contractor's scope of services. Shop drawings of such connections shall be sealed by an Engineer licensed in the project state.
5. Shop Drawings: Submittal shall adequately depict structural members and connections.
6. Steel Bar Grating: Rectangular type with welded cross bars
   6.1 Steel: ASTM A569
   6.2 Bearing Bars: 1-1/4" deep x 3/16" thick spaced at 1-3/16"
   Cross Bars: Spaced at 4"
   6.3 Grating Surface: Plain
   6.4 Grating Finish: Standard shop coat of red oxide paint
   6.5 Fasten grating to steel supports with saddle clip and self-drilling fastener at every sixth bearing bar along support (min. of 2 clips per panel) .

POST-INSTALLED ANCHORS

1. Post-installed anchors shall only be installed where indicated on the structural drawings, unless approved in writing by engineer of record.
2. The below products are the design basis for this project. Product diameter and embedment shall be as shown in the details. Install products IN ACCORDANCE WITH MANUFACTURER'S PRINTED INSTALLATION INSTRUCTIONS (MPII) . Refer to the project building code and/or evaluation report for special inspections and proof load requirements. Substitution requests for products other than those listed below may be submitted by the contractor to the Engineer-of-Record (EOR) for review. Substitutions will only be considered for products having a research report recognizing the product for the appropriate application under the project building code. Substitution requests shall include calculations that demonstrate the substituted product is capable of achieving the equivalent performance values of the design basis product.
3. For Anchoring into Concrete
   3.1 Expansion Anchors: Hilti Kwik Bolt TZ (ICC-ES ESR-1917) , Simpson Strong-Bolt 2 (ICC-ES ESR-3037) , or Power-Stud+ SD2 (ICC-ES ESR-2502) . Minimum embedment = 6 times anchor diameter, UNO.
   3.2 Screw Anchors: Simpson Titen-HD (Concrete: ICC-ES ESR-2713; Grouted Masonry: ICC-ES ESR-1056) or Powers Wedge-Bolt+ (ICC-ES ESR-2526) Hilti Kwik HUS-EZ (ICC-ES ESR-3027) .Minimum Embedment=6 times anchor diameter, UNO.
4. For Anchorage into Solid Grouted Concrete Masonry
   4.1 Expansion Anchors: Hilti Kwik Bolt 3 (ICC-ES ESR-1385) , Simpson Strong-Bolt 2 (IAPMO-UES ER-240) , Simpson Wedge-All (ICC-ES ESR-1396) or Power-Stud+ SD1 (ICC-ES ESR-2966) . Minimum embedment = 6 times anchor diameter, UNO.
   4.2 Screw Anchors: Simpson Titen-HD (ICC-ES ESR-1056) or Powers Wedge-Bolt+ (ICC-ES ESR-1678) , Hilti Kwik HUS-EZ (ICC-ES ESR-3056) .Minimum Embedment=6 times anchor diameter, UNO.
   4.3 Adhesive Anchors: Adhesive conforming to Simpson Set-XP (IAPMO-UES ER-281) , Simpson SET-XP (ICC-ES ESR-265) , Powers PE1000+ Epoxy Adhesive (ICC-ES ESR-2583) , Powers AC100+ Gold Adhesive (ICC-ES ESR-2582) , Hilti HIT-HY 70 Fast Cure Adhesive (ICC-ES ESR-2682) . Minimum Embedment = 6 times anchor diameter, UNO.
5. Contractor shall arrange for an anchor manufacturer's representative to provide onsite installation training for all of their anchoring products specified. The structural Engineer of record must receive documented confirmation that all of the contractor's personnel who install anchors are trained prior to the commencement of anchor installation.

STEEL JOISTS

1. Steel Joists, Bridging, and Connections: Designed, fabricated, and erected according to Specifications of the Steel Joist Institte (SJI) .
   1.1. Net Uniform Uplift Design Load for Roof Joists = 15 psf
   1.2. Bridging shall be designed to fully brace top chord of joists under service loads for roof joists not braced by steel roof deck.te
   1.3. Top chord extensions or extended ends are to be designed for the same tabulated uniform loads used in the design of the associated joists plus a concentrated load of 300 pounds at the end of the of the extension or extended end, unless noted otherwise on the Drawings.
2. Design of steel joists, bridging, and their connections shall be the sole responsibility of the Contractor. Submit shop drawingste sealed by an Engineer licensed in the project state.
3. Contractor shall coordinate the construction and erection of walls, beam framing, Steel decking, etc. to ensure compatibility ofte roof and wall systems considering pitch and camber of steel joists.

STEEL DECK

1. Composite Steel Deck
   1.1 Composite steel deck shall have the following minimum properties:
   Section Modulus: Positive, Sp = 0.340 in^3
   Negative, Sn = .340 in^3
   Moment of Inertia, I = 0.280 in^4
   Material Yield Strength = 50 ksi
   1.1.1 In no case shall the deck thickness be less than 20 gage regardless of the deck properties provided.
   1.1.2 Deck properties shown above are based on the analysis of two- and three-span deck conditions. The maximum single span of composite deck shall not exceed 7 feet.
   1.2 Composite floor members are designed to be unshored unless noted otherwise.
   1.3 Coordinate embedded items required for Architectural, Structural, and Mechanical elements.
2. Steel Roof Deck: 22 gage, galvanized
3. Submit shop drawings with the manufacturer's catalog demonstrating compliance with the Contract Documents and the Steel Deck Institute.

COLD-FORMED EXTERIOR STEEL STUD FRAMING

1. Design of cold-formed exterior steel non-load bearing studs and their connections shall be the sole responsibility of the Contractor. Design and shop drawing submittals shall comply with the Specifications. Shop drawings shall be sealed by an Engineer licensed in the Project state.
2. Cold-Formed Steel Design, Fabrication and Erection: Conform to AISI S100-07, "North American Specification for Design of Cold-Formed Steel Structural Members".

ELEVATORS

1. Elevator hoistway dimensions, pit depths, sheave beam layout, machine room slabs, hoist beams, and elevator reactions are based on preliminary elevator information only. Final elevator shop drawings were not available during preparation of the Construction Documents.
2. Contractor shall submit final elevator shop drawings to the engineer and architect for review. Elevator shop drawings shall indicate the loads for the machines, counterweights, car buffers, counterweight buffers, and guide rails. Their connections to te structure shall be clearly depicted for verification of the load carrying capacity of the structure.
3. Contractor shall not begin construction or fabrication of any structural elements related to the elevators until final elevator hop drawings have been submitted, reviewed by the Engineer and Architect for coordination purposes, and approved by the Engineer and Architect. These items include elevator pit walls and foundations, separator beams, guide rail support tubes, hoisthop beams, machine room framing, and sheave beams.
4. Where required, Contractor shall coordinate the number and location of elevator guide rail support tubes for elevator guide rail and counterweight rails with the final elevator shop drawings. Miscellaneous steel required to connect elevator guide and counterweight rails to guide rail support tubes shall be furnished by the elevator vendor or contractor.
5. Miscellaneous steel required to support elevator door frames shall be furnished by the elevator vendor or contractor.
6. Elevator Seismic Design and Submittals
   6.1 Design, construction, and installation of elevator systems shall comply with the requirements of the referenced Building Code and ASME A17.1. In case of conflict, the more restrictive requirements shall govern.
   6.2 Elevator cab guide rails and supporting brackets shall be designed to resist the lateral forces specified in the above referenced documents. The lateral forces shall be based on the maximum weight of the car, including one-half the weight of the plunger, plus not less than 40 percent of the rated load capacity of the car. The most critical locations of the lateral forces shall be considered for the design of the elevator cab guide rails. The maximum guide rail deflection shall not exceed 1/2 inches for the design lateral loads. Additional guide rail brackets may be used, if necessary, to reduce the guide rail deflection (tube member supports have been provided at all elevator shafts for this purpose) .
   6.3 Upper and lower position restraints shall be provided as required by the above referenced documents.
   6.4 Structural drawings and engineering calculations of the elevator guide rails, supporting brackets, and all connections shall be stamped and signed by a licensed structural engineer in the project state and submitted to the Structural Engineer of Record.

ANCHORAGE OF MECHANICAL COMPONENTS

1. Roof Top Structures and Equipment
   1.1. Rooftop structures and equipment shall be properly anchored and braced to resist wind and seismic forces. Refer to MPE documents for specific details and additional information.
   1.2. Design of anchorage for rooftop structures, curbs and equipment shall be the sole responsibility of the Contractor. Submit shop drawings sealed by an Engineer licensed in the project state. Shop drawings shall show plan layout, typical elevations, details, and anchorage to the structure.
   1.3. Anchorage of rooftop structures and equipment shall comply with the requirements of Factory Mutual.
2. Piping
   2.1. Pipe loads supported by "C" clamps at the edge of structural steel beam flanges cannot exceed 500 pounds.
   2.2. Total load of mechanical components applied to any one structural steel beam is not to exceed 4000 pounds unless specifically approved by the Structural Engineer.
   2.3. At composite slabs, piping up to and including 6" diameter may be supported by the composite slab. Piping greater than 6" diameter is to be supported from the structural steel beams or supplementary steel supports.
   2.4. At roof decks, piping is to be supported from the structural steel beams or supplementary steel supports, not supported by the roof deck.

STRUCTURAL QUALITY ASSURANCE PLAN

GENERAL

This Structural Quality Assurance Plan includes:

1. The Statement of Special Inspections which defines the scope of testing and inspection that is required for this project.
2. The responsibilities of the Contractor.

Refer to other portions of the Construction Documents for Special Inspections required of architectural, mechanical, electrical,or other building components.

Special Inspector will be hired by the Owner.

Special Inspector shall maintain records of inspections in accordance with Chapter 17 of the Building Code and shall distribute hese records to the Building Official, Architect, and Structural Engineer on a weekly basis, unless noted otherwise below. Reports shll indicate that work inspected/tested was done in conformance to the Construction Documents. Discrepancies shall be brought to the immediat attention of the Contractor for correction. If the discrepancies are not corrected, they shall be brought to the attention of th Building Official, Architect, and Structural Engineer prior to completion of that phase of the work.

At the conclusion of the project, the Special Inspector shall submit a final report documenting required special inspections andcorrection of any discrepancies noted in the inspections.

STATEMENT OF SPECIAL INSPECTIONS

Special Inspector shall perform the following tests and inspections of all structural elements included within this Statement ofSpecial Inspections.

1. The following elements are part of the Seismic-Force-Resisting （SFR） System. and require additional Special Inspections or Testig for Seismic Resistance:
   a. Moment Frames and their Foundations
   b. Braced Frames and their Foundations
   c. Special Moment Frames and their Foundations
   d. Special Structural Walls, their Foundations, and associated Coupling Beams
   e. Shearwalls and their Foundations
   f. Floor and Roof Diaphragms
2. The followings elements are part of the Main Wind-Force-Resisting （MWFR） System and require additional Special Inspections for Wind Resistance:
   a. Moment Frames and their Foundations
   b. Floor and Roof Diaphragms, including Collectors, Drag Struts, and Boundary Elements
   c. Roof Cladding and Fastening Connections
3. The following tables contain material, components and work that require special inspection or testing:
   a. Inspection Frequency, C - Continuous special inspection. Special inspection by the special inspector who is present when and where the work to be inspected is being performed.
   b. Inspection Frequency, P - Periodic special inspection. Special inspection by the special inspector who is intermittently presen where the work to be inspected has been or is being performed. For structural steel observe the items on a random basis.
   c. See Steel section for additional information for inspection tasks.

SOILS	Inspection Frequency		Remarks
1. Verify materials below shallow foundations are adequate to achieve to design bearing capacity.	-	P	-
2. Verify excavations are extended to proper depth and have reached proper material.	-	P	Inspection is required after excavation is complete and prior to placement of structural fills.
3. Perform classification and testing of controlled fill materials.	-	P	Perform laboratory tests of field samples provided by contractor for verification of in place densities.
4. Verify use of proper materials, densities, and lift thickness during placement and compaction of controlled fill. a. As a minimum, perform one test per lift for every 2500 square feet of fill placed.	C	-	Refer to specification for lift thicknesses and compaction.
5. Prior to placement of controlled fill, observe subgrade and verify that the site has been prepared properly （e.g. proofrolling, etc.） .	-	P	-

AGGREGATE PIER SOIL REINFORCEMENT	Inspection Frequency		Remarks
1. Observe the installation of all aggregate piers maintaining complete and accurate records of each pier.	C	-	Record unusual conditions encountered during installation.
2. Verify placement location and plumbness, confirm pier lengths and drilled diameters.	C	-	-
3. Verify compliance of approved equipment, method, and materials to be used in installing the aggregate piers.	-	P	-
4. Verify performance of modulus test （s） .	-	P	-

CONCRETE CONSTRUCTION	Inspection Frequency		Remarks
1. Inspection of reinforcing steel placement and installation. Grade, size, quantity, quality, location, spacing, clearances.	-	P	ACI 318: 3.5, 7.1 - 7.7 / IBC 1910.4
2. Inspection of reinforcing steel welding: a. Verify weldability of reinforcing steel other than ASTM A 706 b. Reinforcing steel resisting flexural and axial forces in intermediate and special moment frames, and boundary elements of special structural walls of concrete and shear reinforcement. c. Shear reinforcement. d. Other reinforcement.	- C C -	P - - P	ACI 318: 3.5.2 / AWS D1.4 / IBC Table 1705.2.2
3. Inspection of anchors cast in concrete. Verify compliance of the following: diameter, grade, type, length, number, placement, and embedment depth.	C	-	ACI 318: 1.3.2, 8.1.3, 21.1.8 / IBC 1908.5, 1909.1, AISC 360-10 N5.7
4. Inspection of post-installed mechanical anchors installed in hardened concrete members: verify anchor type, anchor dimensions, hole diameter and cleaning procedures, anchor spacing, edge distances, concrete minimum thickness, anchor embedment and tightening torque.	C	-	ACI 318: 3.8.6, 8.1.3, 21.1.8 / IBC 1909.1 Use of post installed anchors must be approved by Structural Engineer
5. Inspection of post-installed adhesive anchors and reinforcing steel installed in hardened concrete members: Verify adhesive type, anchor rod dimensions, hole diameter and cleaning procedures, anchor spacing, edge distances, concrete minimum thickness, anchor embedment and tightening toque.	C	-	ACI App. D9.2.4
6. Verify use of required design mix.	-	P	ACI 318: Ch. 4, 5.2 - 5.4, IBC 1904.2, 1910.2, 1910.3
7. Sampling fresh concrete from concrete discharge. Mold one set of specimens for compressive strength testing for each 150 cubic yards or each 5,000 square feet of slab or wall surface area for each mix design placed in any one day. No fewer than five tests for a given class of concrete for the entire project. a. Mold （5） 4x8-inch compressive strength cylinders, break and report （1） at 7-days, （3） at 28-days, or mold （4） 6x12-inch compressive strength cylinders, break and report （1） at 7-days, （2） at 28-days. b. Remaining specimen （s） shall be broken as directed by the Structural Engineer if compressive strengths do not appear adequate. c. For each set molded, record: i. Slump ii. Air Content iii. Unit Weight iv. Temperature, ambient and concrete v. Batch and discharge times vi. Location and placement vii. Any pertinent information, such as addition of water, addition of admixtures, etc. d. Verify compliance with construction documents	C	-	ACI 318: 5.6, 5.8 ACI （5.a, 5b.i, ii, iii, iv, v, vi） , SDG （5b.vii, 5.c, 5.d) ASTM C 172, ASTM C 31 ACI 318: 5.6.1 Report in writing on the same day as tests are performed. Reports of compressive strength tests shall contain the project identification name and number, date of concrete placement, name of concrete testing agency, concrete design compressive strength, location of concrete placement in structure, concrete mix proportions and materials, compressive breaking strength and type of break.
8. Inspection of concrete conveying and placement for proper application techniques.	C	-	ACI 318: 5.9, 5.10
9. Inspection for maintenance of specified curing temperature and techniques.	-	P	ACI 318: 5.11 - 5.13
10. Erection of Precast concrete members.	-	P	ACI 318: Ch. 16
11. Inspection of formwork for shape, location, and dimensions of the concrete member being formed.	-	P	ACI 318: 6.1.1
12. Perform testing of floor Flatness and Levelness of concrete slab placements in accordance with ASTM E1155. See specification	-	P	ACI 117-10

NON-SHRINK GROUTING	Inspection Frequency		Remarks
1. Compressive strength tests per ASTM C1107. a. Number of Tests: One test for each ten bags of grout used or minimum of one test for each day of grouting. b. Cube Size: 2-inch x 2-inch c. Test Schedule: （1） cube at 3-days, （2） cubes at 7-days, （3） cubes at 28-days.	C	-	
2. Perform one performance evaluation test prior placing grout under base plates. Test shall be performed as outlined in ACI 351.1R-99	-	P	One test shall be performed at the beginning job prior to placement of grout under base plates.

CONCRETE MASONRY	Inspection Frequency		Remarks
1. Verification of f 'm in accordance with Specification TMS 602 Article 1.4 B prior to construction AND for every 5,000 sf during construction	-	-	TMS 602 - Article 1.5
2. Verification of proportions of materials in premixed or preblended mortar and grout other than self-consolidating grout, as delivered to the project site	-	-	
3. Verification of Slump flow and Visual Stability Index （VSI） as delivered to the project site for self-consolidating grout	-	-	TMS 602 - Article 1.5 B.1.b.3
4. Verify compliance with the following approved submittals	-	-	TMS 602 - Article 1.5
a. Mortar mix designs indicating type and proportions of ingredients in compliance with the proportion specification of ASTM C270	-	P	TMS 602 - Article 2.1 and 2.6 A
b. Mortar mix designs and mortar tests performed in accordance with the property specification of ASTM C270.	-	P	TMS 602 - Article 2.1 and 2.6 A
c. Grout mix designs indicating type and proportions of the ingredients according to the proportion requirements of ASTM C476	-	P	TMS 602 - Article 2.2
d. Grout mix designs and grout strength test performed in accordance with ASTM C476	-	P	TMS 602 - Article 2.2
e. Grout compressive strength tests performed in accordance with ASTM C1019, and slump flow and Visual Stability Index （VSI） as determined by ASTM C1611/C1611M.	-	P	TMS 602 - Article 2.2
f. Construction procedures cold weather （temperature below 40°F） or hot weather （temperature above 90°F）	-	P	TMS 602 - Article 1.8 C and 1.8 D
5. Verify that the following are in compliance;	-	-	
a. Proportions of site-mixed mortar and grout	-	P	TMS 602 - Article 2.1, 2.6 A and 2.6 B
b. Grade, type, and size of reinforcement and anchor bolts	-	P	TMS 402 - Sec 1.16 TMS 602 - Article 2.4 and 3.4
c. Placement of masonry units and construction of mortar joints	-	P	TMS 602 - Article 3.3 B
d. Placement of reinforcement and connectors	C	-	TMS 402 - Sec 1.16 TMS 602 - Article 2.4 and 3.4
e. Grout space prior to grouting	C	-	TMS 602 - Article 3.2 D and 3.2 F
f. Placement of grout	C	-	TMS 602 - Article 3.5
g. Size and location of structural elements	-	P	TMS 602 - Article 3.3 F
h. Type, size, and location of anchors including other details of anchorage of masonry to structural members, frames, or other	C	-	TMS 402 - Sec 1.16.4.3 and 1.17.1
i. Preparation, construction, and protection of masonry during cold weather （temperature below 40°F） or hot weather （temperature above 90°F）	-	P	TMS 602 - Article 1.8 C and 1.8 D
6. Observe preparation of grout specimens, mortar specimens, and/or prisms	C	-	TMS 602 - Article 1.4 B.2.b.3, 1.4 B.3, 1.4 B.4

STRUCTURAL STEEL	Inspection Frequency		Remarks AWS D1.1/D1.1M References
Where the following tasks have been be performed by the fabricator's or erector's quality control program in accordance to Chapter N of AISC 360-10 it is permitted that these tasks be coordinated with the Special Inspector so that the inspection functions are performed by only one party. The Special Inspector shall review records of tasked performed by the erector's and fabricator's quality control program to verify completeness.	Obs. - Observe these items on a random basis. Operations need not be delayed pending these inspections. Perf. - Perform these tasks for each welded joint of member.		
1. Inspection of steel framing to verify compliance with details shown on the approved construction documents including member locations, bracing, stiffening application of joint details at each connection, proper fasteners, etc.	-	Obs.	AISC 360-10 N5.7
2. Review the material test reports and certifications as listed below for compliance with the construction documents. a. Main structural steel material test reports b. Anchor rods and threaded rods test reports c. Headed stud anchors - manufacturer's certifications	Perf.	-	AISC 360-10 N5.2 & N3.2
3. Visual Inspection Tasks Prior to Welding	-	-	AISC 360-10 Table N5.4-1
a. Welding procedure specifications （WPSs） available	Perf.	-	AWS D1.1/D1.1M 6.3
b. Manufacturer certifications for welding consumables available.	Perf.	-	
c. Material identification （type/grade）	-	Obs.	AWS D1.1/D1.1M 6.2
d. Welder identification system. The fabricator or erector, as applicable, shall maintain a system by which a welder who has welded a joint or member can be identified. Stamps, if used, shall be the low-stress type.	-	Obs.	AWS D1.1/D1.1M 6.4 （welder qualification) (identification system not required by AWS D1.1/D1.1M)
e. Fit-up of groove welds （including joint geometry) i. Joint preparation ii. Dimensions （alignment, root opening, root face, bevel) iii. Cleanliness （condition of steel surfaces) iv. Tacking （tack weld quality and location) f. Backing type and fit （if applicable)	-	Obs.	AWS D1.1/D1.1M 6.5.2 AWS D1.1/D1.1M 5.22 AWS D1.1/D1.1M 5.15 AWS D1.1/D1.1M 5.18 AWS D1.1/D1.1M 5.10, 5.22.1.1
g. Configuration and finish of access holes	-	Obs.	AWS D1.1/D1.1M 6.5.2, 5.17
h. Fit-up of fillet welds i. Dimensions （alignment, gaps at root) ii. Cleanliness （condition of steel surfaces) iii. Tacking （tack weld quality and location)	-	Obs.	AWS D1.1/D1.1M 5.22.1 AWS D1.1/D1.1M 5.15 AWS D1.1/D1.1M 5.18
i. Check welding equipment		Obs.	Only Required for shop Fabrication.
4. Visual Inspection Tasks During Welding	-	-	AISC 360-10 Table N5.4-2
a. Use of qualified welders	-	Obs.	AWS D1.1/D1.1M 6.4
b. Control and handling of welding consumables i. Packaging ii. Exposure control	-	Obs.	AWS D1.1/D1.1M 6.2 AWS D1.1/D1.1M 5.3.1 AWS D1.1/D1.1M 5.3.2 （for SMAW) , AWS D1.1/D1.1M 5.3.3 （for SAW)
c. No welding over cracked tack welds	-	Obs.	AWS D1.1/D1.1M 5.18
d. Environmental conditions i. Wind speed within limits ii. Precipitation and temperature	-	Obs.	AWS D1.1/D1.1M 5.12.1 AWS D1.1/D1.1M 5.12.2
e. WPS followed I. Settings on welding equipment ii. Travel speed iii. Selected welding materials iv. Shielding gas type/flow rate v. Preheat applied vi. Interpass temperature maintained （min./max.) vii. Proper position （F, V, H, OH) viii. Intermix of filler metals avoided unless approved	-	Obs.	AWS D1.1/D1.1M 6.3.3, 6.5.2, 5.5, 5.21 AWS D1.1/D1.1M 5.6, 5.7
f. Welding techniques i. Interpass and final cleaning ii. Each pass within profile limitations iii. Each pass meets quality requirements	-	Obs.	AWS D1.1/D1.1M 6.5.2, 6.5.3, 5.24 AWS D1.1/D1.1M 5.30.1

STRUCTURAL STEEL	Inspection Frequency		Remarks AWS D1.1/D1.1M References
5. Visual Inspection Tasks After Welding	-	-	AISC 360-10 Table N5.4-3
a. Welds cleaned	-	Obs.	AWS D1.1/D1.1M 5.30.1
b. Size, length and location of welds	Perf.	-	AWS D1.1/D1.1M 6.5.1
c. Welds meet visual acceptance criteria i. Crack prohibition ii. Weld/base-metal fusion iii. Crater cross section iv. Weld profiles v. Weld size vi. Undercut vii. Porosity	Perf.	-	AWS D1.1/D1.1M 6.5.3 AWS D1.1/D1.1M Table 6.1 (1) AWS D1.1/D1.1M Table 6.1 (2) AWS D1.1/D1.1M Table 6.1 (3) AWS D1.1/D1.1M Table 6.1 (4) , 5.24 AWS D1.1/D1.1M Table 6.1 (6) AWS D1.1/D1.1M Table 6.1 (7) AWS D1.1/D1.1M Table 6.1 (8)
d. Arc strikes	Perf.	-	AWS D1.1/D1.1M 5.29
e. k-area. When welding of doubler plates, continuity plates or stiffeners has been performed in the k-area, visually inspect the web k-area for cracks within 3 in. （75mm） of the weld.	Perf.		Not addressed in AWS but see AISC （1997b) . See Commentary Section A3.1c and Section J10.8.
f. Backing removed and weld tabs removed and finished, and fillet welds added （if required)	Perf.	-	AWS D1.1/D1.1M 5.10, 5.31
g. Repair activities	Perf.	-	AWS D1.1/D1.1M 6.5.3, 5.26
h. Document acceptance or rejection of welded joint or member	Perf.	-	AWS D1.1/D1.1M 6.5.4, 6.5.5
6. Nondestructive Testing （NDT） of Welded Joints	Ultrasonic testing （UT) , magnetic particle testing （MT) , penetrant testing （PT） and radiographic testing （RT) , where required, shall be performed by Special Inspector in accordance with AWS D1.1/D1.1M. . NDT of welds completed in a fabricator's shop may be performed by that fabricator when fabricator is AISC Certified or approved by the Building Official where applicable. When the fabricator performs the NDT, the Special inspection agency shall review the fabricator's NDT reports. All NDT of welds completed in the field shall be performed by the Special Inspector. Acceptance criteria shall be in accordance with AWS D1.1/D1.1M for*statically loaded* structures, unless otherwise designated in the*design drawings* or project *specifications*.		
a. UT all complete penetration grove welds subject to transversely applied tension loading in a butt, T- and corner joints in material 5/16" thick or greater.	Perf.	-	AISC 360-10 N5.5b & AISC 341-10 J6.2b
b. Thermally cut surfaces of access holes when material thickness is greater than 2" shall be tested by MT or PT. Any crack shall be deemed unacceptable.	Perf.	-	AISC 360-10 N5.5c
c. Document all NDT performed, identifying tested weld by location in the structure, piece mark and location. Concurrent to submitting NDT reports to EOR or owner submit to contractor.	Perf.	-	AISC 360-10 N5.5g
d. Review NDT test reports performed by fabricator			AISC 360-10 N7
7. Inspection Tasks Prior to Bolting		-	Perform for 10% of all Snug tight joints if task is applicable and all pretension and slip critical joints. AISC 360-10 Table N5.6-1
a. Manufacturer's certifications available for fastener materials	Perf.	-	RCSC 2.1 & 9.1
b. Fasteners marked in accordance with ASTM requirements	Perf.	-	RCSC Figure C-2.1 & 9.1 （Also See ASTM Standards)
c. Proper fasteners selected for the joint detail （grade, type, bolt length if threads are to be excluded from shear plane)	-	Obs.	RCSC 2.3.2, 2.7.2 & 9.1
d. Proper bolting procedure selected for joint detail	-	Obs.	RCSC 4, & 8
e. Connecting elements, Including the appropriate faying surface condition and hole preparation, If specified, meet applicable requirements	-	Obs.	RCSC 3, 9.4 & 9.3
f. Pre-installation verification testing by installation personnel observed and documented for fastener assemblies and methods used, not required for Snug tight bolts	-	Obs.	RCSC 7 & 9.2
g. Proper storage provided for bolts, nuts, washers and other fastener components	-	Obs.	RCSC 2.2.8 & 9.1
8. Inspection Tasks During Bolting		-	Perform for 10% of all Snug tight joints if task is applicable and all pretension and slip critical joints. Special Inspector need not be present during bolt pretensioning procedures. AISC 360-10 Table N5.6-2
a. Fastener assemblies, of suitable condition, placed in all holes and washers （if required） are positioned as required	-	Obs.	RCSC 8.1 & 9.1
b. Joint brought to the snug-tight condition prior to the pretensioning operation	-	Obs.	RCSC 8.1 & 9.1
c. Fastener component not turned by the wrench prevented from rotating	-	Obs.	RCSC 8.2 & 9.2
d. Fasteners are pretensioned in accordance with the RCSC Specification, progressing systematically from the most rigid point toward the free edges	-	Obs.	RCSC 8.2 & 9.2
9. Inspection Tasks After Bolting	-	-	AISC 360-10 Table N5.6-3
a. Document acceptance or rejection of bolted connections	Perf.		
10. Inspection of Steel Elements of Composite Construction Prior to Concrete Placement	-	-	AISC 360-10 Table N6-1
a. Placement and installation of steel headed stud anchors	-	Obs.	Visually inspect and Hammer bend test （1 per 500） .
b. Document acceptance or rejection of steel elements	-	Obs.	
c. Contour and Finish	Perf.	-	
d. Dimensional Tolerances	Perf.	-	

STEEL JOISTS	Inspection Frequency		Remarks
1. Visual inspection of bolted and welded connections.	-	P	-
2. Verify installation of bridging or braces.	-	P	-
3. Verify connections for top and bottom chords.	-	P	-
4. Verify reinforcement of members for concentrated loads.	-	P	-
5. Verify proper bearing.	-	P	-

STEEL DECK	Inspection Frequency		Remarks
1. Material verification of steel deck. a. Identification markings to conform to ASTM standards specified in the approved construction documents b. Manufacturer's certified test reports.	-	P	-
2. Verify general alignment and deck lap.	-	P	-
3. Verify welds for size and pattern.	-	P	
4. Inspection of welding at floor and roof deck	-	P	in accordance with AWS D1.3
5. Verify spacing and type of sidelap attachments.	-	P	-
6. Verify installation of deck closures.	-	P	-
7. Inspect welding operations, screw attachment, bolting, anchoring, and other fastening of components within the lateral force resisting system including shear walls, braces, diaphragms, collectors （drag struts） and hold downs.	-	P	

COLD-FORMED EXTERIOR STEEL STUDS	Inspection Frequency		Remarks
1. Verify that installation of cold-formed members complies with the Construction Documents and the approved shop drawings.	-	P	-

CONTRACTOR RESPONSIBILITIES

1. Contractor shall submit to the Building Official, Owner, and the Architect a written statement of responsibility that contains te following:
   a. Acknowledgment of awareness of the special requirements contained in the Statement of Special Inspections for the main wind- or seismic force-resisting system or a wind- or seismic-resisting component listed in the statement of special inspections.
2. Contractor shall pay for any additional structural testing/inspection required for work or materials not complying with the Consruction Documents due to negligence or nonconformance and shall pay for any additional structural testing/inspection required for his convenience.
3. Contractor is responsible to ensure that the Special Inspector is on site as required to perform all tasks required by Statementof Special Inspection. Any work that requires special inspection and is performed without the Special Inspector being present is suject to being demolished and reconstructed.
4. Contractor has the following responsibilities to the Special Inspector:
   a. Provide copy of Construction Documents to Special Inspector and latest addenda （include change orders and field orders prior to inspection of work contained therein) .
   b. Notify Special Inspector sufficiently in advance of operations to allow assignment of personnel and scheduling of tests.
   c. Cooperate with Special Inspector and provide access to work.
   d. Provide samples of materials to be tested in required quantities.
   e. Provide storage space for Special Inspector's exclusive use, such as for storing and curing concrete testing samples.
   f. Provide labor to assist Special Inspector in performing tests/inspections.
5. Contractor shall perform the following:
   a. SOILS
      i. Identify soils to be used as structural fill.
   b. DRILLED PIERS
      i. Submit reinforcing and concrete material verifications in accordance with Cast-in-Place Concrete requirements below.
   c. CAST-IN-PLACE CONCRETE
      i. Submit manufacturer's certification that reinforcing materials comply with Construction Documents.
         1. For SFR Systems, submit mill test reports for each shipment of reinforcement.
      ii. Establish concrete mix design proportions in accordance with the specifications and ACI 318, Chapter 5.
      iii. Submit manufacturer's certification that concrete materials meet the requirements of the Construction Documents.
      iv. Submit manufacturer's data for tension and compression splicers.
   d. NON-SHRINK GROUTING
      i. Submit product data sheets for non-shrink grout that shows compliance with the Construction Documents and with ASTM C1107 for fluid or flowable grouts, prior to placement of grout.
   e. CONCRETE MASONRY
      i. Submit a certification from each manufacturer or supplier stating that the following materials comply with the Construction Documents:
         1. Concrete masonry units.
         2. Mortar materials: Portland cement, hydrated lime, and aggregates.
         3. Grout materials: Portland cement and aggregates.
         4. Joint reinforcement steel.
         5. Reinforcing steel.
   f. STRUCTURAL STEEL
      i. If steel fabricator and erector are certified by the American Institute of Steel Construction （AISC） Quality Certification Program for Structural Steel Buildings submit certification.
         1. At completion of fabrication, the approved fabricator shall submit a certificate of compliance to the Building Official stating that the materials supplied and work performed by the fabricator are in accordance with the *construction documents*
         2. At completion of erection, the approved erector shall submit a certificate of compliance to the Building Official stating that the materials supplied and work performed by the erector are in accordance with the construction documents.
      ii. If fabricator or erector is not AISC certified, the fabricator and/or erector shall establish and maintain*quality control* procedures and perform inspections to ensure that their work is performed in accordance with the Section N of the Specification for Structural Steel Building, AISC 360-10 and the*construction documents.* Payment of these Quality control tests and inspections shall be by the fabricator and Erector.
         1. Make available the documents listed in AISC 360-10 N3.2 in electronic or printed form for review by the EOR of the EOR's Designee prior to fabrication or erection unless otherwise required by the contract documents to be submitted:
      iii. Provide non-destructive test （NDT） reports performed in shop by fabricator. Fabricator is responsible for cost of NDT performed in shop. Reports shall identify the tested weld by piece mark and location in the piece.
   g. POST-INSTALLED ANCHORS
      i. Contractor shall contact manufacturer's representative for product installation training. Submit a letter indicating that training has taken place.
   h. STEEL JOISTS
      i. Submit manufacturer's certificate of compliance that the steel joists comply with the Construction Documents.
   i. STEEL DECK
      i. Submit manufacturer's certificate of compliance that the supplied steel deck complies with the Construction Documents.
   j. COLD-FORMED EXTERIOR STEEL STUDS
      i. Submit manufacturer's certification that the supplied cold-formed members comply with the Construction Documents.

NOTES

1. PAD AND CURB DETAILS DEPICTED ABOVE SHALL APPLY UNLESS NOTED OTHERWISE IN THE CONTRACT DOCUMENTS. COORDINATE CURB WIDTHS AND HEIGHTS WITH THE ARCHITECTURAL AND STRUCTURAL DRAWINGS. THE HEIGHT "H" OF MECHANICAL EQUIPMENT PADS SHALL BE COORDINATED WITH THE MPE DRAWINGS.
2. THE CONTRACTOR SHALL PROVIDE CONCRETE PADS ADEQUATE FOR THE SUPPORT OF THE MPE EQUIPMENT. EXACT SIZES, LOCATIONS, HEIGHTS AND ANY SPECIAL DETAILS FOR THE PADS SHALL BE OBTAINED FROM THE VENDORS BEFORE INSTALLATION OF THE PADS. PADS SHALL BE INSTALLED IN ACCORDANCE WITH THE EQUIPMENT STANDARDS. ALL EMBEDDED ITEMS SHALL BE COORDINATED WITH THE EQUIPMENT SUPPLIER. THE PADS SHALL RECEIVE A SMOOTH TROWELED FINISH.
3. DETAIL 'A'--FOR USE UNDER ALL EQUIPMENT SUPPORTED ON SLABS-ON-GRADE. DETAIL IS ALSO APPLICABLE FOR ALL EQUIPMENT SUPPORTED ON ELEVATED STRUCTURAL SLABS
4. DETAIL 'B'--FOR USE UNDER ALL EQUIPMENT WEIGHING OVER 2000 POUNDS SUPPORTED ON SLABS-ON-GRADE.

GENERAL NOTES:

1 CONTRACTOR IS RESPONSIBLE FOR COORDINATING ALL PLUMBING AND FIRE PROTECTION INSTALLATIONS WITH OTHER TRADES SUCH AS ELECTRICAL, STRUCTURAL, HVAC, LIGHTING, CEILING CONSTRUCTION AND SUPPORTS, ETC. ANY CONFLICTS ARISING OUT OF A LACK OF CONSTRUCTION COORDINATION OR DUE TO LACK OF CONSIDERATION FOR THE NEEDS OF OTHER TRADES SHALL BE RESOLVED AT NO EXPENSE TO THE OWNER.

2 ALL PIPING SHALL BE INSTALLED IN SUCH A MANNER THAT CONFLICTS WITH AIR CONDITIONING DUCTS AND WITH CEILING LIGHTS WILL NOT OCCUR. IN SOME INSTANCES, WHERE INDICATED, PIPING SHALL BE INSTALLED WITH SLEEVES THROUGH BEAMS. CONTRACTOR SHALL BE RESPONSIBLE FOR FURNISHING THE SIZES OF SLEEVES AND THE ELEVATIONS AT WHICH OPENINGS ARE TO BE MADE PRIOR TO INSTALLATION OF STRUCTURAL MEMBERS.

3 FOR EVERY PIPE SLEEVE PENETRATING FIRE RATED WALLS AND SLABS, USE 3M OR EQUIVALENT FIRE BARRIER WRAP STRIP FS-165, 3M CAULK CP 25 AND 3M PUTTY 303, ASTM E-814, U.L. LISTED, CAPABLE OF RAPID EXPANSION WHEN EXPOSED TO HEAT. COMPLIES WITH BOCA, ICBO AND SSBC. PROVIDES 3 HOUR FIRE RATING.

4 ALL SANITARY AND STORM DRAINAGE PIPING SHALL BE INSTALLED AT 1/8" PER FOOT SLOPE UNLESS OTHERWISE NOTED. FIXTURE ARMS AND SMALL BRANCHES SHALL BE SLOPED IN ACCORDANCE WITH THE STANDARD PLUMBING CODE.

5 PROVIDE ACCESS PANELS FOR SHOCK ABSORBERS, VALVES AND CLEANOUT COVERS FOR CLEANOUT PLUGS AS SPECIFIED. EACH ITEM SHALL BE PROVIDED WITH ITS ACCESS PANEL OR COVER. ACCESS PANELS AND CLEANOUT COVERS SHALL BE EASILY ACCESSIBLE AND CONTRACTOR WILL BE RESPONSIBLE FOR LOCATING THESE ITEMS SO THAT SHOCK ABSORBER, VALVE OR CLEANOUT LIES WITHIN WALL OR CEILING IMMEDIATELY BEHIND COVER OR PANEL. CONTRACTOR SHALL COORDINATE THE LOCATION OF PANELS AND COVERS WITH OTHER TOILET ACCESSORIES AND FIXTURES AS WELL AS ARCHITECTURAL LAYOUT.

6 DURING FINAL PUNCH LIST INSPECTION, CONTRACTOR SHALL HAVE ALL CLEANOUT COVERS AND ACCESS PANELS OPENED AND ITEMS EXPOSED FOR VERIFICATION AS TO THEIR INSTALLATION BY CONTRACTING OFFICER.

7 PROVIDE AUTOMATIC RESEALS FOR ALL FLOOR DRAINS.

8 SPRINKLER HEAD LOCATIONS SHALL BE SYMMETRICAL WITH ROOM, LIGHTS, DIFFUSERS, ETC. AND COORDINATE WITH THE REFLECTIVE CEILING PLANS. HEADS SHALL BE AS FOLLOWS.

A. LAY-IN CEILING SHALL HAVE SEMI-RECESSED HEADS WITH ESCUTCHEON COLOR SELECTED BY THE ARCHITECT.

B. SHEET ROCK OR PLASTER CEILINGS SHALL HAVE FULLY CONCEALED HEADS WITH COLOR OF CAP SELECTED BY THE ARCHITECT.

9 ALL PIPING TO COMPLY WITH 2012 IBC SEISMIC DESIGN CATEGORY C, OCCUPANCY CATEGORY IV.

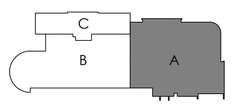
ERG# 15-28.2



PLAN NOTES:

1. STORM DRAIN PIPING DOWN TO BELOW FLOOR.
2. CONTINUATION UNDER ANOTHER DIVISION.
3. 6" WASTE FROM FLOOR ABOVE. OFF-SET ABOVE CEILING AND DROP TO BELOW GRADE.
4. 3" COLD WATER UP TO FLOOR ABOVE.
5. RUN OVERFLOW DRAIN IN WEBBING OF TRUSSES AND DROP OVERFLOW DRAIN DOWN IN WALL TO 11'-0" ABOVE FINISH FLOOR.
6. SECONDARY OVERFLOW DRAINAGE PIPE TO DROP DOWN TO 18" ABOVE GRADE AND DISCHARGE ABOVE GRADE. DISCHARGE FROM THIS PIPE INDICATES A PROBLEM EXIST.
7. 2" DRAIN LINE FROM ELEVATOR SUMP PUMP. DRAIN BELOW FLOOR TO CATCH BASIN IN PARKING GARAGE.
8. SECONDARY STORM OVERFLOW DRAIN FROM FLOOR ABOVE. OFF-SET ABOVE CEILING.
9. 6" STORM FROM ABOVE. CONTINUE DOWN TO BELOW GRADE.
10. SECONDARY STORM OVERFLOW FROM FLOOR ABOVE. TURN OUT ABOVE GRADE AND DISCHARGE THROUGH RD-3.
11. SECONDARY STORM OVERFLOW FROM FLOOR ABOVE. OFF-SET, AND TURN OUT ABOVE GRADE AND DISCHARGE THROUGH RD-3.
12. 6" STORM DRAIN FROM FLOOR ABOVE. CONTINUE DOWN TO BELOW GRADE.
13. 3" STORM DRAIN FROM FLOOR ABOVE. CONTINUE DOWN TO BELOW GRADE.

FIRE PROTECTION GENERAL NOTES

1. INCLUDE ALL LABOR, MATERIAL, E□UIPMENT AND SER□ICE NECESSARY FOR AND REASONABLY INCIDENTAL TO THE DESIGN, FABRICATION AND INSTALLATION OF THE COMPLETE AUTOMATIC FIRE PROTECTION SYSTEMS AS INDICATED ON THE CONTRACT DRA□INGS AND AS SPECIFIED IN THE CONTRACT SPECIFICATIONS.

2. THE FIRE SPRIN□LER SYSTEM DESCRIBED ON THE DRA□INGS AND IN THE SPECIFICATIONS SHALL BE FULLY DESIGNED BY THE FIRE PROTECTION CONTRACTOR S□ THE FIRE SUPPRESSION SYSTEM DRA□INGS AND SPECIFICATIONS ARE PERFORMANCE BASED ONLY. THE DESIGN BUILD CONTRACTOR S□ SHALL BE FULLY RESPONSIBLE FOR THE DESIGN AND TO PRO□IDE ALL NECESSARY E□UIPMENT, HARD□ ARE, CONTROLS, SENSOR, ETC. PER LOCAL FIRE PROTECTION CODES.

3. IN GENERAL, □ OR□ SHALL INCLUDE, BUT NOT BE LIMITED TO:
   A. COMPLETE O□ERHEAD AUTOMATIC SPRIN□LER SYSTEMS AS INDICATED ON THE CONTRACT DRA□INGS AND CONTRACT SPECIFICATIONS.
   B. CONNECTION TO UNDERGROUND FIRE SER□ICE.
   C. SYSTEMS AND DE□ICE TESTING.
   D. ALL NECESSARY PERMITS.

□□ THE FIRE SPRIN□LER SYSTEMS FOR PROTECTION OF THE SHOP BUILDING SHALL BE HYDRAULICALLY DESIGNED □ ET PIPE SPRIN□LER SYSTEMS AS SPECIFIED IN THE FOLLO□ ING
   A. OFFICES, INCLUDING CORRIDORS, LOUNGES, AND SIMILAR SPACES SHALL BE DESIGNED FOR A LIGHT HA□ARD OCCUPANCY TO PRO□IDE A MINIMUM DESIGN DISCHARGE DENSITY OF 0.10 GPM PER S□ FT O□ER THE HYDRAULIC CALCULATION AREA OR ROOM.
   B. SHOP AREA, MECHANICAL, MINOR STORAGE, AND SIMILAR AREAS OF THE BUILDINGS SHALL BE DESIGNED FOR AN ORDINARY HA□ARD GROUP 1 OCCUPANCY. MA□IMUM SPRIN□LER SPACING SHALL BE 130 S□ FT.
   C. ALL SPRIN□LERS □ ITHIN THE PRO□ECT AREA SHALL BE NE□ , □UIC□ RESPONSE, ORDINARY TEMPERATURE RATING □E□CEPT AS RE□UIRED BY NFPA 13 - 2010 SECTION 8.3.2.□.
   D. CALCULATIONS SHALL INCLUDE AN INSIDE HOSE STREAM ALLO□ ANCE OF 100 GPM.

5. PIPE SI□ES INDICATED ON THE CONTRACT DRA□INGS SHALL NOT BE REDUCED.

6. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ESTABLISHING AND IMPLEMENTING ALL SAFETY PROGRAMS AND PROCEDURES FOR THIS PRO□ECT AND SHALL COMPLY □ ITH ALL FEDERAL, STATE AND LOCAL SAFETY AND HEALTH REGULATIONS.

7. THE CONTRACT DRA□INGS ARE DIAGRAMMATIC ONLY. PIPE LENGTHS □IF SHO□ N□ ARE APPRO□IMATE CENTER TO CENTER LENGTHS BET□EEN FITTINGS. THE CONTRACTOR SHALL DETERMINE THE ACTUAL MEASUREMENTS AND MA□E ANY AND ALL SUCH LENGTH AND OFFSET AD□USTEMENTS AS MAY BE NECESSARY TO COMPLETE THE INSTALLATION AT NO CHANGE IN THE CONTRACT PRICE. THE CONTRACT DRA□INGS ARE NOT INTENDED TO RELIE□E THE CONTRACTOR OF ANY RESPONSIBILITY FOR A□OIDING CONFLICTS OR OBSTRUCTIONS, OR FOR INSTALLING THE NUMBER OF SPRIN□LERS AND SUPPLY PIPING AS RE□UIRED TO PRO□IDE COMPLETE PROTECTION OF THE DESIGNATED AREAS IN ACCORDANCE □ ITH THE RE□UIREMENTS OF THE REFERENCED STANDARDS AND THESE SPECIFICATIONS. □ RITTEN APPRO□AL SHALL BE OBTAINED FROM THE PROFESSIONAL PRIOR TO MA□ING ANY MA□OR DE□IATIONS FROM THE ARRANGEMENT AND LAYOUT SHO□ N ON THE CONTRACT DRA□INGS.

8. ALL E□UIPMENT SHALL BE LISTED BY UNDER□ RITER'S LABORATORIES AND□OR FACTORY MUTAL APPRO□ED.

9. SYSTEM, E□UIPMENT, INSTALLATION AND MATERIALS AND METHODS USED SHALL COMPLY □ ITH THE FOLLO□ ING:
   A. NATIONAL FIRE PROTECTION ASSOCIATION □NFPA□1 FIRE CODE 2012 EDITION.
   B. NFPA 13 STANDARD FOR THE INSTALLATION OF SPRIN□LER SYSTEMS 2010 EDITION.
   C. INTERNATIONAL BUILDING CODE - 2012
   D. MANUFACTURER'S RECOMMENDATIONS AND GUIDELINES.

10. ALL MATERIALS AND E□UIPMENT FURNISHED BY THE CONTRACTOR SHALL BE NE□ , FIRST GRADE STANDARD, CURRENT PRODUCTS OF A MANUFACTURER REGULARLY ENGAGED IN THE PRODUCTION OF SUCH MATERIALS AND E□UIPMENT. □ HERE T□ O OR MORE PIECES OF E□UIPMENT PERFORMING THE SAME FUNCTION ARE RE□UIRED, THEY SHALL BE THE PRODUCT OF ONE MANUFACTURER AND E□ACT DUPLICATES.

11. PIPING SHALL BE NE□ , DESIGNED FOR 300 PSI □ OR□ING PRESSURE, CONFORMING TO ASTM SPECIFICATIONS, AND HA□E THE MANUFACTURER'S NAME OR BRAND ALONG □ ITH THE PIPE APPLICABLE ASTM STANDARD MAR□ED ON EACH LENGTH OF PIPE.

12. PIPING 2" DIAMETER AND SMALLER SHALL BE SCHEDULE 40 BLACK STEEL PIPE. PIPE SHALL BE MANUFACTUERED IN ACCORDANCE □ ITH SPECIFICATIONS ASTM A53 AND A135.

13. PIPING 2-1/2" DIAMETER AND LARGER SHALL BE SCHEDULE 10 BLACK STEEL PIPE MANUFACTURED IN ACCORDANCE WITH SPECIFICATION ASTM A135.

1□. OTHER THIN-□ ALLED PIPING MATERIALS □SUCH AS SCHEDULE, 5, □L AND BLT THREADABLE THIN□ ALLS, ETC.□□ ILL NOT BE PERMITTED.

15. ALL FIRE PROTECTION SYSTEM PIPING SHALL BE PRO□IDED □ ITH FACTORY APPLIED ANTIMICROBIAL COATINGS TOINHIBIT MICROBIOLOGICALLY INFLUENCED CORROSION (MIC). ALLIED TUBE AND CONDUIT "ABF II", WHEATLAND TUBE COMPANY "MIC SHIELD" OR EQUAL.

16. THREADED FITTINGS SHALL BE CLASS 125 CAST IRON, BLAC□, AND IN ACCORDANCE □ ITH ANSI B16.□OR DUCTILE OR MALLEABLE IRON, 150 LB CLASS, BLAC□, AND IN ACCORDANCE □ ITH ANSI B16.3. SCRE□ ED □OINTS SHALL BE MADE UP □ ITH APPRO□ED TEFLON □OINT COMPOUND OR TAPE.

17. BOLT ON OR STRAP ON BRANCH AND OUTLET FITTINGS □ ILL NOT BE PERMITTED. SIMILARLY, HOLE CUT PIPING SYSTEM OR STRAPLESS OUTLETS □ ILL NOT BE PERMITTED.

18. GROO□ED COUPLINGS SHALL BE UL LISTED AND□OR FM APPRO□ED FOR FIRE PROTECTION SER□ICE. PLAIN-END TYPE PIPE FITTINGS AND COUPLINGS SHALL NOT BE USED.

19. ALL PENDENT AND SIDE□ ALL SPRIN□LERS LOCATED □ ITHIN 7 FT OF THE FLOOR OR SUB□ECT TO MECHANICAL DAMAGE SHALL BE PRO□IDED □ ITH LISTED SPRIN□LER GUARDS COMPATIBLE □ ITH THE SPRIN□LER MODELS AND TYPES ON □ HICH THEY ARE INSTALLED.

20. E□TRA SPRIN□LERS IN THE □UANTIES RE□UIRED BY NFPA 13, CABINETS, AND □ RENCHES SHALL BE SUPPLIED AND DELI□ERED TO THE PROFESSIONAL.

21. INSTALL HANGERS, FLE□IBLE CONNECTIONS, S□ ING □OINTS AND BRACING IN ACCORDANCE □ ITH NFPA 13.

22. SYSTEM PIPING SHALL BE INSTALLED SUCH THAT NO □OINTS, FITTINGS OR DE□ICES OCCUR DIRECTLY O□ER ELECTRICAL E□UIPMENT OR □ ITHIN THE CLEARANCE SPACE AS RE□UIRED BY THE NATIONAL ELECTRIC CODE □NEC□

23. IMPAIRMENTS OF E□ISTING FIRE PROTECTION SYSTEMS SHALL BE MINIMI□ED, COORDINATED □ ITH THE PROFESSIONAL AND PERFORMED IN ACCORDANCE □ ITH NFPA 25. ALL E□ISTING FIRE PROTECTION SYSTEMS SHALL BE RESTORED TO SER□ICE AT THE END OF EACH □ OR□ING DAY.

2□. THE □ OR□ PERFORMED ON THIS PRO□ECT OCCURS □ ITHIN AN E□ISTING BUILDING. ALL E□UIPMENT AND MATERIAL TO BE FURNISHED AND INSTALLED ON THE PRO□ECT SHALL BE COORDINATED □ ITH THE SPACE CONSTRAINTS. ALL E□UIPMENT AND MATERIAL SHALL BE FABRICATED SUCH THAT COMPLETE SYSTEMS MAY BE BRO□EN DO□ NI INTO SECTION SUITABLE FOR LIFTING AND FITTING THROUGH PASSAGE□AYS □ ITHOUT MODIFCATION TO THE BUILDING UNLESS OTHER□ISE NOTED, OR OTHER ARRANGEMENTS ARE MADE □ ITH THE PROFESSIONAL.

25. THE CONTACTOR SHALL BE RESPONSIBLE FOR ALL OPENINGS AND PENETRATIONS RE□UIRED FOR THE FIRE PROTECTION PIPING.

26. CUTTING STRUCTURAL MEMBERS FOR THE PASSING OF FIRE PROTECTION PIPING OR PIPE HANGER FASTENING □ ILL NOT BE PERMITTED E□CEPT □ ITH APPRO□AL OF THE PROFESSIONAL.

27. SUITABLE MEANS SHALL BE PRO□IDED AT EACH HOLE OR PENETRATION TO MAINTAIN THE DESIGNED FIRE RESISTANCE RATING OF THE □ ALL, CEILING, OR FLOOR ASSEMBLY.

28. INSTALL SPLIT □ ALL PLATES OR ESCUTCHEONS □ HERE E□POSED PIPING PASSES THROUGH A FINISHED FLOOR, □ ALL OR CEILING. THEY SHALL FIT SNUGLY AROUND PIPING. THE FINISH OF ESCUTCHEONS OR □ ALL PLATES SHALL MATCH THE COLOR OF AD□ACENT □ ALLS, CEILINGS, OR FLOORS.

29. UPON COMPLETION OF INSTALLATION AND □ HILE PIPING IS STILL E□POSED, HYDROSTATICALLY TEST THE SYSTEMS AT 200 PSI □OR 50 PSI IN E□CES OF THE SYSTEM □ OR□ING PRESSURE, □ HICHE□ER IS GREATER□FOR A PERIOD OF 2 HOURS. PORTIONS OF THE SYSTEM MAY BE TESTED AS THEY ARE COMPLETED. SE□ENTY-T□ O HOUR NOTICE SHALL BE GI□EN TO THE PROFESSIONAL AND THE AUTHORITY HA□ING □URISDICTION PRIOR TO ANY TEST. A PRE-INSTALLATION INSPECTION OF PIPE, FITTINGS, AND DE□ICES IS RE□UIRED.

30. SPRIN□LER HEADS INSTALLED IN TILE CEILINGS SHALL BE INSTALLED IN THE CENTER OF THE TILES.

31. SPRIN□LER SYSTEM DRAIN LINES SHALL BE ROUTED AS INDICATED ON FLOOR PLANS AND FULLY COORDINATED □ ITH ALL TRADES SUCH THAT IT A□OIDS THE TRA□EL PATH OF THE O□ERHEAD CRANE . REFER TO SECTION 2 ON SHEET A30□.

32. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL LEA□S.

EDHWR	EXISTING DOMESTIC HOT WATER RECIRC
EG	EXISTING GAS (NATURAL)
ERL	EXISTING REFRIGERANT LIQUID
ERS	EXISTING REFRIGERANT SUCTION

GENERAL NOTES - HVAC

GENERAL RENOVATION REQUIREMENTS

A. ALL PIPING SHOWN WITH DASHED LINES - DASHED LINES REPRESENT OUTSIDE DIMENSION OF PIPE INCLUDING INSULATION.
B. ANY INDICATED MOUNTING HEIGHTS ARE APPROXIMATE. FINAL MOUNTING HEIGHT SHALL BE DETERMINED IN FIELD.
C. INSTALLATION OF ALL EQUIPMENT AND SYSTEMS SHALL BE IN ACCORDANCE WITH, MANUFACTURER'S REQUIREMENTS, STANDARD DETAILS, SECTIONS AND ELEVATIONS SHOWN ON THE DRAWINGS.
D. CONTRACTOR SHALL MAINTAIN A CLEAR SERVICE AREA AROUND ALL EQUIPMENT FOR MAINTENANCE.

PLAN NOTES

1. 1-1/4" HWS, 1-1/4" HWR, 2" CHS, 2" CHR DOWN FROM FLOOR ABOVE. CONTINUE 1" HWS, 1" HWR, 2" CHS, 2" CHR DOWN TO FLOOR BELOW.
2. 3" HWS, 3" HWR, 4" CHS, 4" CHR DOWN FROM FLOOR ABOVE. CONTINUE 2" HWS, 2" HWR, DOWN TO FLOOR BELOW.
3. 10x10" EXHAUST DUCT UP FROM FLOOR BELOW. PROVIDE FIRE DAMPER AT FLOOR SLAB.
4. 10x10" EXHAUST DUCT UP TO EF-7 ON ROOF.
5. 20x14" EXHAUST DUCT UP TO EF-5 ON ROOF.
6. 12"ø STAINLESS STEEL EXHAUST DUCT UP FROM FLOOR BELOW.
7. 12"ø STAINLESS STEEL EXHAUST DUCT UP TO EF-8 ON ROOF.
8. 1/4" RL, 1/2" RS REFRIGERANT LINES DOWN TO FLOOR BELOW.
9. 3/8" RL, 5/8" RS REFRIGERANT LINES DOWN FROM OU-1 ON ROOF.
10. MITSUBISHI BRANCH HEADER MODEL# CMY-Y68-G-E. CAP ALL UNUSED BRANCH TAPS.
11. 4"ø CONCENTRIC VENT UP THRU ROOF. SEE DETAIL.
12. 1/2" RL, 5/8" RS REFRIGERANT LINES DOWN FROM CU-1 ON ROOF.
13. 1/2" RL, 5/8" RS REFRIGERANT LINES DOWN FROM CU-2 ON ROOF.

CONTROL POINTS

Points List Table Column Definitions:

1. Point Description.
2. Type (number in point list schedule after each type refers to tag on schematics).
   - 2.1. AO: analog output
   - 2.2. AI: analog input
   - 2.3. DO: digital or binary output
   - 2.4. DI: digital or binary input
3. Device description.
   - 3.1. See Specification Section 230913 EMCS Basic Materials and Devices for device definitions and specifications.
4. Trend Logging.
   - 4.1. Commissioning: Where listed, point is to be trended at the basis listed for commissioning and performance verification purposes.
   - 4.2. Continuous: Where listed, point is to be trended at the basis listed continuously, initiated after system acceptance, for the purpose of future diagnostics.
   - 4.3. Trend Basis
     - 4.3.1. Where range of engineering units is listed, trend on a change of value (COV) basis (in other words record time stamp and value when point value changes by engineering unit listed).
     - 4.3.2. Where time interval is listed, trend on a time basis (in other words record time stamp and value at interval listed). All points related to a specific piece of equipment shall be trended at the same initiation time of day so data can be compared in text format.
5. Calibration.
   - 5.1. F = factory calibration only is required (no field calibration)
   - 5.2. HH = field calibrate with handheld device. Test/calibration equipment shall be at least twice as accurate as respective field device (for example if field device is ±0.5% accurate, test equipment shall be ±0.25% accurate over same range).

Note that points lists herein are for each system of like kind. Refer to Drawings for quantity of each.

SEQUENCES OF OPERATION – GENERAL

1. General:
   - 1.1. Contractor shall review sequences prior to programming and suggest modifications where required to achieve the design intent. Contractor may also suggest modifications to improve performance and stability or to simplify or reorganize logic in a manner that provides equal or better performance. Proposed changes in sequences shall be included as a part of Submittal Package 2.
   - 1.2. Include costs for program modifications if required to provide proper performance of the system.
   - 1.3. Unless otherwise indicated in SOOs, control loops shall be enabled and disabled based on the status of the system being controlled to prevent wind-up. Loops shall be initiated with the output set to a neutral (deadband) condition, e.g. valves and dampers close, VFDs at minimum speed, etc.
   - 1.4. When SOOs use outdoor air temperature present value and there are multiple outdoor air sensors, the physically closest sensor reading shall be used.
   - 1.5. The term "proven" (i.e. "proven on" / "proven off") shall mean that the equipment's DI status point matches the state set by the equipment's DO command point.
   - 1.6. The term "PID loop" or "control loop" is used generically for all control loops and shall not be interpreted as requiring proportional plus integral plus derivative gains on all loops. Unless specifically indicated otherwise, the following guidelines shall be followed:
     - 1.6.1. Use proportional only (P-only) loops for limiting loops (such as zone CO2 limiting loops, etc.) to ensure there is no integral windup.
     - 1.6.2. Do not use the derivative term on any loops unless field tuning is not possible without it.
   - 1.7. All setpoints, timers, deadbands, PID gains, etc. listed in sequences shall be capable of being adjusted by the operator (with full administrative access) without having to access programming whether indicated as adjustable in sequences or not. Software (virtual) points shall be used for these setpoints. Fixed scalar numbers shall not be imbedded in programs unless the value will never need to be adjusted.
   - 1.8. Values for all points, including real (hardware) points used in control sequences shall be capable of being overridden by the user (e.g. for testing and commissioning). If hardware design prevents this for hardware points, they shall be equated to a software point and the software point shall be used in all sequences. Exception: Not required for ASC hardware points.
   - 1.9. VFD speed points:
     - 1.9.1. The speed analog output sent to VFDs shall be configured such that 0% speed corresponds to 0 HZ and 100% speed corresponds to maximum speed configured in the VFD.
     - 1.9.2. Minimum speed setpoints for all VFD-driven equipment shall be determined in accordance with the following:
       - 1.9.2.1. Tests shall be done for each piece of equipment, except that for multiple pieces of identical equipment used for identical applications, only one piece of equipment need be tested with results applied to all. Note that for fans, there is no minimum speed required for motor cooling. Power drops with cube of speed, causing motor losses to be minimal at low speeds.
       - 1.9.2.2. The work shall be done only after fan system is fully installed and operational.
       - 1.9.2.3. Determine minimum speed setpoint as follow:
         - 1.9.2.3.1. Start the fan.
         - 1.9.2.3.2. Manually set speed to 6 Hz (10%) unless otherwise indicated in control sequences. For cooling towers with gear boxes, use 20% or whatever minimum speed is recommended by tower manufacturer.
         - 1.9.2.3.3. Observe fan in field to ensure it is visibly rotating. If not, gradually increase speed until it is.
         - 1.9.2.3.4. The speed at this point shall be the minimum speed setpoint for this piece of equipment.
         - 1.9.2.3.5. Record minimum speeds in log and store in software point as indicated in Specifications.
     - 1.9.3. For each piece of equipment the minimum speed shall be stored in a single software point. This value shall be written to the VFD's minimum speed setpoint via the drive's network interface. In this way there is only one minimum setpoint, rather than setpoints both in the drive and in software which could differ.
   - 1.10. Trim & Respond Setpoint Reset Logic:
     - 1.10.1. Trim & Respond setpoint reset logic and zone/system reset requests where referenced in sequences shall be implemented as described below.
     - 1.10.2. "Requests" are pressure, cooling, or heating setpoint reset requests generated by zones or air handling systems.
       - 1.10.2.1. For each zone or system, and for each setpoint reset request type listed for the zone/system, provide he following software points:
         - 1.10.2.1.1. Importance Multiplier (default = 1). This point is used to scale the number of requests the zone/system is generating. A value of zero causes the zone/system's requests to be ignored. A value greater than zero can be used to effectively increase the number of requests from the zone/system based on the critical nature of the spaces served, or to increase the requests beyond the number of ignored requests (defined below) in the Trim & Respond reset block.
         - 1.10.2.1.2. Request-hours:
           - 1.10.2.1.2.1. This point accumulates the integral of requests (prior to adjustment of Importance Multiplier) to help identify zones/systems that are driving the reset logic. Every x minutes (adjustable, default 5 minutes), add x/60 times the current number of requests to this request-hours accumulator point.
           - 1.10.2.1.2.2. The request-hours point is reset to zero upon a global command from the system serving the zone/system – this global point simultaneously resets the request-hours point for all zones/systems served by this system/plant.
           - 1.10.2.1.2.3. Cumulative %-request-hours is the zone request-hours divided by the zone run-hours (the hours in any Mode other than Unoccupied Mode) since the last reset, expressed as a percentage.
           - 1.10.2.1.2.4. A Level 4 alarm is generated if the zone Importance Multiplier is greater than zero, the zone %-request-hours exceeds 70%, and the total number of zone run-hours exceeds 40.
       - 1.10.2.2. See zone and air handling system control sequences for logic to generate requests.
       - 1.10.2.3. Multiply the number of requests determined from zone/system logic times the Importance Multiplier and send to the system/plant that serves the zone/system. See system/plant logic to see how requests are used in Trim & Respond logic.
     - 1.10.3. Variables. All variables below shall be adjustable from a reset graphic accessible from a hyperlink on the associated system/plant graphic. Initial values are defined in system/plant sequences herein. Values from trim, respond, time step, etc. shall be tuned to provide stable control.

Variable	Definition
Device	Associated device (e.g. fan)
SP0	Initial setpoint
SPmin	Minimum setpoint
SPmax	Maximum setpoint
Td	Delay timer
T	Time step
I	Number of ignored requests
R	Number of requests from zones/systems
SPtrim	Trim amount
SPres	Respond amount
SPres–max	Maximum response per time interval

     - 1.10.4. Trim & Respond logic shall reset setpoint within the range SPmin to SP max. When the associated device is off, the setpoint shall be SP0. The reset logic shall be active while the associated device is proven on, starting Td after initial device start command. When active, every time step T, trim the setpoint by SPtrim. If there are more than I Requests, respond by changing the setpoint by SPres times (R – I), i.e. (the number of Requests minus the number of Ignored requests). But the net response shall be no more than SPres–max. The sign of SPtrim must be the opposite of SPres and SPres–max. For example, if SPtrim = –0.1, SPres = +0.15, SPres–max = +0.35, R = 3, I = 2, then each time step, the setpoint change = –0.1 + (3 – 2)*0.15 = +0.05. If R = 10, then setpoint change = –0.1 + (10 – 2)*0.15 = 1.1 but limited to a maximum of 0.35. If R = 2, the setpoint change is –0.1.
   - 1.11. Lead/lag and lead/standby alternation:
     - 1.11.1. Even wear:
       - 1.11.1.1. Lead/lag: Unless otherwise noted, parallel staged devices (such as fans, pumps, towers) shall be lead/lag alternated when more than one is off or more than one is on so that the device with the most operating hours is made the later stage device and the one with the least number of hours is made the earlier stage device. For example, assuming there are three devices, if all three are off or all are on, the staging order will simply be based on run hours from lowest to highest. If two devices are on, the one with the most hours will be set to be stage 2 while the other is set to stage 1; this may be the reverse of the operating order when the devices were started. If two devices are off, the one with the most hours will be set to be stage 3 while the other is set to stage 2; this may be the reverse of the operating order when the devices were stopped.
       - 1.11.1.2. Lead/standby: Unless otherwise noted, parallel devices (such as pumps, towers) that are 100% redundant shall be lead/standby alternated when more than one is off so that the device with the most operating hours is made the later stage device and the one with the least number of hours is made the earlier stage device. For example, assuming there are three devices, if all three are off, the staging order will be based on run hours from lowest to highest. If devices run continuously, lead/standby shall switch at an adjustable runtime; standby device shall first be started and proven on before former lead device is changed to standby and shut off.

SEQUENCES OF OPERATION – GENERAL CONT'D

   - 1.11.2. Exceptions:
     - 1.11.2.1. Operators shall be able to manual fix staging order via software points on graphics overriding the Even Wear logic above, but not overriding the Failure or Hand Operation logic below.
     - 1.11.2.2. Failure: If the lead device fails or has been manually switched off, the device shall be placed into high level alarm (Level 2) and set to the last stage position in the lead/lag order until alarm is reset by operator. Staging position of remaining devices shall follow the Even Wear logic. A failed device in alarm can only automatically move up in the staging order if another device fails. Note that a device in alarm will be commanded to run if the sequence calls for it to run. In this way the EMCS will keep trying to run device(s) until if finds enough that will operate. Failure is determined by:
       - 1.11.2.2.1. Variable Speed Fans and Pumps:
         - 1.11.2.2.1.1. VFD critical fault is ON.
         - 1.11.2.2.1.2. Status point not matching its on/off point for 15 seconds when device is commanded on.
         - 1.11.2.2.1.3. Supervised HOA at control panel is OFF position.
         - 1.11.2.2.1.4. Loss of power (e.g. VFD DC Bus voltage = zero).
       - 1.11.2.2.2. Constant Speed Fans and Pumps:
         - 1.11.2.2.2.1. Status point not matching its on/off point for 15 seconds when device is commanded on.
         - 1.11.2.2.2.2. Supervised HOA at control panel is OFF position.
     - 1.11.2.3. Hand Operation. If a device is on in Hand (for example via an HOA switch or local control of VFD), the device shall be set to the lead device and a low level alarm (Level 4) shall be generated. The device will remain as lead until the alarm is reset by the operator. Hand operation is determined by:
       - 1.11.2.3.1. Variable Speed Fans and Pumps:
         - 1.11.2.3.1.1. Status point not matching its on/off point for 15 seconds.
         - 1.11.2.3.1.2. VFD in local "hand" mode.
         - 1.11.2.3.1.3. Supervised HOA at control panel in ON position.
       - 1.11.2.3.2. Constant Speed Fans and Pumps:
         - 1.11.2.3.2.1. Status point not matching its on/off point for 15 seconds when device is commanded off.
         - 1.11.2.3.2.2. Supervised HOA at control panel in ON position.
   - 1.12. VAV Box Controllable Minimum:
     - 1.12.1. This section is used to determine the lowest possible VAV box airflow setpoint allowed by the controls (Vm) used in VAV box control sequences. The minimums shall be stored as software points that may be adjusted by the user but need not be adjustable via the graphical user interface.
     - 1.12.2. Option 1: If the VAV box controls simply stop moving the damper when the airflow reading becomes too low to register and then re-enables the damper when the airflow reading rises above that threshold, Vm shall be equal to zero.
     - 1.12.3. Option 2: The minimum setpoint Vm shall be determined as follows:
       - 1.12.3.1. Determine the velocity pressure sensor reading VPm in inches H20 that results in a digital reading from the transducer and A/D converter of 12 bits or counts (assuming a 10 bit A/D converter). This is considered sufficient resolution for stable control. See Specification Section 230929.
       - 1.12.3.2. Using the velocity pressure sensor amplification factor provided by the sensor manufacturer for each VAV box sensor size, calculate the minimum velocity vm for each VAV box size as:

$$vm = 4005*sqrt(VPm/F)$$

Where F is not known it can be calculated from the measured CFM at 1 inch signal from the VP sensor:

$$F = (4005*A/CFM)^2$$

where A is the nominal duct area (square feet), equal to:

$$A = \pi(D/24)^2$$

where D is the nominal duct diameter (inches).

       - 1.12.3.3. Calculate the minimum airflow setpoint allowed by the controls (Vm) for each VAV box size as:

$$Vm = vm*A$$

2. Zones:
   - 2.1. This section applies to all single zone systems and sub-zones of air handling systems, such as VAV boxes, fan-powered boxes, etc.
   - 2.2. Setpoints:
   - 2.3.
     - 2.3.1. Each zone shall have separate unoccupied and occupied setpoints, and separate heating and cooling setpoints. As a default:

Zone Type	Occupied		Unoccupied	
	Heat	Cool	Heat	Cool
Exterior	70°F	74°F	60°F	90°F
Interior	70°F	73°F	60°F	90°F
Circulation	69°F	76°F	60°F	90°F
Mech/Elec Rooms	60°F	85°F	60°F	85°F
Network/IT	65°F	75°F	65°F	75°F

     - 2.3.2. The software shall prevent:
       - 2.3.2.1. The heating setpoint from exceeding the cooling setpoint minus 1°F (in other words the minimum deadband shall be 1°F).
       - 2.3.2.2. The cooling setpoint from exceeding the occupied heating setpoint; and
       - 2.3.2.3. The unoccupied cooling setpoint from being less than the occupied cooling setpoint.
     - 2.3.3. Where the zone has a local occupant adjustable setpoint adjustment knob/button:
       - 2.3.3.1. The adjustment shall be capable of being limited in software.
         - 2.3.3.1.1. As a default, occupied cooling setpoint shall be limited between 72°F and 80°F.
         - 2.3.3.1.2. As a default, occupied heating setpoint shall be limited between 65°F and 72°F.
       - 2.3.3.2. The adjustment shall move both the existing heating and cooling setpoints upwards or downwards by the same amount unless the limit has been reached.
       - 2.3.3.3. The adjustment shall only be active in Occupied mode.
     - 2.3.4. The operative setpoint shall be determined by the Zone Group's mode:
       - 2.3.4.1. The setpoints shall be the occupied setpoint during Occupied mode, Warm-up mode, and Cool-down mode.
       - 2.3.4.2. The setpoints shall be the unoccupied setpoints during Unoccupied mode, Setback mode, and Setup mode.
     - 2.3.5. Hierarchy of Setpoint Adjustments: The following adjustment restrictions shall prevail in order from highest to lowest priority:
       - 2.3.5.1. Setpoint overlap restriction specified herein.
       - 2.3.5.2. Local setpoint adjustment.
       - 2.3.5.3. Scheduled setpoints based on Zone Group mode.
   - 2.4. Local override: When thermostat override buttons are depressed, the request for Occupied Mode operation shall be sent up to the Zone Group control for 60 minutes. (This will cause all zones in the Zone Group to operate in Occupied Mode to ensure that the system has adequate load to operate stably.)
   - 2.5. Control Loops:
     - 2.5.1. Two separate control loops shall operate to maintain space temperature at setpoint, the Cooling Loop and the Heating Loop. Both loops shall be continuously active.
     - 2.5.2. The Cooling Loop shall maintain the space temperature at the active cooling setpoint. The output of the loop shall be a virtual point ranging from 0% (no cooling) to 100% (full cooling).
     - 2.5.3. The Heating Loop shall maintain the space temperature at the active heating setpoint. The output of the loop shall be a virtual point ranging from 0% (no heating) to 100% (full heating).
     - 2.5.4. Loops shall use proportional + integral logic or fuzzy logic. Proportional-only control is not acceptable, although the integral gain shall be small relative to the proportional gain. P and I gains shall be adjustable from the Operator Workstation.
     - 2.5.5. See other sections for how the outputs from these loops are used.
   - 2.6. Zone Modes:
     - 2.6.1. Heating Mode: when the output of the space heating control loop is greater than zero.
     - 2.6.2. Cooling Mode: when the output of the space cooling control loop is greater than zero and the output of the heating loop is equal to zero.
     - 2.6.3. Deadband Mode: when not in either the Heating or Cooling Mode.

SEQUENCES OF OPERATION – GENERAL CONT'D

   - 2.7. Alarms:
     - 2.7.1. Zone temperature alarms:
       - 2.7.1.1. If the zone is 3°F above cooling or below heating setpoints for 10 minutes, generate Level 3 alarm.
       - 2.7.1.2. If the zone is 5°F above cooling or below heating setpoints for 10 minutes, generate Level 2 alarm.
       - 2.7.1.3. Suppress zone temperature alarms as follows:
         - 2.7.1.3.1. After zone setpoint is changed for a period of 10 minutes per degree of difference between the zone temperature at the time of the change and the new setpoint. This suppression period applies any time that the zone setpoint is changed.
         - 2.7.1.3.2. While Zone Group is in Warm-up or Cool-down Modes.
         - 2.7.1.3.3. For zones with an Importance multiplier (see Trim & Respond sequences above) of zero.
     - 2.7.2. For zones with CO2 sensors:
       - 2.7.2.1. If the CO2 concentration is less than 300 ppm, or the zone is in unoccupied mode for more than 2 hours and zone CO2 concentration exceeds 600 ppm, generate a Level 4 alarm, indicating sensor may be out of calibration.
       - 2.7.2.2. If the CO2 concentration exceeds setpoint plus 10% for more than 10 minutes generate a Level 3 alarm.
3. Zone Groups (aka Isolation Areas):
   - 3.1. Each system shall be broken into separate Zone Groups composed of a collection of one or more zones served by the air handling system.
   - 3.2. Each Zone Group shall have separate occupancy schedules and operating modes from other Zone Groups served by the air handling system. All zones in the Zone Group shall be in the same operating mode.
   - 3.3. Individual Zone Groups shall be as follows:

Zone Group Name	AHU Tag	Terminal Unit Tags	Default Schedule
Offices, Restrooms	AHU–1	VAV–1–1 thru VAV–1–20	WD: 6am to 8pm WE: 8 am to 10pm HOL: off
Classrooms	AHU–2	VAV–2–1 thru VAV–2–20	WD: 6am to 8pm WE: 8 am to 10pm HOL: off
Laboratories	AHU–3	VAV–3–1 thru VAV–3–20	WD: 6am to 8pm WE: 8 am to 10pm HOL: off

   - 3.4. Provide testing/commissioning software switches to override all zones served by the Zone Group. Provide a single software switch for each of the zone override switches listed under terminal box control above. When the Zone Group override switch value is changed, the terminal box zone override switch value for each zone in the Zone Group shall change to the same value. This only occurs when the switch changes value; the switch at each zone shall be capable of being changed to a different value from the Zone Group switch. These software switches are for commissioning and need not be shown on graphics.
   - 3.5. Zone Group Operating Modes: Each Zone Group shall have the following modes:
     - 3.5.1. Occupied Mode: A Zone Group is in the occupied mode when any of the following is true:
       - 3.5.1.1. The time of day is between the Zone Group's scheduled occupied start and stop times.
       - 3.5.1.2. Manual override from zone temperature sensor.
     - 3.5.2. Warm-up mode. Warm-up start time shall be determined based on the zone in the Zone Group whose space temperature is furthest below its occupied heating temperature setpoint, the outside air temperature (using global outdoor air temperature sensor, not any associated with AHUs), and a building mass/capacity factor. This factor shall be manually adjusted or self-tuned by the program based on internal trending so that all zones in the Zone Group are brought up to their occupied setpoint by the scheduled occupied start hour. The tuning period mode shall be turned on or off by a software switch (to allow tuning to be stopped after the system has been trained). Warm-up mode shall start no earlier than 3 hours before the scheduled occupied start hour and shall end at the scheduled occupied start hour. occupied start hour
     - 3.5.3. Cool-down mode. Cool-down shall be determined based on the zone in the Zone Group whose space temperature is furthest above its occupied cooling temperature setpoint, the outside air temperature (using global outdoor air temperature sensor, not any associated with AHUs), and a building mass/capacity factor. This factor shall be manually adjusted or self-tuned by the program based on internal trending so that all zones in the Zone Group are brought down to their occupied setpoint by the scheduled occupied start hour. The tuning period mode shall be turned on or off by a software switch (to allow tuning to be stopped after the system has been trained). Cool-down mode shall start no earlier than 3 hours before the scheduled occupied start hour and shall end at the scheduled occupied start hour.
     - 3.5.4. Setback mode. During other than normal mode, and warm-up mode, if any 2 (adjustable; set to all zones if there are fewer in Zone Group) zone(s) in the Zone Group falls 2°F below its active unoccupied setback setpoint, until all spaces in the Zone Group are above their active setback setpoints.
     - 3.5.5. Setup mode. During other than normal mode, warm-up mode, and setback mode, if any 2 (adjustable; set to all zones if there are fewer in Zone Group) zone(s) in the Zone Group rises 2°F above its active unoccupied setup setpoint until all spaces in the Zone Group are below their active setup setpoints.
     - 3.5.6. Unoccupied Mode: When the Zone Group is not in any other mode.
4. Air Handling Unit, Fan Coil Unit, Blower Coil Unit, Split-System Unit System Modes:
   - 4.1. AHU, FCU, BCU, and/or Split-System modes are the same as the mode of the Zone Groups served by the system. When Zone Groups served by an air handling system are in different modes, the following hierarchy applies (highest one sets AHU mode):
     - 4.1.1. Occupied mode.
     - 4.1.2. Cool-down mode.
     - 4.1.3. Setup mode.
     - 4.1.4. Warm-up mode.
     - 4.1.5. Setback mode.
     - 4.1.6. Unoccupied mode.
5. Miscellaneous Alarms:
   - 5.1. Points in Hand (Operator Override) via Workstation command (including name of operator who made the command) or via supervised HOA switch at output: Level 4.
   - 5.2. Equipment alarm (for equipment with alarm contacts such as VFDs): Level 2.
   - 5.3. Failure or disconnection of a sensor as indicated by signal widely out of range: Level 2.
   - 5.4. Panel or LAN failure: Level 2.
   - 5.5. Loss of communication with any device via Gateway (e.g. VFD) for more than 30 seconds: Level 2 (alarm shall indicate which specific device is not responding).

CONTROLS LEGEND

GENERAL

- SA — SUPPLY AIR
- OA — OUTSIDE/OUTDOOR AIR
- RA — RETURN AIR
- EA — EXHAUST AIR

EQUIPMENT

- 2–WAY VALVE
- 3–WAY VALVE
- SD — SMOKE DETECTOR
- FAN – PROPELLER
- FAN – CENTRIFUGAL HOUSED
- FAN – PLUG / PLENUM
- FURNACE
- FILTER
- AFMS–X — AIR FLOW MEASURING STATION
- C / C — COIL
- OPPOSED BLADE DAMPER
- PARALLEL BLADE DAMPER
- ENABLE / RUN / SPEED / NETWORK / VFD — VARIABLE SPEED DRIVE

SENSORS

- STATIC PRESSURE TIP
- SENSOR WELL
- T — TEMPERATURE SENSOR & SENSOR WELL
- HT–X / TS–X — HUMIDITY TRANSMITTER (HT) OR TEMPERATURE SENSOR (TS) – DUCT MTD. (SINGLE POINT)
- TS–X — AVERAGING TEMPERATURE SENSOR
- M — MODULATING ACTUATOR
- M2 — 2–POSITION ACTUATOR
- DPS–X — DIFFERENTIAL PRESSURE SWITCH
- DPT–X — DIFFERENTIAL PRESSURE TRANSMITTER
- FM–X — FLOW METER

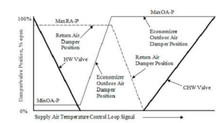
AHU SEQUENCE OF OPERATION

General: Variable Air Volume (VAV) Air Handling Unit (AHU) with pre-heat coil, chilled water coil, supply fan(s), exhaust/relief fan(s).

AHU System Modes: AHU system modes are the same as the mode of the Zone Group served by the system. When Zone Groups served by an air handling system are in different modes, the following hierarchy applies (highest one sets AHU mode):

1. Occupied mode
2. Cool-down mode
3. Setup mode
4. Warm-up mode
5. Setback mode
6. Unoccupied mode

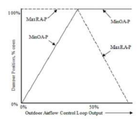
Supply Fan Control:



1. Supply Fan Start/Stop
   - 1.1. AHU supply fan(s) shall run when system is in any mode other than Unoccupied Mode.
   - 1.2. Fan VFD's shall be hard-wire interlocked through smoke detectors, high discharge pressure, and low mixed air temperature safety relay mounted in the control panel in each AHU control panel. The relay energizes when high-limit DP switches sense pressure above 3.0 inches (adjustable) at the fan discharge, smoke detector auxiliary contacts are energized or the low-limit thermostat tripped, locking out the fans until they are reset by the reset DO point or a push button on the panel face. A pilot light on the panel face indicates static pressure safety lockout is in effect.
   - 1.3. Totalize current airflow rate from VAV boxes and display on AHU graphic at discharge duct.
2. Static Pressure Setpoint Reset
   - 2.1. Static pressure setpoint: Setpoint shall be reset using Trim & Respond Logic (see Trim & Respond description herein) with the following parameters.

Variable	Value
Device	Supply Fan
SPtl	0.5 inches
SPmin	0.1 inches
SPmax	Per 230593
Td	10 minutes
T	2 minutes
I	2
R	Zone Static Pressure Reset Requests
SPtrim	-0.5 inches
SPres	+0.06 inches
SPres-max	+0.13 inches

3. Static Pressure Control
   - 3.1. Fan speed shall be controlled to rise very slowly to prevent high pressure trips in case all VAV boxes are closed (they should close during unoccupied periods) or in case fire/smoke dampers are closed (in some FSD designs, the dampers are interlocked to the fan status rather than being controlled by smoke detectors). This can be configuring the VFD ramp rate or controlling ramp rate in EMCS software.
   - 3.2. Supply fan speed is controlled to maintain duct static pressure at setpoint when the fan is proven on. See Specifications for minimum speed setpoint. Where the Zone Groups served by the system are small, provide multiple sets of PID gains that are used in the PID loop as a function of a load indicator (such as supply fan airflow rate, the area of the Zone Groups that are occupied, etc.).



Supply Air Temperature Control

1. Control loop is enabled when the supply air fan is proven on and disabled and output set to zero otherwise.
2. Supply Air Temperature Setpoint: 55 °F.
3. Supply air temperature shall be controlled to setpoint using a PID loop whose output is mapped to sequence the hot water valve, economizer/outdoor air damper, return air damper, and chilled water valve as shown in the diagram below. Outdoor air and return air dampers are sequenced rather than complementary (as per most standard sequences) to reduce fan power at part loads.
   - 3.1. For units with a single common minimum outdoor air and economizer damper: MaxRA-P and MinOA-P are modulated to control minimum outdoor air volume, as described below.
   - 3.2. The points of transition along the x-axis show and described below are representative. Separate gains shall be provided for each section of the control map (hot water, economizer, chilled water), that are determined by the Contractor to provide stable control. Alternatively, Contractor shall adjust the precise value of the x-axis thresholds shown in the figure to provide stable control.

Economizer/Outdoor Air Damper Control:

1. Minimum Outdoor Air Control Loop:
   - 1.1. See zone CO2 controls under VAV zone controls.
   - 1.2. Outdoor air minimum and maximum setpoints for systems with multiple Zone Groups.
     - 1.2.1. AbsMinOA* is the sum of Vareq-min for all zones in all Zone Groups that are in Occupied Mode, but shall be no larger than the absolute minimum outdoor air rate, 'Abs Min OA' scheduled on Drawings.
     - 1.2.2. DesMinOA* is the sum of OA-min for all zones in all Zone Groups that are in Occupied Mode, but shall be no larger than the design minimum outdoor air rate, 'Occ Min OA' scheduled on Drawings.
   - 1.3. OA Setpoint (MinOAsp). The minimum outdoor air setpoint (MinOAsp) shall be reset based on the highest zone CO2 PID loop signal from AbsMinOA* at 50% signal to DesMinOA* at 100% signal.
   - 1.4. Minimum Outdoor Air Control Loop:
     - 1.4.1. Minimum outdoor air control loop is enabled when the supply fan is proven on and the AHU is in Occupied Mode and disabled and output set to zero otherwise.
     - 1.4.2. The outdoor airflow rate shall be maintained at the minimum outdoor air setpoint MinOAsp by a reverse-acting control loop whose output is mapped to economizer damper minimum position, MinOA-P, and return air damper maximum position, MaxRA-P, as indicated in the figure below.

   - 1.5. Economizer High Limit Lockout:
     - 1.5.1. The normal sequencing of the economizer dampers (above) shall be disabled when TOA > 65°F.
     - 1.5.2. When economizer is enabled, MaxOA-P = 100%.
     - 1.5.3. Once the economizer is disabled, it shall not be re-enabled within 10 minutes, and vice versa.
     - 1.5.4. When the economizer is disabled:
       - 1.5.4.1. Return air damper shall be fully opened.
       - 1.5.4.2. Wait 15 seconds, then set MaxOA-P equal to MinOA-P.
       - 1.5.4.3. Wait 3 minutes, then release return air damper for minimum outdoor air control.

Exhaust/Relief Fan Control:

1. All operating relief fans that serve a common/shared air volume shall be grouped and controlled as if they were one system, running at the same speed and using the same control loop, even if they are associated with different air handling units.
2. A relief fan shall be enabled when its associated supply fan is proven on, and shall be disabled otherwise.
3. Building static pressure shall be time averaged with a sliding 5 minute window (to dampen fluctuations). The averaged value shall be that displayed and used for control.
4. A P-only control loop maintains the building pressure at a setpoint of 0.05 inches with an output ranging from 0 to 100%. The loop is disabled and output set to zero when all fans in the relief system group are disabled.
   - 4.1. Stage 0 (barometric relief): When relief system is enabled and the control loop output is above 5%, open the motorized dampers to all relief fans serving the relief system group that are enabled; close the dampers when the loop output drops to 0% for 5 minutes.
   - 4.2. Stage Up: When control loop is above minimum speed plus 15%, enable relief fans.
   - 4.3. Stage Down: When control loop is below minimum speed disable relief fans. If all fans are off go to Stage 0 (all dampers open and all fans off).
5. For fans in a Level 2 alarm and status is off, discharge damper shall be closed when stage is above Stage 0.

AHU SEQUENCE OF OPERATION CON'T

Freeze Protection:

1. If the leaving pre-heat coil air temperature drops below 40°F for 5 minutes, send two (or more, as required to ensure that heating plant is active) Hot Water Requests, override the outside air damper to the minimum position, and modulate the pre-heat coil to maintain a leaving pre-heat coil air temperature of at least 42°F. Disable this function when leaving pre-heat coil air temperature rises above 45°F for 5 minutes.
2. If the leaving pre-heat coil air temperature drops below 38°F for 5 minutes, fully close the outdoor air damper for one hour, and set a Level 3 alarm noting that minimum ventilation was interrupted. After one hour, the unit shall resume minimum outdoor air ventilation and enter the previous stage of freeze protection (see 0).
3. Upon signal from the freezestat or if supply air temperature drops below 38°F for 15 minutes or below 34°F for 5 minutes, shut down supply and return/relief fan(s), close outdoor air damper, make the minimum cooling coil valve position 20%, and energize the hot water and chilled water pump systems. Also send two (or more, as required to ensure that heating plant is active) Hot Water Requests, modulate the heating coil to maintain the higher of the supply air temperature or the mixed air temperature at 80°F, and set a Level 2 alarm indicating the unit is shut down by freeze protection.
   - 3.1. If a freeze protection shutdown is triggered by a low air temperature sensor reading, it shall remain in effect until it is reset by a software switch from the operator's workstation. (If a freeze stat with a physical reset switch is used instead, there shall be no software reset switch.)

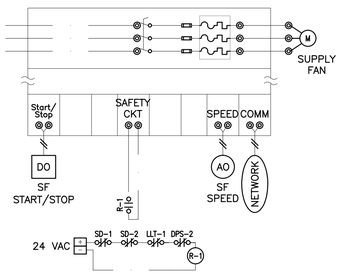
Safeties and Interlocks:

1. Supply fan shall be hardwire interlocked through the unit smoke detector(s), low-limit thermostat and high static pressure switch to shut down the unit upon smoke detection.

EMCS Alarms: Provide the following EMCS alarms:

1. Maintenance interval alarm when unit has operated for more than 1500 hours: Level 5. Reset interval counter when alarm is acknowledged.
2. Fan alarm is indicated by the status being different from the command for a period of 60 seconds.
   - 2.1. Commanded on, status off: Level 2
   - 2.2. Commanded off, status on: Level 4
3. Filter pressure drop exceeds alarm limit: Level 5. The alarm limit shall vary with fan speed as follows:

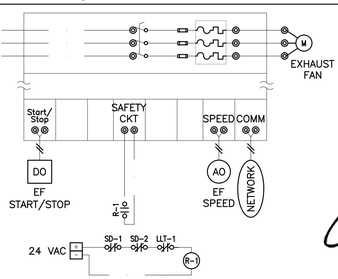
$$DPx = DP100(x)^{1.4}$$



Where DP100 is the high limit pressure drop at design cfm (determine limit from filter manufacturer) and DPx is the high limit at speed signal x (expressed as a fraction of full signal). For instance, the setpoint at 50% of full speed would be (0.5)^1.4 or 38% of the design high limit pressure drop.

4. High supply air temperature (more than 5 °F above setpoint) when control loop is active for longer than 15 minutes: Level 3.
5. If the outside air temperature is above the supply air temperature setpoint and the economizer is enabled and the mixed air temperature is more than 2 °F different from the outside air temperature for more than 30 minutes continuously; OR if the outdoor air temperature is more than 5 °F below the supply air temperature setpoint and the chilled water valve is open: Level 4 indicating economizer damper control problems.
6. Low static pressure (more than 0.25 inches below setpoint) when fan control loop is active for longer than 5 minutes: Level 3.
7. High building pressure (more than 0.1") for 5 minutes. Level 3.
8. Low building pressure (less than 0.0") for 5 minutes. Level 4.
9. Outdoor airflow less than setpoint by 10% for 10 minutes when loop is active: Level 3.

Testing/Commissioning Overrides: Provide software points that interlock to a chilled water and hot water plant level point to:



Force chilled water valve full open.
Force chilled water valve full closed.
Force hot water valve full open.
Force hot water valve full closed.

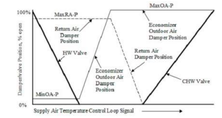
AHU SEQUENCE OF OPERATION

General: Variable Air Volume (VAV) Air Handling Unit (AHU) with pre-heat coil, chilled water coil, reh-heat coil, supply fan(s), exhaust/relief fan(s).

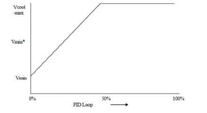
AHU System Modes: AHU system modes are the same as the mode of the Zone Group served by the system. When Zone Groups served by an air handling system are in different modes, the following hierarchy applies (highest one sets AHU mode):



1. Occupied mode
2. Cool-down mode
3. Setup mode
4. Warm-up mode
5. Setback mode
6. Unoccupied mode

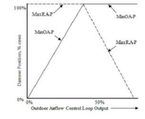
Design airflow rates shall be as scheduled on plans:

1. Zone maximum cooling airflow setpoint (Vcool-max)
2. Zone maximum heating airflow setpoint (Vheat-max)



Supply Fan Control:

1. Supply Fan Start/Stop
   - 1.1. AHU supply fan(s) shall run when system is in any mode other than Unoccupied Mode.
   - 1.2. Fan VFD's shall be hard-wire interlocked through smoke detectors and low mixed air temperature safety relay mounted in the control panel in each AHU control panel. The relay energizes when smoke detector auxiliary contacts are energized or the low-limit thermostat tripped, locking out the fans until they are reset by the reset DO point or a push button on the panel face. A pilot light on the panel face indicates static pressure safety lockout is in effect.
2. Supply Fan Speed Control
   - 2.1. Provide a ramp function to prevent changes in fan speed of more than 10% per minute (adjustable).
   - 2.2. When the supply fan is proven on, fan speed and supply air temperature setpoints are controlled as described below.
     - 2.2.1. Heating Mode:
       - 2.2.1.1. Fan control: For a Heating Loop signal of 100% – 51%, fan speed is reset from the maximum heating fan speed to the minimum fan speed. For a Heating Loop signal of 50% – 0%, fan speed setpoint is the minimum fan speed.
       - 2.2.1.2. Supply air temperature control: For a Heating Loop signal of 100% – 51%, Supply Air Temperature Setpoint (SATsp) is at its maximum value. For a Heating Loop signal of 50% – 0%, SATsp is reset from the maximum value of SATsp to the Deadband value.
     - 2.2.2. Deadband Mode:
       - 2.2.2.1. Fan control: In Deadband, fan speed setoint is the minimum fan speed.
       - 2.2.2.2. Supply air temperature control: In Deadband, SATsp equals 55°F (adjustable).
     - 2.2.3. Cooling Mode:
       - 2.2.3.1. Fan control: For a Cooling Loop signal of 0% – 100%, fan speed is reset from minimum fan speed to maximum cooling fan speed.
       - 2.2.3.2. Supply air temperature control: For a Cooling Loop signal of 0% – 100%, SATsp equals 55°F (adjustable).
     - 2.2.4. Dehumidification Mode:
       - 2.2.4.1. Dehumidification mode shall be enabled when zone relative humidity is greater than 60% RH for more than 20 minutes.
       - 2.2.4.2. Dehumidification mode shall be disabled when zone relative humidity is less than 55% RH for more than 20 minutes.
       - 2.2.4.3. Fan control: Fan shall be controlled same as Heating, Deadband and Cooling control described above.
       - 2.2.4.4. Supply air temperature control: Chilled water control valve shall be fully open in each of the following control modes.
         - 2.2.4.4.1. Heating control: SATsp shall be controlled same as heating described above.
         - 2.2.4.4.2. Deadband control: Uncontrolled.
         - 2.2.4.4.3. Cooling control: Uncontrolled.
       - 2.2.4.5. Note: When system is in the Dehumidification mode, the zone temperature setpoint shall be equal to the Occupied Cooling setpoint.
   - 2.3. Minimum and maximum fan speeds shall be as follows:
     - 2.3.1. Minimum fan speed shall be the speed, determined in conjunction with the TAB Agency, that provides supply airflow equal to minimum airflow scheduled on Construction Drawings.
     - 2.3.2. In Heating, maximum fan speed shall be the speed, determined in conjunction with the TAB Agency, that provides supply airflow equal to the design heating airflow scheduled on Construction Drawings.
     - 2.3.3. In Cooling, maximum fan speed shall be the speed , determined in conjunction with the TAB Agency, that provides supply airflow equal to the design cooling airflow scheduled on Construction Drawings.
     - 2.3.4. In Dehumidification, maximum and minimum fan speed shall be same as heating and cooling described above.
   - 2.4. Minimum and maximum supply air temperature setpoints shall be as follows:
     - 2.4.1. In Heating the maximum value of SATsp shall be the lesser of 95°F or 20°F above space temperature.
     - 2.4.2. In Deadband and Cooling SATsp shall be 55°F (adjustable).
     - 2.4.3. In Dehumidification chilled water control valve fully open, the maximum value of SATsp shall be the lesser of 85°F or 20°F above space temperature.
   - 2.5. Supply Air Temperature Control:
     - 2.5.1. The SATsp control loop is enabled when the supply air fan is proven on, and disabled and set to Neutral otherwise.
     - 2.5.2. Supply air temperature shall be controlled to setpoint using a PID loop whose output is mapped to sequence the hot water valve, economizer/outdoor air damper, return air damper, and chilled water valve as shown in the diagram below. Outdoor air and return air dampers are sequenced rather than complementary (as per most standard sequences) to reduce fan power at part loads.
       - 2.5.2.1. For units with a single common minimum outdoor air and economizer damper: MaxRA–P and MinOA–P are modulated to control minimum outdoor air volume. as described below.
       - 2.5.2.2. The points of transition along the x–axis show and described below are representative. Separate gains shall be provided for each section of the control map (hot water, economizer, chilled water), that are determined by the Contractor to provide stable control. Alternatively, Contractor shall adjust the precise value of the x–axis thresholds shown in the figure to provide stable control.



Economizer/Outdoor Air Damper Control:

1. Minimum Outdoor Air Control Loop:
   - 1.1. During Occupied Mode, a P–only loop shall maintain CO2 concentration at 1000 ppm; reset 0% at 800 ppm and 100% at 1000 ppm of CO2. The output of this loop (0 to 100%) shall be mapped as shown below. The loop output from 0 to 50% shall reset the minimum airflow setpoint to the zone from Vmin up to maximum cooling airflow setpoint Vcool–max. The loop output from 50% to 100% will be used at the system level to reset outdoor air minimum; see AHU controls. Loop is disabled and output set to zero when the zone is not in Occupied Mode.

   - 1.2. Minimum outdoor air control loop is enabled when the supply fan is proven on and the AHU is in Occupied Mode and disabled and output set to zero otherwise.
   - 1.3. The outdoor airflow rate shall be maintained at the minimum outdoor air setpoint MinOAsp by a reverse–acting control loop whose output is mapped to economizer damper minimum position, MinOA–P, and return air damper maximum position, MaxRA–P, as indicated in the figure below.

AHU SEQUENCE OF OPERATION CON'T

   - 1.4. Economizer High Limit Lockout:
     - 1.4.1. The normal sequencing of the economizer dampers (above) shall be disabled when TOA > 65°F.
     - 1.4.2. When economizer is enabled, MaxOA–P = 100%.
     - 1.4.3. Once the economizer is disabled, it shall not be re–enabled within 10 minutes, and vice versa.
     - 1.4.4. When the economizer is disabled:
       - 1.4.4.1. Return air damper shall be fully opened.
       - 1.4.4.2. Wait 15 seconds, then set MaxOA–P equal to MinOA–P.
       - 1.4.4.3. Wait 3 minutes, then release return air damper for minimum outdoor air control.

Exhaust/Relief Fan Control:

1. All operating relief fans that serve a common/shared air volume shall be grouped and controlled as if they were one system, running at the same speed and using the same control loop, even if they are associated with different air handling units.
2. A relief fan shall be enabled when its associated supply fan is proven on, and shall be disabled otherwise.
3. Building static pressure shall be time averaged with a sliding 5 minute window (to dampen fluctuations). The averaged value shall be that displayed and used for control.
4. A P–only control loop maintains the building pressure at a setpoint of 0.05 inches with an output ranging from 0 to 100%. The loop is disabled and output set to zero when all fans in the relief system group are disabled.
   - 4.1. Stage 0 (barometric relief): When relief system is enabled and the control loop output is above 5%, open the motorized dampers to all relief fans serving the relief system group that are enabled; close the dampers when the loop output drops to 0% for 5 minutes.
   - 4.2. Stage Up: When control loop is above minimum speed plus 15%, enable relief fans.
   - 4.3. Stage Down: When control loop is below minimum speed disable relief fans. If all fans are off go to Stage 0 (all dampers open and all fans off).
5. For fans in a Level 2 alarm and status is off, discharge damper shall be closed when stage is above Stage 0.

Freeze Protection:

1. If the leaving pre–heat coil air temperature drops below 40°F for 5 minutes, send two (or more, as required to ensure that heating plant is active) Hot Water Requests, override the outside air damper to the minimum position, and modulate the pre–heat coil to maintain a leaving pre–heat coil air temperature of at least 42°F. Disable this function when leaving pre–heat coil air temperature rises above 45°F for 5 minutes.
2. If the leaving pre–heat coil air temperature drops below 38°F for 5 minutes, fully close the outdoor air damper for one hour, and set a Level 3 alarm noting that minimum ventilation was interrupted. After one hour, the unit shall resume minimum outdoor air ventilation and enter the previous stage of freeze protection (see 0).
3. Upon signal from the freezestat or if supply air temperature drops below 38°F for 15 minutes or below 34°F for 5 minutes, shut down supply and return/relief fan(s), close outdoor air damper, make the minimum cooling coil valve position 20%, and energize the hot water and chilled water pump systems. Also send two (or more, as required to ensure that heating plant is active) Hot Water Requests, modulate the heating coil to maintain the higher of the supply air temperature or the mixed air temperature at 80°F, and set a Level 2 alarm indicating the unit is shut down by freeze protection.
   - 3.1. If a freeze protection shutdown is trigsered by a low air temperature sensor reading, it shall remain in effect until it is reset by a software switch from the operator's workstation. (If a freeze stat with a physical reset switch is used instead, there shall be no software reset switch.)

Safeties and Interlocks:

1. Supply fan shall be hardwire interlocked through the unit smoke detector(s), low–limit thermostat and high static pressure switch to shut down the unit upon smoke detection.

EMCS Alarms: Provide the following EMCS alarms:

1. Maintenance interval alarm when unit has operated for more than 1500 hours: Level 5. Reset interval counter when alarm is acknowledged.
2. Fan alarm is indicated by the status being different from the command for a period of 60 seconds.
   - 2.1. Commanded on, status off: Level 2
   - 2.2. Commanded off, status on: Level 4
3. Filter pressure drop exceeds alarm limit: Level 5. The alarm limit shall vary with fan speed as follows:

$$DPx = DP100(x)^{1.4}$$

Where DP100 is the high limit pressure drop at design cfm (determine limit from filter manufacturer) and DPx is the high limit at speed signal x (expressed as a fraction of full signal). For instance, the setpoint at 50% of full speed would be (0.5)^1.4 or 38% of the design high limit pressure drop.

4. High supply air temperature (more than 5 °F above setpoint) when control loop is active for longer than 15 minutes: Level 3.
5. If the outside air temperature is above the supply air temperature setpoint and the economizer is enabled and the mixed air temperature is more than 2 °F different from the outside air temperature for more than 30 minutes continuously; OR if the outdoor air temperature is more than 5 °F below the supply air temperature setpoint and the chilled water valve is open: Level 4 indicating economizer damper control problems.
6. Low static pressure (more than 0.25 inches below setpoint) when fan control loop is active for longer than 5 minutes: Level 3.
7. High building pressure (more than 0.1") for 5 minutes. Level 3.
8. Low building pressure (less than 0.0") for 5 minutes. Level 4.
9. Outdoor airflow less than setpoint by 10% for 10 minutes when loop is active: Level 3.

Testing/Commissioning Overrides: Provide software points that interlock to a chilled water and hot water plant level point to:

Force chilled water valve full open.
Force chilled water valve full closed.
Force hot water valve full open.
Force hot water valve full closed.

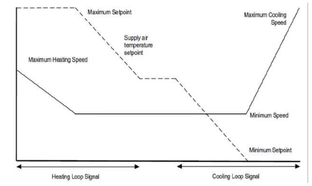
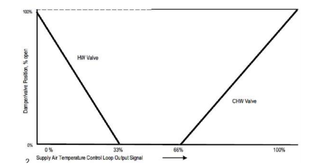
2 M7.4 VARIABLE SPEED 4–PIPE FAN COIL CONTROL SCHEMATIC

NO SCALE



FCU SEQUENCE OF OPERATION

General: Variable speed 4–pipe fan coil unit.



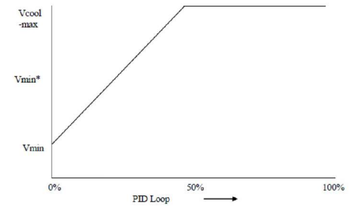
FCU System Modes: AHU system modes are the same as the mode of the Zone Group served by the system.

Supply Fan Control:

1. Supply Fan Start/Stop
   1.1. FCU supply fan shall run when system is in any mode other than Unoccupied Mode.
2. Supply Fan Speed and Supply Air Temperature Setpoint Control:
   2.1. When supply fan is proven on, heating, cooling, and fan speed shall be controlled as follows:

   2.1.1. Maximum cooling speed is that required to deliver design airflow to the zone; coordinate with air balancer. Minimum speed shall be 30% (adjustable) of maximum cooling speed.
   2.1.2. When the zone served by the system is in the Deadband Mode, supply air temperature setpoint shall be average of the active heating and cooling setpoints and the fan shall operate at minimum speed.
   2.1.3. When the zone served by the system is in the Cooling Mode, supply air temperature shall be reset from Deadband setpoint at 0% cooling PID signal down to Minimum Setpoint T–min at 50% PID signal. T–min shall be 53°F (adjustable). Fan speed shall be reset from minimum speed at 50% cooling PID signal and below, proportionally up to maximum cooling speed at 100% cooling PID signal.
   2.1.4. When the zone served by the system is in the Heating Mode, supply air temperature shall be reset from Deadband setpoint at 0% heating PID signal up to 90°F (adjustable) at 50% PID signal. Fan speed shall be reset from minimum speed at 50% heating PID signal and below, proportionally up to maximum heating speed at 100% heating PID signal.
   2.2. Supply Air Temperature Control:
   2.2.1. Control loop is enabled when the supply air fan is proven on and disabled and output set to zero otherwise. When loop is disabled, slowly reduce loop output to zero to prevent sudden pressure changes in the CHW flow distribution system.
   2.2.2. Supply air temperature shall be controlled to setpoint using a PID loop whose output is the chilled water valve and hot water valve positions as shown in the figure below:

3. Alarms
   3.1. Maintenance interval alarm when unit has operated for more than 1500 hours: Level 5. Reset interval counter when alarm is acknowledged.
   3.2. Fan alarm is indicated by the status being different from the command for a period of 60 seconds.
      3.2.1. Commanded on, status off: Level 2.
      3.2.2. Commanded off, status on: Level 4.
   3.3. High supply air temperature (more than 5°F above setpoint) when cooling control loop is active for longer than 15 minutes: Level 3.
   3.4. Low supply air temperature (more than 5°F below setpoint) when heating control loop is active for longer than 15 minutes: Level 3.
4. Testing/Commissioning Overrides: Provide software points that interlock to a chilled water plant level to:
   4.1. Force chilled water valve full open.
   4.2. Force chilled water valve full closed.
   4.3. Force heating water valve full open.
   4.4. Force heating water valve full closed.
5. Plant Requests
   5.1. Heating HWST Reset Requests.
      5.1.1. If the HW valve is less than 85%, send 0 requests.
      5.1.2. If the HW valve is greater than 95%, send 1 request.
      5.1.3. If the supply air temperature is below setpoint sufficient to generate a Level 3 alarm (see alarms above), send 2 requests.



AHU HARDWIRED POINTS LIST

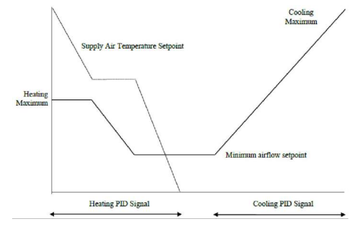
Zone Temperature Setpoint Adjustment	AI	TS–3C	15 min	60 min	–

VAV TERMINAL UNIT SEQUENCE OF OPERATION

General: Variable Air Volume (VAV) Terminal Unit with hot water reheat.



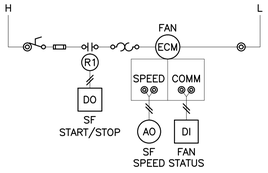
1. See Sequence of Operation – General for setpoints, loops, control modes, alarms, etc.
2. Design airflow rates shall be as scheduled on plans:
   2.1. Zone maximum cooling airflow setpoint (Vcool–max).
   2.2. Zone minimum airflow setpoint (Vmin).
   2.3. Zone maximum heating airflow setpoint (Vheat–max).
   2.4. Zone occupant component of minimum outdoor air setpoint (Voc–min).
   2.5. Zone building area component of minimum outdoor air setpoint (Vora–min).
3. Zone minimum outdoor air setpoints (used at AHU level minimum outdoor air controls).
   3.1. Zone–Abs–OA–min is equal to:
      3.1.1. Vora–min if the zone has a CO2 sensor.
      3.1.2. Zone–Des–OA–min otherwise.
   3.2. Zone–Des–OA–min is equal to the larger of Vora–min and Voc–min.
4. The occupied minimum Vmin* shall be equal to Vmin except as follows:
   4.1. If Vmin is non–zero and less than the lowest possible airflow setpoint allowed by the controls (Vm), Vmin* shall be set equal to Vm determined in accordance with the Sequence of Operation – General (VAV Box Controllable Minimum).
   4.2. If the zone has a CO2 sensor, during Occupied Mode, a P–only loop shall maintain CO2 concentration at 1000 ppm; reset 0% at 800 ppm and 100% at 1200 ppm of CO2. The output of this loop (0 to 100%) shall be mapped as shown below. The loop output from 0 to 50% shall reset the minimum airflow setpoint to the zone from Vmin up to maximum cooling airflow setpoint Vcool–max. The loop output from 50% to 100% will be used at the system level to reset outdoor air minimum; see AHU controls. Loop is disabled and output set to zero when the zone is not in Occupied Mode.

5. Active maximum and minimum setpoints shall vary depending on the mode of the Zone Group the zone is a part of:

Setpoint	Occupied	Cool–down	Setup	Warm–up	Setback	Unoccupied
Cooling maximum	Vcool–max	Vcool–max	Vcool–max	0	0	0
Minimum	Vmin*	0	0	0	0	0
Heating Maximum	Max(Vheat–max, Vmin*)	Vheat–max	0	Vcool–max	Vcool–max	0

6. Control logic is depicted schematically in the figure below and described in the following sections.

   6.1. When the zone is in the Cooling Mode, the Cooling Loop output shall be mapped to the airflow setpoint from the cooling maximum to the minimum airflow setpoints.
   6.2. When the zone is in the Deadband Mode, the airflow setpoint shall be the minimum airflow setpoint.
   6.3. When the zone is in the Heating mode, the Heating Loop shall be mapped as follows:
      6.3.1. From 0–33%, the Heating Loop output shall reset the discharge temperature from 50°F to 95°F.
      6.3.2. From 33–66%, the Heating Loop output shall reset the zone airflow setpoint from the minimum airflow setpoint to the maximum heating airflow setpoint.
      6.3.3. From 66–100%, the Heating Loop output shall reset the discharge temperature from 95°F to 115°F.
   6.4. The hot water valve shall be modulated using P+I loop to maintain the discharge temperature at setpoint. (Directly controlling HW valve off zone temperature PID loop is not acceptable.)
   6.5. The VAV damper shall be modulated to maintain the measured airflow at setpoint.
7. Alarms:
   7.1. Low airflow:
      7.1.1. If the measured airflow is less than 70% of setpoint for 5 minutes, generate a Level 3 alarm.
      7.1.2. If the measured airflow is less than 50% of setpoint for 5 minutes, generate a Level 2 alarm.
      7.1.3. Suppress alarms for zones with an Importance Multiplier of 0.
   7.2. Low supply air temperature:
      7.2.1. If boiler plant is proven on and the supply air temperature is 15°F less than setpoint for 10 minutes, generate a Level 3 alarm.
      7.2.2. If boiler plant is proven on and the supply air temperature is 30°F less than setpoint for 10 minutes, generate a Level 2 alarm.
   7.3. Airflow sensor calibration. If the fan serving the zone has been shut off for 10 minutes and airflow sensor reading is above 20 cfm, generate a Level 3 alarm.
8. Testing/Commissioning Overrides: Provide software points that interlock to a system level point to:
   8.1. Force zone airflow setpoint to zero.
   8.2. Force zone airflow setpoint to Vcool–max.
   8.3. Force zone airflow setpoint to Vmin.
   8.4. Force zone airflow setpoint to Vheat–max.
   8.5. Force damper full closed/open.
   8.6. Force heating to off/closed.
   8.7. Reset request–hours accumulator point to zero (provide one point for each reset type listed below).



VAV TERMINAL UNIT SEQUENCE OF OPERATION

9. System Requests:
   9.1. Cooling SAT Reset Requests:
      9.1.1. If the Cooling Loop is less than 85%, send 0 requests.
      9.1.2. If the Cooling Loop is greater than 95%, send 1 request.
      9.1.3. If the zone temperature exceeds the zone's cooling setpoint by 3°F for 2 minutes, send 2 requests.
      9.1.4. If the zone temperature exceeds the zone's cooling setpoint by 5°F for 2 minutes, send 3 requests.
   9.2. Static Pressure Reset Requests:
      9.2.1. If the Damper Loop is less than 85%, send 0 requests.
      9.2.2. If the Damper Loop is greater than 95%, send 1 request.
      9.2.3. If the measured airflow is less than 70% of setpoint for 1 minute, send 2 requests.
      9.2.4. If the measured airflow is less than 50% of setpoint for 1 minute, send 3 requests.
   9.3. Heating HWST Reset Requests:
      9.3.1. If the HW valve is less than 85%, send 0 requests.
      9.3.2. If the HW valve is greater than 95%, send 1 request.
      9.3.3. If the supply air temperature is 15°F less than setpoint for 5 minutes, send 2 requests.
      9.3.4. If the supply air temperature is 30°F less than setpoint for 5 minutes, send 3 requests.
   9.4. Boiler Plant Requests. Send the boiler plant that serves the zone a Boiler Plant Request as follows:
      9.4.1. If the HW valve is less than 10% send 0 requests.
      9.4.2. If the HW valve is greater than 95%, send 1 request.

HW SYSTEM SEQUENCE OF OPERATION

General: HW system with condensing boilers and variable speed pumps.

1. For boilers, convert firing rate (valve position or other indicator per mfr's recommendations) from boiler controller to % load. Display % load on boiler graphic as well as valve position (or other % load indicator used).
2. Boilers and hot water pumps shall be lead/lag alternated as described in Sequence of Operations – General.
3. Lead boiler and pump.
   - 3.1. The lead system shall be enabled if there are more than 3 (adjustable) Boiler Plant Requests from zones or air handlers for more than 10 minutes (adjustable).
   - 3.2. The lead system shall be disabled if it has run at least 10 minutes and there are no Boiler Plant Requests from zones or air handlers for more than 10 minutes (adjustable).
4. Lag boiler and pump.
   - 4.1. The lag system shall be enabled if:
     - 4.1.1. The lead boiler is enabled and its firing rate exceeds [2 * boiler minimum firing rate + 20%] for 10 minutes. Boiler firing rate shall be passed though network. Minimum firing rate shall be per manufacturer's submittal.
   - 4.2. The lag system shall be disabled if:
     - 4.2.1. The lead system is disabled or,
     - 4.2.2. The lag system has run at least 10 minutes and the average boiler firing rate is less than minimum.
5. When the lead system is enabled, first start the lead pump and simultaneously open the boiler isolation valve, then after 30 seconds, enable the boiler. When the lead system is disabled, first disable the boiler, then after 3 minutes turn off the lead pump and simultaneously close the boiler isolation valve. Use similar logic for the lag system.
6. Pumps speed shall be controlled by a PID loop maintaining the differential pressure signal at a setpoint determined in conjunction with Work performed under Section 230593 Testing, Adjusting, and Balancing. All active pumps receive the same speed signal.
7. Hot Water Supply Temperature Reset:
   - 7.1. Hot water supply temperature setpoint shall be reset using Trim & Respond logic (see Sequence of Operation – General) based on hot water pump status with the following parameters:

Variable	Value
Device	HWS temperature
SP0	SPmax
SPmin	90°F
SPmax	140°F
Td	10 minutes
T	5 minutes
I	2
R	Heating HWST Reset Requests
SPtrim	-2°F
SPres	+3°F
SPres-max	+7°F

8. Boiler efficiency shall be calculated for each boiler from the following:
   - 8.1. Convert measured gas usage to Btu/h by a user adjustable conversion factor (default value = 1000 Btu/h per cubic feet of gas; acutal value set by user from utility bill).
   - 8.2. Calculate load from flow and temperature difference (HWS temperature minus HWR temperature).

     QE = 490*GPMs*(HWS temp – HWR temp)

   - 8.3. Thermal efficiency is equal to measured load divided by measured gas consumption.
   - 8.4. Calculate predicted thermal efficiency.

     Qpart-load = GD (0.0634 + 0.7856*PLR + 0.1534*PLR^2)

     - 8.4.1. Where GD is the design gas flow rate and PLR is the measured load divided by the design load. See schedules for design load and gas rate.
   - 8.5. Summary Data. For each boiler, statistics shall be calculated and displayed on associated graphic for runtime, peak load, energy use, average actual efficiency, average predicted efficiency, and average load (flow rate, MBH, etc.), all summarized on an instantaneous (displaying real-time data), year-to-date, and last year basis.
9. Emergency Shutdown.
   - 9.1. Boilers shall be hardwire interlocked with the Boiler Emergency Shutdown Switch. Upon activation of the Boiler Emergency Shutdown Switch, the boilers shall be disabled and an alarm generated, Level 1.
10. Alarms.
    - 10.1. Maintenance interval alarm when pump has operated for more than 1500 hours: Level 5. Reset interval counter when alarm is acknowledged.
    - 10.2. Maintenance interval alarm when boiler has operated for more than 2000 hours: Level 5. Reset interval counter when alarm is acknowledged.
    - 10.3. Boiler alarm: Level 2.
    - 10.4. Low boiler leaving hot water temperature (more than 15F below setpoint) for more than 15 minutes when boiler has been enabled for longer than 15 minutes: Level 3.
    - 10.5. Pump alarm is indicated by the status input being different from the output command after a period of 15 seconds after a change in output status.
      - 10.5.1. Commanded on, status off: Level 2.
      - 10.5.2. Commanded off, status on: Level 4.
    - 10.6. HW System low differential pressure: Level 2 alarm if HW system differential pressure falls below 0.75 times the differential pressure setpoint for more than 15 minutes.

1 / M7.6 CHW SYSTEM CONTROL SCHEMATIC
NO SCALE

CHW SYSTEM SEQUENCE OF OPERATION

General: CHW system with air-cooled chillers and variable speed pumps.

1. Chillers and chilled water pumps shall be lead/lag alternated as described in Sequence of Operations – General.
2. Lead chiller and pump.
   - 2.1. The lead chilled water system shall be enabled if there are more than 2 (adjustable) Chiller Plant Requests from zones or air handlers for more than 10 minutes (adjustable).
   - 2.2. The lead chilled water system shall be disabled if it has run at least 10 minutes and there are no Chiller Plant Requests from zones or air handlers for more than 10 minutes (adjustable).
3. Lag chiller and pump.
   - 3.1. The lag chilled water system shall be enabled if:
     - 3.1.1. The lead chiller is enabled and the Chilled Water Supply Temperature (CHWST) is greater than 3°F above setpoint for 10 minutes.
   - 3.2. The lag chilled water system shall be disabled if:
     - 3.2.1. The lead chilled water system is disabled or,
     - 3.2.2. The lag chilled water system has run at least 10 minutes and the calculated Chiller Plant load is < 40% of total plant capacity for 15 minutes.
4. When a chilled water system is enabled via the chiller BACnet interface, the BAS shall perform the following:
   - 4.1. Command open the chiller isolation valve. After 30 seconds, enable the chiller.
   - 4.2. Upon receiving pump request from chiller control panel, the lead chilled water pump shall be started.
   - 4.3. Once the chiller has proven flow through the evaporator, the chiller shall begin its startup sequence and operate subject to its own internal controls and safeties.
5. When a chilled water system is disabled, first disable the chiller, then after 3 minutes turn off the lead pump and simultaneously close the chiller isolation valve.
6. Pumps speed shall be controlled by a reverse acting PID loop maintaining the differential pressure signal at the setpoint. Differential pressure setpoint shall be determined within the range of 1 psi to DP–MAX by a slow direct–acting control loop whose control point is the position of the most open valve and whose setpoint is 90% open. In other words, the DP setpoint is reset to maintain the valve requiring the most differential pressure at 90% open. DP–MAX is the design DP setpoint determined in conjunction with Work performed under Section 230593 Testing, Adjusting, and Balancing. All active pumps receive the same speed signal.
7. Chilled Water Supply Temperature Control:
   - 7.1. CHWST shall be controlled to its setpoint (ajustable from BACnet interface and locally at chiller control panel). CHWST initial setpoint shall be 42°F (ajustable).
   - 7.2. Calculate load from flow and temperature difference (CHWS temperature minus CHWR temperature).
8. Alarms.
   - 8.1. Maintenance interval alarm when pump has operated for more than 1500 hours: Level 5. Reset interval counter when alarm is acknowledged.
   - 8.2. Maintenance interval alarm when chiller has operated for more than 2000 hours: Level 5. Reset interval counter when alarm is acknowledged.
   - 8.3. Chiller alarm: Level 2.
   - 8.4. High chiller leaving chilled water temperature (more than 5°F above setpoint) for more than 10 minutes when chiller has been enabled for longer than 15 minutes: Level 3.
   - 8.5. Pump alarm is indicated by the status input being different from the output command after a period of 15 seconds after a change in output status.
     - 8.5.1. Commanded on, status off: Level 2.
     - 8.5.2. Commanded off, status on: Level 4.
   - 8.6. CHW System low differential pressure: Level 2 alarm if CHW system differential pressure falls below 0.75 times the differential pressure setpoint for more than 15 minutes.

LAB EXHAUST FAN SEQUENCE OF OPERATION

General: Constant volume laboratory exhaust fan fully controlled by the BAS.

1. See Sequence of Operation – General for setpoints, loops, control modes, alarms, etc.
2. Start/Stop: BAS open the fan isolation damper and after 30 seconds shall enable the exhaust fan. The fan remain enabled 24/7 (adjustable).
3. Proof: BAS shall prove fan operation and use the status indication to accumulate runtime.
4. VFD Control: Fan speed shall be set to the speed corresponding to the fan's design exhaust air flow rate. This fan speed shall be determined in conjunction with Work performed under 230593 Testing, Adjusting, and Balancing.
5. Bypass Damper Control: The fan bypass damper shall be controlled by a PID loop maintaining the exhaust duct differential pressure signal at a setpoint determined in conjunction with Work performed under 230593 Testing, Adjusting, and Balancing.
6. Alarms:
   - 6.1. Generate a Level 5 maintenance alarm when fan has operated for more than 3000 hours. Reset interval counter when alarm is acknowledged.
   - 6.2. BAS shall monitor VFD alarms through the VFD BACnet interface. Generate a Level 2 alarm when active.
   - 6.3. Fan alarm is indicated by the status input being different from the output command after a period of 15 seconds after a change in output status.
     - 6.3.1. Commanded on, status off: Level 2.
     - 6.3.2. Commanded off, status on: Level 4.

ATRIUM SMOKE EVACUATION SEQUENCE OF OPERATION

General: Sequence describes the Atrium smoke evacuation system control. Smoke evacuation system shall be fully controlled by a UL 864 compliant Building Automation System (BAS). The smoke evacuation BAS system components shall be dedicated to the smoke evacuation only per UL 864. Smoke evacuation BAS shall be integrated into the overall BAS.

1. Smoke Evacuation Initiated by Fire Alarm Control Panel (FACP).
   - 1.1. Upon detection of smoke by the Atrium smoke detectors, the FACP shall enable the smoke evacuation system.
   - 1.2. Upon receiving an enable signal from the FACP the smoke evacuation BAS shall open the smoke dampers (both make-up air and exhaust air smoke dampers).
   - 1.3. After 30 seconds (adjustable) the smoke evacuation fans shall be enabled.
   - 1.4. Smoke evacuation system shall run until either disabled by the FACP or overrided by the Fireman's Smoke Control Station (FSCS).
2. Smoke Evacuation System Control by Fireman's Smoke Control Station (FSCS).
   - 2.1. FSCS shall fully comply with UL 864.
   - 2.2. The smoke evacuation system (all components; fans and smoke dampers) shall be fully controllable via the FSCS.
   - 2.3. Each fan and smoke damper shall be controllable by a On-Auto-Off switch installed in the FSCS.
   - 2.4. FSCS shall have a Fireman's key switch (Panel Enable Switch) to limit access to the operation of system.
   - 2.5. Exhaust fans shall be manually controllable (start/stop) from FSCS.
   - 2.6. Smoke dampers shall be manually controllable (open/close) from FSCS.
   - 2.7. BAS shall provide feedback of all points listed to FSCS.
3. Alarms:
   - 3.1. Generate a Level 1 alarm when fan is enabled for any source (FACP or FSCS).
   - 3.2. Fan alarm is indicated by the status input being different from the output command after a period of 15 seconds after a change in output status.
     - 3.2.1. Commanded on, status off: Level 1.
     - 3.2.2. Commanded off, status on: Level 1.

CRAC UNIT SEQUENCE OF OPERATION

General: Computer Room Air Conditioning (CRAC) Unit. EMCS shall monitor CRAC unit's hardwired and network points for diagnostic purposes. All alarms shall be displayed at the OWS.

1. CRAC unit shall be controlled by it's internal controller and shall run subject to it's own internal safeties.
2. Alarms:
   - 2.1. Generate a Level 5 maintenance alarm when unit has operated for more than 5000 hours. Reset interval counter when alarm is acknowledged.

ELECTRICAL LEGEND

GENERAL NOTES

1. ALL EQUIPMENT AND DEVICES ARE TO BE FLUSH MOUNTED UNLESS OTHERWISE NOTED.
2. DEVICES NOTED AS "GFI" SHALL BE GROUND FAULT CIRCUIT INTERRUPTING DEVICES.
3. DEVICES NOTED AS "WP" SHALL BE WEATHERPROOF WHILE-IN-USE.
4. DEVICES NOTED AS "DL" SHALL BE RATED FOR DAMP LOCATION.
5. DEVICES NOTED AS "NL" SHALL BE NIGHT LIGHTS. PROVIDE UNSWITCHED POWER TO FIXTURE.
6. DEVICES NOTED AS "WG" SHALL BE PROVIDED AND INSTALLED WITH A WIRE GUARD.
7. DEVICES NOTED AS "TR" SHALL BE TAMPER RESISTANT.
8. PROVIDE UNSWITCHED POWER TO EMERGENCY BATTERY PACKS.

LUMINAIRES (See Light Fixture Schedule)

NOTE: THE NUMBER INSIDE THE CIRCLE IS THE CIRCUIT NUMBER. THE LETTER BESIDE THE SYMBOL IS THE FIXTURE TYPE DESCRIBED IN THE LIGHT FIXTURE SCHEDULE.

- 2'X2' RECESSED FIXTURE.
- 2'X4' RECESSED FIXTURE.
- 1'X4' RECESSED FIXTURE.
- 2'X2' RECESSED EMERGENCY FIXTURE.
- 2'X4' RECESSED EMERGENCY FIXTURE.
- 1'X4' RECESSED EMERGENCY FIXTURE.
- LINEAR RECESSED FIXTURE.
- LINEAR RECESSED EMERGENCY FIXTURE.
- SURFACE MOUNTED OR SUSPENDED FIXTURE.
- SURFACE MOUNTED OR SUSPENDED EMERGENCY FIXTURE.
- RECESSED CEILING FIXTURE.
- RECESSED EMERGENCY CEILING FIXTURE.
- PENDANT MOUNT FIXTURE.
- CEILING MOUNTED EXIT SIGN. PROVIDE CHEVRONS AS INDICATED BY ARROWS.
- EXIT SIGN WITH EMERGENCY LIGHTING.
- WALL MOUNTED EXIT SIGN. PROVIDE CHEVRONS AS INDICATED BY ARROWS.
- WALL MOUNTED FIXTURE.
- WALL MOUNTED LINEAR FIXTURE.
- WALL MOUNTED EMERGENCY LINEAR FIXTURE.
- SITE ARM MOUNT POLE LIGHT FIXTURE.
- SITE POLE TOP LIGHT FIXTURE.
- SURFACE MOUNTED TRACK AND TRACK LIGHTING FIXTURE.
- WALLWASH OR SPOT LIGHT FIXTURE.
- IN-GRADE MOUNTED FIXTURE.

MISCELLANEOUS

- C — CONTACTOR.
- PE — PHOTOCELL.
- CEILING MOUNTED JUNCTION BOX.
- WALL MOUNTED JUNCTION BOX.
- FLEXIBLE CONNECTION TO EQUIPMENT.
- PROVISIONS FOR CABLE TELEVISION OUTLET. MOUNT ABOVE CEILING UNLESS NOTED OTHERWISE. PROVIDE AN OUTLET BOX AND A 3/4" CONDUIT TO ACCESSIBLE LOCATION (IF REQUIRED.)

GEAR

- ???/F-? — FUSED DISCONNECT SWITCH. TEXT INDICATES AMPACITY/NUMBER OF POLES/ENCLOSURE TYPE; F=(RATING OF FUSES).
- ???/? — NON-FUSED DISCONNECT SWITCH. TEXT INDICATES AMPACITY/NUMBER OF POLES/ENCLOSURE TYPE.
- MAGNETIC MOTOR STARTER.
- ???/F-?/NEMA SIZE ? — COMBINATION FUSED DISCONNECT AND MAGNETIC MOTOR STARTER.
- COMBINATION CIRCUIT BREAKER AND MAGNETIC MOTOR STARTER.
- PANELBOARD.
- COMBINATION CIRCUIT BREAKER AND MAGNETIC MOTOR STARTER.
- FLUSH MOUNTED CIRCUIT BREAKER STYLE SWITCH IN A NEMA 3R ENCLOSURE. SWITCH SHALL BE RATED 60A, 2-POLE MINIMUM.

SWITCHES

- $ — SINGLE-POLE, SINGLE-THROW SWITCH. MOUNT CENTERLINE OF BOX AT 45"A.F.F. UNLESS NOTED OTHERWISE.
- 2P $ — DOUBLE-POLE, SINGLE-THROW, 30 AMP SWITCH. MOUNT CENTERLINE OF BOX AT 45"A.F.F. UNLESS NOTED OTHERWISE.
- 3 $ — THREE-WAY SWITCH. MOUNT CENTERLINE OF BOX AT 45"A.F.F. UNLESS NOTED OTHERWISE.
- 4 $ — FOUR-WAY SWITCH. MOUNT CENTERLINE OF BOX AT 45"A.F.F. UNLESS NOTED OTHERWISE.
- LV — LOW VOLTAGE DIMMER. MOUNT CENTERLINE OF BOX AT 45"A.F.F. UNLESS NOTED OTHERWISE. SELECT PROPER DIMMER FOR TRANSFORMER TYPE.
- LED DIMMER SWITCH. MOUNT CENTERLINE OF BOX AT 45"A.F.F. UNLESS NOTED OTHERWISE.
- C — LINE VOLTAGE COMPANION DIMMER SWITCH. LUTORN #MSC-AD-277-WH OR APPROVED EQUAL. MOUNT CENTERLINE OF BOX AT 45"A.F.F. UNLESS NOTED OTHERWISE.
- M $ — AUTOMATIC WALL SWITCH. LUTRON #MS-A102-WH OR APPROVED EQUAL. MOUNT CENTERLINE OF BOX AT 45" A.F.F. UNLESS NOTED OTHERWISE.
- MS $ — MANUAL MOMENTARY WALL SWITCH. LUTRON #MS-A102-WH OR APPROVED EQUAL. MOUNT CENTERLINE OF BOX AT 45" A.F.F. UNLESS NOTED OTHERWISE.
- M2 $ — DUAL TECHNOLOGY, DUAL RELAY WALL SWITCH. SENSORSWITCH #WSD-PDT-2P OR APPROVED EQUAL. MOUNT CENTERLINE OF BOX AT 45" A.F.F. UNLESS NOTED OTHERWISE.
- M — AUTOMATIC WALL SWITCH WITH INTEGRAL 0-10V DIMMER. LUTRON #MS-Z101 OR APPROVED EQUAL. MOUNT CENTERLINE OF BOX AT 45"A.F.F. UNLESS NOTED OTHERWISE.
- TS $ — DIGITAL TIME SWITCH WITH ADJUSTABLE RANGE FROM 5 MINUTES TO 12 HOURS. FURNISH WITH AUDIBLE WARNING. SENSORSWITCH #PTS-60 OR APPROVED EQUAL. MOUNT CENTERLINE OF BOX AT 45" A.F.F. UNLESS NOTED OTHERWISE.
- T $ — HORSEPOWER RATED SWITCH WITH THERMAL OVERLOADS (MANUAL MOTOR STARTER).
- 3RL $ — WIRELESS THREE BUTTON WITH DIMMING WALL SWITCH. LUTRON #PJ2-3BRL-GWH-L01
- MD1 — PASSIVE INFRARED AND ULTRASONIC DUAL TECHNOLOGY OCCUPANCY SENSOR WITH A 12' RADIAL COVERAGE. CEILING MOUNTED. SENSORSWITCH #CM-PDT-9 OR APPROVED EQUAL.
- MD2 — PASSIVE INFRARED AND ULTRASONIC DUAL TECHNOLOGY OCCUPANCY SENSOR WITH 2000 SQFT COVERAGE. CEILING MOUNTED. LUTRON #LOS-CDT-2000-WH OR APPROVED EQUAL.
- MDW — WIRELESS PASSIVE INFRARED OCCUPANCY SENSOR. CEILING MOUNTED. LUTRON #LRF2-OCR2B-P-WH OR APPROVED EQUAL.
- MDH — PASSIVE INFRARED OCCUPANCY SENSOR WITH A 130 LINEAR FT. COVERAGE. WALL MOUNTED AT 7' ABOVE FINISH FLOOR. SENSORSWITCH #HW13 OR APPROVED EQUAL.
- HMD — PASSIVE INFRARED OCCUPANCY SENSOR. HIGH CEILING MOUNT. SENSORSWITCH #CMR-6 OR APPROVED EQUAL.
- MDC — PASSIVE INFRARED AND ULTRASONIC DUAL TECHNOLOGY OCCUPANCY SENSOR WITH A 2000 SQ. FT. COVERAGE. MOUNT IMMEDIATELY BELOW CEILING. SENSORSWITCH #WV-PDT-16 OR APPROVED EQUAL.
- PP — POWER PACK MOUNTED ABOVE CEILING. LUTRON #PP-DV OR APPROVED EQUAL.
- PP — POWER PACK WITH WIRELESS AND DIMMING MODULE WITH 0-10V CONTROL MOUNTED ABOVE CEILING. LUTRON #RMJ-5T-DV-B OR APPROVED EQUAL.
- PW — POWER PACK WITH WIRELESS MOUNTED ABOVE CEILING. LUTRON #RMJ-16R-DV-B OR APPROVED EQUAL.
- PP2 — DUAL RELAY PACK MOUNTED ABOVE CEILING. SENSORSWITCH #PP20-2P OR APPROVED EQUAL.
- ELCU — EMERGENCY LIGHTING CONTROL UNIT. EQUAL TO WATTSTOPPER #ELCU-100 OR APPROVED EQUAL.
- EPD — EMERGENCY LIGHTING CONTROL UNIT WITH DIMMING BYPASS. EQUAL TO LVS CONTROLS #EPC-1-D OR APPROVED EQUAL.
- EPR — EMERGENCY LIGHTING BYPASS SHUNT RELAY. SENSORSWITCH #PP16-SHUNT OR APPROVED EQUAL.
- DS — WIRELESS DAYLIGHT SENSOR.
- MDO — PASSIVE INFRARED AND DUEL TECHNOLOGY LOW TEMPERATURE / HIGH HUMIDITY OCCUPANCY SENSOR.

ACCESS CONTROL

- CR — CARD READER.
- PB — PUSH TO EXIT BUTTON.
- BR — BIOMETRIC READER.
- MD — MOTION DETECTOR TO RELEASE MAGNETIC LOCK.
- ML — MAGNETIC LOCK.
- EL — ELECTRIC LATCH.
- ES — ELECTRIC DOOR STRIKE.
- D — DURESS BUTTON CONNECTED TO IDS.
- ACP — ACCESS CONTROL PANEL.
- CONNECTION TO MAGNETIC LOCK RELEASE SWITCH IN PANIC HARDWARE.
- HC — HANDICAP PUSHPAD FURNISHED WITH AUTOMATIC DOOR OPERATOR, INSTALLED BY ELECTRICAL CONTRACTOR.
- DHO — DOOR HOLD OPEN.
- CR — VEHICLE PEDESTAL CONTAINING CARD READER FOR ENTRANCE GATE TO PARKING LOT.
- BCR — VEHICLE BARCODE READER.

CONDUIT AND WIRING

- CONDUCTORS IN CONDUIT CONCEALED WITHIN WALL OR CEILING. TIC MARKS INDICATE NUMBER OF CONDUCTORS. THE EQUIPMENT GROUNDING CONDUCTOR IS NOT SHOWN, BUT SHALL BE PROVIDED. SIZE THE EQUIPMENT GROUNDING CONDUCTOR AND THE CONDUIT PER THE NEC. THE ABSENCE OF TIC MARKS SIGNIFIES THAT TWO CONDUCTORS PLUS AN EQUIPMENT GROUNDING CONDUCTOR SHOULD BE PROVIDED. FOR EXAMPLE, THE MARKINGS TO THE LEFT SIGNIFY THAT THREE CONDUCTORS PLUS AN EQUIPMENT GROUNDING CONDUCTOR SHOULD BE PROVIDED.
- 10 — THE TEXT INSIDE THE ARC INDICATES THE AWG SIZE OF THE CONDUCTORS THAT SHALL BE RUN IN THE CONDUIT. THE ABSENCE OF TEXT SIGNIFIES THAT THE CONDUCTORS SHOULD BE #12 AWG.
- CIRCUITRY RUN IN STRAIGHT LINE SEGMENTS SIGNIFIES EXPOSED SURFACE-MOUNTED RACEWAY (SEE SPECIFICATIONS).
- CONDUCTORS IN CONDUIT CONCEALED BELOW GRADE OR FLOOR. TIC MARKS INDICATE NUMBER OF CONDUCTORS. THE EQUIPMENT GROUNDING CONDUCTOR IS NOT SHOWN, BUT SHALL BE PROVIDED. SIZE THE EQUIPMENT GROUNDING CONDUCTOR AND THE CONDUIT PER THE NEC. THE ABSENCE OF TIC MARKS SIGNIFIES THAT TWO CONDUCTORS PLUS AN EQUIPMENT GROUNDING CONDUCTOR SHOULD BE PROVIDED. THE MARKINGS TO THE LEFT SIGNIFY THAT THREE CONDUCTORS PLUS AN EQUIPMENT GROUNDING CONDUCTOR SHOULD BE PROVIDED.
- LA-1 — HOMERUN TO PANELBOARD. ARC DENOTES CONCEALED CIRCUITRY. TEXT DENOTES PANELBOARD NAME WITH CIRCUIT NUMBER. DEVICES HAVING CIRCUIT NUMBERS LOCATED BESIDE THEM MAY NOT SHOW THE CIRCUIT NUMBERS AT THE HOMERUN ARROWS.
- LA-1 — PARTIAL HOMERUN TO PANELBOARD. COMBINE ALL PARTIAL HOMERUNS THAT ARE ON THE SAME CIRCUIT IN A JUNCTION BOX PRIOR TO ENTERING THE PANELBOARD.
- LOW VOLTAGE CONDUCTORS USED FOR MOTION DETECTOR CIRCUITRY. SEE MANUFACTURER'S RECOMMENDATIONS FOR CONDUCTOR REQUIREMENTS.
- CABLE TRAY. SEE A/V DRAWINGS FOR CABLE TRAY SPECIFICATIONS.
- LIFE SAFETY CONDUCTORS IN CONDUIT CONCEALED WITHIN WALL OR CEILING. TIC MARKS INDICATE NUMBER OF CONDUCTORS. THE EQUIPMENT GROUNDING CONDUCTOR IS NOT SHOWN, BUT SHALL BE PROVIDED. SIZE THE EQUIPMENT GROUNDING CONDUCTOR AND THE CONDUIT PER THE NEC. THE ABSENCE OF TIC MARKS SIGNIFIES THAT TWO CONDUCTORS PLUS AN EQUIPMENT GROUNDING CONDUCTOR SHOULD BE PROVIDED. FOR EXAMPLE, THE MARKINGS TO THE LEFT SIGNIFY THAT TWO #12 AWG CONDUCTORS PLUS AN EQUIPMENT GROUNDING CONDUCTOR SHOULD BE PROVIDED.

VOLTAGE DROP CHART FOR 20A, 1Ø CIRCUITS

Voltage	Circuit Length	Conductor Size (AWG)
120	< 90'	#12
120	> 90'	#10
120	> 145'	#8
120	> 230'	#6
277	< 200'	#12
277	> 200'	#10
277	> 325'	#8
277	> 525'	#6

VOLTAGE DROP CHART NOTES:
1) CIRCUIT SIZES INDICATED ON THE DRAWINGS ARE MINIMUM REQUIREMENTS. REFER TO THIS CHART FOR UPSIZING CONDUCTORS AS NEEDED.

2) DO NOT CONNECT CONDUCTORS LARGER THAN #10 DIRECTLY TO A RECEPTACLE OR A SWITCH. PROVIDE A JUNCTION BOX TO DOWNSIZE THE CONDUCTOR TO #12 AT THE DEVICE.

3) FOR CIRCUITS LONGER THAN THOSE LISTED ABOVE, CONSULT WITH THE ENGINEER FOR CONDUCTOR SIZES.

INTERCOM SYSTEM

- CEILING SPEAKER.
- CS — CALL-IN SWITCH.
- MS — INTERCOM MASTER STATION WITH DOOR RELEASE. DESKTOP MOUNT.
- VANDAL & WEATHER RESISTANT INTERCOM SUB STATION.
- CALL BUTTON.

CCTV SYSTEM

NOTE: SEE SPECIFICATION 28-23-23 FOR CAMERA TYPES

- CEILING MOUNTED CAMERA.
- WALL MOUNTED CAMERA.
- INSIDE CORNER MOUNTED CAMERA.
- OUTSIDE CORNER MOUNTED CAMERA.
- WM — WALL MOUNTED MONITOR.
- DM — DESK MOUNTED MONITOR.

RECEPTACLES

- ? — DUPLEX RECEPTACLE, NEMA 5-20R, MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE.
- ? — SWITCHED DUPLEX RECEPTACLE, NEMA 5-20R, MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE. CONTROLLED RECEPTACLES SHALL BE MARKED IN ACCORDANCE WITH NEC 406.3 (E).
- ? — DOUBLE DUPLEX RECEPTACLE, NEMA 5-20R, ONE COVER PLATE, MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE.
- ? — DOUBLE DUPLEX RECEPTACLE, NEMA 5-20R, ONE COVER PLATE, MOUNTED WITH BOTTOM OF BOX 2" ABOVE COUNTER WITH BACKSPLASH, AND 6" ABOVE COUNTER WITHOUT BACKSPLASH. WHERE RECEPTACLE IS SHOWN IN AN AREA WITH NO COUNTER, MOUNT 45"A.F.F. TO CENTERLINE OF BOX.
- ? — DOUBLE DUPLEX RECEPTACLE, NEMA 5-20R, ONE COVER PLATE, MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE. ONE DUPLEX RECEPTACLE WILL BE SWITCH AND ONE DUPLEX RECEPTACLE WILL BE UNSWITCHED. CONTROLLED RECEPTACLES SHALL BE MARKED IN ACCORDANCE WITH NEC 406.3 (E).
- ? — DUPLEX RECEPTACLE, NEMA 5-20R, MOUNTED WITH BOTTOM OF BOX 2" ABOVE COUNTER WITH BACKSPLASH AND 6" ABOVE COUNTER WITHOUT BACKSPLASH. WHERE RECEPTACLE IS SHOWN IN AN AREA WITH NO COUNTER, MOUNT 45"A.F.F. TO CENTERLINE OF BOX.
- ? — DUPLEX RECEPTACLE, NEMA CONFIGURATION AS NOTED ON FLOORPLANS. PROVIDE 6' CORD AND MATCHING PLUG WHERE REQUIRED. MOUNTING DETERMINED BY NEC FOR TYPE OF EQUIPMENT BEING CONNECTED.
- ?/DF — DUPLEX RECEPTACLE, NEMA 5-20R, FOR DRINKING FOUNTAIN FED FROM GFCI BREAKER. MOUNTED IN ACCORDANCE WITH MANUFACTURER'S ROUGH-IN REQUIREMENTS. VERIFY CONNECTION TYPE PRIOR TO BID. PROVIDE PROPER EQUIPMENT FOR CONNECTION TYPE REQUIRED.
- ? — DUPLEX RECEPTACLE, NEMA 5-20R, MOUNTED IN A FLOOR BOX.
- ? — DOUBLE DUPLEX RECEPTACLE, NEMA 5-20R, MOUNTED IN A FLOOR BOX.
- ? — SINGLE RECEPTACLE, NEMA 14-50R. PROVIDE 6' CORD AND MATCHING PLUG WHERE REQUIRED. MOUNTING DETERMINED BY NEC FOR TYPE OF EQUIPMENT BEING CONNECTED.
- ? — SINGLE RECEPTACLE, NEMA 5-10R, MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE.
- ? — SINGLE RECEPTACLE, NEMA 6-30R, MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE.
- ? — SINGLE RECEPTACLE, NEMA 14-30R, MOUNTED 36" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE. PROVIDE 6' CORD AND MATCHING PLUG WHERE REQUIRED.
- ? — DUPLEX RECEPTACLE, NEMA 5-20R, MOUNTED ABOVE THE CEILING UNLESS NOTED OTHERWISE.
- 20A RELAY MOUNTED ABOVE CEILING. SEE DETAIL 3/E0.6 FOR BASIC WIRING DETAIL.

FIRE ALARM SYSTEM

- F — MANUAL PULL STATION. MOUNT 48"A.F.F. TO CENTERLINE OF BOX.
- STROBE. MOUNT 80"A.F.F. TO BOTTOM OF BOX.
- F — COMBINATION HORN AND STROBE. MOUNT 80"A.F.F. TO BOTTOM OF BOX.
- SMOKE DETECTOR.
- T — THERMAL DETECTOR.
- DR — DUCT SMOKE DETECTOR IN RETURN DUCT.
- DS — DUCT SMOKE DETECTOR IN SUPPLY DUCT.
- E — ELEVATOR RECALL SMOKE DETECTOR.
- SES — SMOKE DETECTOR CONNECTED TO THE SMOKE EVACUATION SYSTEM.
- FACP — FIRE ALARM CONTROL PANEL.
- FAAN — FIRE ALARM ANNUNCIATOR PANEL.
- FATC — FIRE ALARM TERMINAL CABINET/BOOSTER PANEL.
- FASD — FIRE ALARM CONNECTION TO SHUTTER DOOR. DOOR SHALL ROLL DOWN UPON AN ALARM CONDITION.
- SEP — SMOKE EVACUATION ACTIVATION PANEL.
- FS — FLOW SWITCH.
- TS — TAMPER SWITCH.
- DHO — DOOR HOLD OPEN MAGNET TO RELEASE UPON ALARM CONDITION OF THE FIRE ALARM CONTROL PANEL.
- FAHS — FIRE ALARM HORN AND STROBE MOUNTED ON THE CEILING TO A FLUSH MOUNTED BOX.
- FIRE ALARM STROBE MOUNTED ON THE CEILING TO A FLUSH MOUNTED BOX.
- S — SMOKE DAMPER.

INTRUSION DETECTION SYSTEM

- KP — KEYPAD.
- MD — MOTION DETECTOR.
- GB — GLASS BREAK DETECTOR.
- DC — DOOR CONTACT.
- HORN.
- IDCP — INTRUSION DETECTION CONTROL PANEL.
- D — DURESS PUSH BUTTON.

COMMUNICATIONS

- E — TELEPHONE CONNECTION FOR ELEVATOR CONTROLLER. INCLUDE ALL CABLING AND ACTIVATION OF TELEPHONE SERVICE. ROUTE CABLE INTO THE ELEVATOR CONTROLLER.
- COMBINATION TELEPHONE/DATA OUTLET MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE.
- COMBINATION TELEPHONE/DATA OUTLET MOUNTED WITH BOTTOM OF BOX 2" ABOVE COUNTER WITH BACKSPLASH, AND 6" ABOVE COUNTER WITHOUT BACKSPLASH.
- TELEPHONE OUTLET MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE.
- TELEPHONE OUTLET MOUNTED WITH BOTTOM OF BOX 2" ABOVE COUNTER WITH BACKSPLASH, AND 6" ABOVE COUNTER WITHOUT BACKSPLASH.
- DATA OUTLET MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE.
- DATA OUTLET MOUNTED WITH BOTTOM OF BOX 2" ABOVE COUNTER WITH BACKSPLASH, AND 6" ABOVE COUNTER WITHOUT BACKSPLASH.
- COMBINATION TELEPHONE/DATA OUTLET MOUNTED IN A FLOOR BOX.
- 2 MVE F2 ? — DUPLEX RECEPTACLE, NEMA 5-20R, DATA OUTLETS, AND A/V OUTLETS MOUNTED IN A FLOOR BOX. DATA OUTLET SHALL HAVE TWO JACKS UNLESS NOTED OTHERWISE WITH NUMBER BESIDE SYMBOL. COORDINATE ALL FLOOR BOX DETAILS WITH EAV DRAWINGS.
- 2 MVE — DOUBLE DUPLEX RECEPTACLE, NEMA 5-20R, DATA OUTLETS, AND A/V OUTLETS MOUNTED IN A FLOOR BOX. DATA OUTLET SHALL HAVE TWO JACKS UNLESS NOTED OTHERWISE WITH NUMBER BESIDE SYMBOL. COORDINATE ALL FLOOR BOX DETAILS WITH EAV DRAWINGS.
- 4 MVE FBT ? — DOUBLE DUPLEX RECEPTACLE, NEMA 5-20R, DATA OUTLETS, AND A/V OUTLETS MOUNTED IN A FLOOR BOX. DATA OUTLET SHALL HAVE FOUR JACKS UNLESS NOTED OTHERWISE WITH NUMBER BESIDE SYMBOL. COORDINATE ALL FLOOR BOX DETAILS WITH EAV DRAWINGS.
- MVE — DOUBLE DUPLEX RECEPTACLE, NEMA 5-20R AND A COMBINATION TELEPHONE/DATA OUTLET MOUNTED IN A FLOOR BOX.
- TELEVISION CABLE OUTLET MOUNTED 18" A.F.F. TO CENTERLINE OF BOX UNLESS NOTED OTHERWISE.

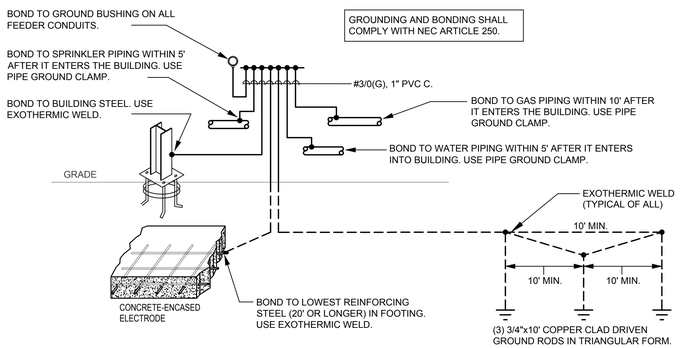
PROVIDE WARNING SIGNS AS SHOWN ON ALL SWITCHBOARDS, PANELBOARDS, MOTOR CONTROL CENTERS, DISCONNECTS, LOADCENTERS, ENCLOSED CIRCUIT BREAKERS, MOTOR STARTERS, & CONTACTORS. THIS REQUIREMENT REQUIRES THAT THE CALCULATIONS BE PERFORMED ON EQUIPMENT THAT IS SPECIFICALLY EXCLUDED FROM NFPA 70E.



THE GEAR MANUFACTURER SHALL PERFORM ALL CALCULATIONS NECESSARY TO COMPLETE WARNING SIGNS ACCURATELY.

SEE DRAWING E0.1 AND SPECIFICATION 26-26-00 FOR MORE INFORMATION.

1 / E0.4 WARNING LABEL DETAIL
Scale: NONE

NOTES:

1. HOMERUN CONDUITS SHALL BE SIZE 3/4" OR LARGER.
2. CONDUITS SHALL BE LIMITED TO THREE CURRENT CARRYING CONDUCTORS.
3. PROVIDE TYPEWRITTEN CIRCUIT DIRECTORIES INSIDE DOOR OF EACH PANELBOARD. EACH CIRCUIT SHALL BE DISTINGUISHED FROM ALL OTHERS.
4. PROVIDE A LABEL FOR ALL SWITCHGEAR, SWITCHBOARDS, MOTOR CONTROL CENTERS, PANELBOARDS, AND OTHER SERVICE EQUIPMENT THAT LEGIBLY DISPLAYS THE MAXIMUM AVAILABLE FAULT CURRENT. THE MAXIMUM FAULT CURRENT INFORMATION SHALL BE TAKEN FROM THE ARC FLASH/PROTECTIVE DEVICE COORDINATION STUDY PERFORMED BY THE GEAR MANUFACTURER. THE LABEL SHALL INCLUDE THE DATE THAT THE FAULT CURRENT CALCULATION WAS PERFORMED AND BE OF SUFFICIENT DURABILITY TO WITHSTAND THE ENVIRONMENT OF THE EQUIPMENT.

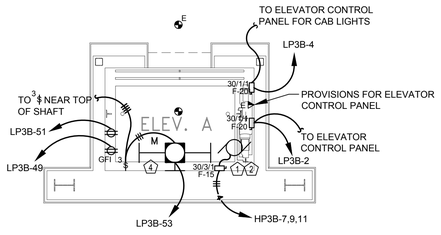
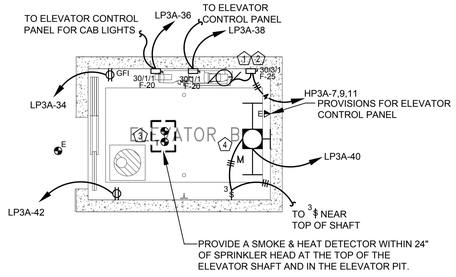
E0.6



DETAIL NOTES:

A. R1 IS A FIRE ALARM SYSTEM RELAY. THE COIL VOLTAGE IS BASED ON THE OUTPUT OF THE FIRE ALARM CONTROL PANEL. IT SHALL HAVE NORMALLY OPEN CONTACTS THAT ARE CLOSED BY THE FACP AFTER AN ALARM SIGNAL FROM ONE OF THE THERMAL DETECTORS HAS BEEN RECIEVED AND THE TIME DELAY REQUIRED BY NFPA 72, PARAGRAPH 21.4.3 HAS EXPIRED.

B. R2 SHALL HAVE A 120V COIL. IT SHALL HAVE NORMALLY-CLOSED CONTACTS. THE CONTACTS ARE SHOWN IN THE SCHEMATIC IN THEIR NORMAL OPERATING STATE OF HELD-OPEN WHEN CONTROL VOLTAGE IS PRESENT.



1 / E0.7 ELEVATOR/FIRE ALARM DETAIL TYPICAL (ELEVATOR B)

Scale: NONE

2 / E0.7 ELEVATOR A DETAIL

Scale: NONE

3 / E0.7 ELEVATOR B DETAIL

Scale: NONE

ELEVATOR "A" NOTES:

A. ELEVATOR "A" IS AN OCCUPANT ELEVATOR AND SHALL COMPLY WITH REQUIREMENTS OF IBC 2012 SECTION 3008/

B. ALL ELECTRICAL RELATED POWER, CONTROL SIGNAL, COMMUNICATION, LIGHTING, HEATING, AIR CONDITIONING, VENTILATION, AND AUXILIARY SYSTEM WIRES AND CABLES THAT ARE LOCATED OUTSIDE OF THE ELEVATOR HOISTWAY SHALL HAVE A UL LISTED FIRE-RESISTANCE RATING OF NOT LESS THAN TWO HOURS AND TO BE INSTALLED IN ACCORDANCE WITH ITS UL LISTING.

C. ELEVATOR "A" SHALL NOT HAVE SMOKE/THERMAL DETECTORS INSTALLED IN THE HOISTWAY AND SHALL NOT BE SHUNT TRIPPED.

GENERAL ELEVATOR DETAIL NOTES:

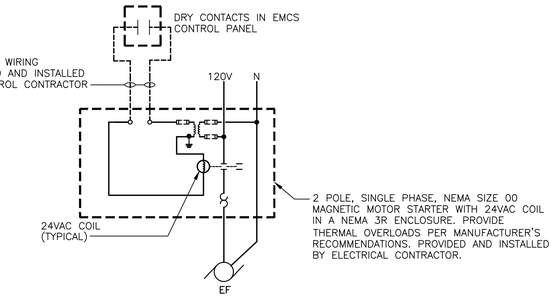
A. THE MAINTENANCE RECEPTACLE SHALL BE ON A DEDICATED CIRCUIT.

B. THE LIGHTS LOCATED IN THE ELEVATOR SHAFT MUST BE ON A DEDICATED CIRCUIT.

C. MOUNT LIGHT SWITCHES IN ELEVATOR SHAFT NEAR LADDER.

D. ALL EQUIPMENT, RECEPTACLES, LIGHTING, ETC. SHALL BE INSTALLED IN ACCORDANCE WITH THE ELEVATOR MANUFACTURER'S INSTALLATION REQUIREMENTS.

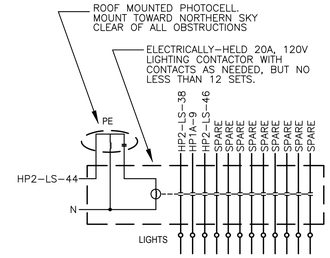
E. PROVIDE A NORMALLY OPEN, DRY CONTACT SIGNAL FROM EACH EQUIPMENT AUTOMATIC TRANSFER SWITCH TO EACH ELEVATOR CONTROL PANEL TO SIGNAL WHEN ON EMERGENCY POWER AND TO PROVIDE A 30 SECOND PRE-SIGNAL TO TRANSFER SWITCH CHANGE.



KEYED ELEVATOR DETAIL NOTES:

1. PROVIDE DISCONNECT SWITCH FOR ELEVATOR WITH A SET OF AUXILIARY CONTACTS FOR THE ELEVATOR VENDOR'S USE. CONSULT ELEVATOR VENDOR FOR EXACT FUSE SIZE AND ALL ELEVATOR ELECTRICAL REQUIREMENTS.

2. ELEVATOR FEEDER AND EQUIPMENT SIZES ARE BASED ON BEST INFORMATION AVAILABLE AT THE TIME OF DESIGN. VERIFY ALL ELECTRICAL REQUIREMENTS WITH ELEVATOR VENDOR PRIOR TO SUBMITTING BROCHURES AND/OR INSTALLING ELECTRICAL GEAR.



3. SEE DETAIL 1/E0.7 FOR FIRE ALARM AND SHUNT TRIP OPERATION.

4. PROVIDE AND INSTALL A FIXTURE AND THREE-WAY SWITCH NEAR THE TOP AND BOTTOM OF THE ELEVATOR SHAFT.

GENERAL NOTES

GENERAL DEMOLITION NOTES

DO NOT SCALE DRAWINGS.

REFER TO ENTIRE CONSTRUCTION DOCUMENTS FOR ANY ADDITIONAL DEMOLITION NOTES.

THE GC SHALL BE RESPONSIBLE FOR ALL DEMOLITION DESCRIBED IN CONSTRUCTION DOCUMENTS.

THE GC SHALL FURNISH ALL LABOR, MATERIALS, EQUIPMENT, AND SERVICES REQUIRED FOR COMPLETE DEMOLITION, REMOVAL, AND RELATED WORK AS INDICATED.

THE GC SHALL REMOVE, REPAIR, CLEAN, AND STORE ANY REMOVED ITEMS SPECIFIED TO BE RE-USED.

GC SHALL VISIT SITE PRIOR TO START OF WORK TO DETERMINE EXTENT OF DEMOLITION. IF ANY DISCREPANCIES OR CONFLICTS, CONTACT ARCHITECT.

THE GC SHALL COORDINATE THE MOVEMENT OF CONSTRUCTION MATERIALS AND EQUIPMENT, TRASH REMOVAL, TEMPORARY ELECTRIC, AND REMOVAL OF BARRICADE WITH THE OWNER.

ALL MATERIALS AND EQUIPMENT SHALL BE REMOVED IN STRICT ACCORDANCE WITH MANUFACTURERS RECOMMENDATIONS.

GC SHALL SECURE, SUSPEND, AND/OR ANCHOR ANY EXISTING CONSTRUCTION AS REQUIRED TO OBTAIN A PROPER AND SAFE DEMOLITION WORK.

GC SHALL PROVIDE ALL NECESSARY TEMPORARY BARRICADES AND OTHER FORMS OF PROTECTION AS REQUIRED BY OWNER AND LOCAL GOVERNING AGENCIES TO PROTECT OWNER'S PERSONNEL FROM INJURY DUE TO CONSTRUCTION.

GENERAL SITE NOTES

GS01. ALL BIDDERS SHALL VISIT SITE TO EVALUATE ALL EXISTING CONDITIONS AFFECTING WORK PRIOR TO SUBMITTING BIDS. CONTRACTOR(S) SHALL NOTIFY ARCHITECT OF ANY CONDITIONS AND /OR DISCREPANCIES NOT ADDRESSED IN CONTRACT DOCUMENTS.

GS02. THE GENERAL CONTRACTOR SHALL PROTECT EXISTING PAVING, BUILDING, PROPERTY, & ADJACENT PROPERTIES. ANY & ALL DAMAGES BY CONSTRUCTION OPERATIONS, EMPLOYEES OF THE CONTRACTOR & ANY SUB CONTRACTORS SHALL BE CORRECTED AT THE EXPENSE OF GENERAL CONTRACTOR TO THE SATISFACTION OF THE OWNER.

GS03. THE OWNER RETAINS THE RIGHT TO SELECT AND RETAIN ANY ITEMS REMOVED FROM EXISTING SITE AND/OR BUILDING. THE GENERAL CONTRACTOR SHALL DISPOSE OF OTHER ITEMS REMOVED.

GS04. ANY QUANTITY ESTIMATES THAT MAY BE INCLUDED ON THE DOCUMENTS ARE ARE FOR DESIGN AND CLIENT REFERENCE ONLY. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO CALCULATE AND REALIZE THEIR OWN ESTIMATES AND QUANTITIES. THE ARCHITECT ASSUMES NO LIABILITY FOR OMISSIONS OR ERRORS FOR THESE ESTIMATES; AND NO COMPENSATION SHALL BE ALLOWED FOR CONTRACTOR MISINTERPRETATIONS.

GS05. QUANTITY ESTIMATES ON DRAWINGS ARE ONLY AN AID TO CLARIFICATION OF UNITS AND A CHECK FOR THE CONTRACTOR TO COMPARE WITH HIS OWN ESTIMATES. QUANTITY ESTIMATES HAVE BEEN MADE CAREFULLY; BUT THE ARCHITECT ASSUMES NO LIABILITY FOR OMISSIONS OR ERRORS. DIFFERENCES SHALL BE BROUGHT TO THE ATTENTION OF THE ARCHITECT. NO EXTRA COMPENSATION SHALL BE ALLOWED FOR ADDITIONAL QUANTITIES NECESSARY TO COMPLETE THE WORK.

GS06. THE DESIGN, ADEQUACY, AND SAFETY OF ERECTION, BRACING, SHORING, TEMPORARY SUPPORTS, ETC. IS THE SOLE RESPONSIBILITY OF THE CONTRACTOR.

GS07. MATERIAL, WORKMANSHIP, AND DESIGN SHALL CONFORM TO THE INTERNATIONAL BUILDING CODE, CURRENT EDITION.

GS08. PROVIDE BRICK EXPANSION JOINTS BEHIND EA. DOWNSPOUT AND/OR DIRECTED BY ARCHITECT ON JOB-SITE. (APPROX. 40'-0" O.C.).

GS09. THE CONTRACTOR SHALL COORDINATE THE ARCHITECTURAL, STRUCTURAL, MECHANICAL, ELECTRICAL, PLUMBING AND CIVIL CONTRACT DOCUMENTS. THE ARCHITECT OF RECORD SHALL BE NOTIFIED OF ANY DISCREPANCIES OR OMISSIONS.

SITE NOTES - GRADING AND DRAINAGE:

SG00. ALL ROUGH GRADING, FINISH GRADING, EXCAVATION & FILL WORK INDICATED IN CONTRACT DOCUMENTS & AS REQUIRED FOR CONSTRUCTION SHALL BE BY GENERAL CONTRACTOR.

SG01. THE GENERAL CONTRACTOR SHALL PROVIDE DRAINAGE OF SURFACE WATER AWAY FROM BUILDING ON ALL SIDES. 2% SLOPE MINIMUM.

SG02. FINISH GRADE SHALL BE 6" MINIMUM BELOW FINISH FLOOR ELEVATION AND SLOPE AWAY FROM BUILDING.

SG03. THE GENERAL CONTRACTOR IS TO PROVIDE AND PLACE TOPSOIL AND GRASSING (SEED) WHERE EARTH IS EXPOSED BY CONSTRUCTION OPERATIONS THAT IS NOT SCHEDULED TO RECEIVE CONCRETE OR ASPHALT PAVING.

SG04. THE CONTRACTOR WILL BE RESPONSIBLE FOR THE INSTALLATION AND MAINTENANCE OF ALL EROSION CONTROL MEASURES.

SG05. PROVIDE STABLE BASE AND/OR SUB GRADE. ANY SOFT OR YIELDING AREAS IN THE SHALL BE REMOVED AND BACKFILLED WITH FILL COMPACTED TO 95% OF STANDARD PROCTOR OR APPROVED MATERIAL.

SG06. ALL ROUGH GRADING, FINISH GRADING, EXCAVATION & FILL WORK INDICATED ON CONSTRUCTION DOCUMENTS & AS REQUIRED FOR CONSTRUCTION IS TO BE BY THE GENERAL CONTRACTOR.

SG07. EROSION CONTROL MEASURES SHALL BE TAKEN AS REQUIRED OR AS INDICATED ON AN EROSION CONTROL PLAN. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO ASSESS SITE CONDITIONS AND POTENTIAL EROSION DISTURBANCES CAUSED BY CONSTRUCTION.

PARKING/PAVING NOTES

STRIPES FOR PARKING SHALL BE 4" WIDE (COLOR TO BE YELLOW TRAFFIC PAINT), STRIPES TO BE FAST DRYING TRAFFIC PAINT. MATERIALS USED AND APPLICATIONS ARE TO BE IN ACCORDANCE WITH M.S.H.D. STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION. ARROWS FOR DIRECTIONAL TRAFFIC AND HANDICAPPED SPACES SHALL ALSO BE PAINTED.

IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO PROVIDE A STABLE BASE AND/OR SUB GRADE FOR PAVING APPLICATION; UNSUITABLE MATERIAL ENCOUNTERED DURING PAVING PREPARATION SHALL BE REMOVED AND AREA BACK FILLED WITH ACCEPTABLE MATERIAL.

ALL ASPHALT AND CONCRETE PAVING AND RESURFACING SHALL BE IN ACCORDANCE WITH MS STATE HIGHWAY "STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION".

ACCESSIBLE (ADA) PARKING NOTES

HANDICAPPED PARKING AND ACCESS SHALL COMPLY WITH STATE LAW NUMBER 27-19-56 AND S.B.C. APPENDIX M; SIGN SHALL BE BLUE AND BEAR THE INTERNATIONAL ACCESSIBILITY IN WHITE. SIGN SHALL BE 12" X 18" AND MOUNTED ON PERMANENTLY ANCHORED POLES BETWEEN (54") AND (66") IN HEIGHT AND CENTERED AT EACH HANDICAPPED SPACE.

HANDICAP STALLS AND LOADING ZONES SHALL HAVE A MAXIMUM SLOPE OF 2%.

HANDICAP LOADING ZONES FOR CARS SHALL BE 5' WIDE MINIMUM.

HANDICAP LOADING ZONES FOR VANS SHALL BE 8' WIDE MINIMUM.

EACH HANDICAP STALL SHALL HAVE IDENTIFYING SIGN. SIGN SHALL BE 60 INCHES ABOVE GRADE TO BOTTOM OF SIGN.

EACH VAN HANDICAP STALL SHALL HAVE IDENTIFYING SIGN CONTAINING "VAN ACCESSIBLE". THE SIGN SHALL BE 60 INCHES ABOVE GRADE TO BOTTOM OF SIGN.

HANDICAP STALLS SHALL BE CLEARLY MARKED WITH PARKING EMBLEM (INTERNATIONAL SYMBOL OF ACCESSIBILITY)

HARDSCAPE NOTES

HS01. ALL HARDSCAPES INDICATED ARE BY GENERAL CONTRACTOR.

HS03. EXPANSION JOINTS ARE REQUIRED WHERE CONSTRUCTION ADJOINS NEW OR EXISTING SIDEWALKS, PAVEMENTS, BUILDINGS, AND / OR PARKING LOTS.

HS04. EXPANSION JOINTS SHALL BE FORMED OF PRE-FORMED JOINT FILLER CUT TO FULL CROSS-SECTION AND SHALL EXTEND THE WIDTH OF CONSTRUCTION

HS05. CONTROL JOINTS / SCORE PATTERNS SHALL BE PLACED AS INDICATED GRAPHICALLY. IF NO GRAPHIC IS INCLUDED, CONSULT ARCHITECT.

HS06. ALL CONCRETE SHALL BE 3000 PSI, UNLESS NOTED OTHERWISE.

HS11. SIDEWALK CROSS-SLOPES AND LANDINGS SHALL HAVE A MAXIMUM SLOPE OF 2%.

HS12. CONTINUOUS UNINTERRUPTED SIDEWALKS WITHOUT HANDRAILS SHALL NOT HAVE A SLOPE THAT EXCEEDS 5%.

HS13. SIDEWALKS SLEEVES SHALL BE PROVIDED AS INDICATED ON DRAWINGS AND/OR AT LONG SIDEWALK RUNS.

GENERAL NOTES

GN01. IT IS THE GENERAL CONTRACTOR'S RESPONSIBILITY TO DETERMINE THE FULL EXTENT OF THE RESPONSIBILITIES FOR EACH TRADE.

GN02. DRAWINGS INDICATE THE GENERAL SCOPE OF THE PROJECT IN TERMS OF ARCHITECTURAL DESIGN CONCEPT, I.E., THE DIMENSIONS OF THE BUILDING, THE MAJOR ARCHITECTURAL ELEMENTS, AND THE TYPE OF STRUCTURAL SYSTEM. THE DRAWINGS DO NOT NECESSARILY INDICATE OR DESCRIBE ALL WORK REQUIRED FOR FULL PERFORMANCE AND COMPLETION OF THE REQUIREMENTS OF THE CONTRACT. THE GENERAL CONTRACTOR / TRADE CONTRACTORS SHALL PERFORM SUCH SERVICES AND FURNISH ALL ITEMS REQUIRED FOR THE PROPER EXECUTION OF THE PROJECT.

GN03. THE CONTRACTOR SHALL VERIFY THE FLOOR AND ROOF MOUNTED MECHANICAL EQUIPMENT WEIGHTS, FLOOR AND/OR ROOF OPENING SIZES AND LOCATIONS WITH ARCHITECTURAL AND MECHANICAL DRAWINGS.

GN04. ALL MATERIALS STORED WITHIN THE BUILDING SHALL BE NEATLY STACKED AND SHALL NOT INTERFERE WITH OPERATION OF THE FACILITY OR NEARBY TENANTS. DO NOT STORE COMBUSTIBLE MATERIALS ON THE PREMISES FOR A PERIOD LONGER THAN NECESSARY FOR EXECUTION OF THE PROJECT.

GN05. THE CONTRACT DOCUMENTS SHALL NOT INCLUDE SHOP DRAWINGS, VENDOR DRAWINGS, OR ANY MATERIAL PREPARED AND SUBMITTED BY THE CONTRACTOR OR SUBCONTRACTOR.

GN06. NO PROVISION OF ANY REFERENCED STANDARD SPECIFICATION MANUAL OR CODE (WHETHER OR NOT SPECIFICALLY INCORPORATED BY REFERENCE IN THE CONTRACT DOCUMENTS) SHALL BE EFFECTIVE TO CHANGE THE DUTIES AND RESPONSIBILITIES OF OWNER, CONTRACTOR, ARCHITECT, OR SUPPLIER, OR ANY OF THEIR CONSULTANTS, AGENTS OR EMPLOYEES FROM THOSE SET FORTH IN THE CONTRACT DOCUMENTS, NOR SHALL IT BE EFFECTIVE TO ASSIGN TO THE ARCHITECT OF RECORD OR ANY OF THE ARCHITECT OF RECORD'S CONSULTANTS, AGENTS, OR EMPLOYEES ANY DUTY OR AUTHORITY TO SUPERVISE OR DIRECT THE FURNISHING OR PERFORMANCE OF THE WORK OR ANY DUTY OR AUTHORITY TO UNDERTAKE RESPONSIBILITIES CONTRARY TO THE PROVISIONS OF THE CONTRACT DOCUMENTS.

GN07. THE OWNER RETAINS THE RIGHT TO SELECT AND RETAIN ANY ITEMS REMOVED FROM EXISTING SITE AND/OR BUILDING. THE GENERAL CONTRACTOR SHALL DISPOSE OF OTHER ITEMS REMOVED.

GN08. THE GENERAL CONTRACTOR SHALL BE RESPONSIBLE FOR REMOVAL AND LEGALLY DISPOSAL OFF-SITE OF ALL DEBRIS RESULTING FROM THE DEMOLITION AND EXECUTION OF THE WORK.

GN09. THE CONTRACTOR SHALL, AT HIS OWN EXPENSE SHALL PERFORM ALL LAYOUT REQUIRED TO CONSTRUCT PROJECT, PROVIDE COMPETENT ENGINEERING SERVICES TO EXECUTE WORK IN ACCORDANCE WITH CONTRACT REQUIREMENTS, AND SHALL VERIFY FIGURES AS SHOWN ON SURVEY AND APPROACH DRAWINGS BEFORE UNDERTAKING ANY CONSTRUCTION WORK AND WILL BE RESPONSIBLE FOR FINISHED WORK.

T1.1

GENERAL NOTES Continued from Sheet T1.1

CONSTRUCTION DOCUMENT NOTES

THE GENERAL CONTRACTOR SHALL VERIFY DIMENSIONS AND SITE CONDITIONS BEFORE INITIATING WORK ON THE PROJECT. THE ARCHITECT SHALL BE NOTIFIED OF ANY DISCREPANCY.

THE CONTRACTOR SHALL NOT SCALE DRAWINGS. IF DIMENSIONS ARE IN QUESTION, THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING CLARIFICATION FROM THE ARCHITECT BEFORE PROCEEDING.

ALL DIMENSIONS ARE NOMINAL UNLESS OTHERWISE NOTED. DO NOT SCALE DRAWINGS, CONTACT ARCHITECT FOR DISPUTED DIMENSIONS.

GENERAL CONTRACTOR AND EACH SUBCONTRACTOR SHALL BECOME FAMILIAR WITH THE PROJECT AND BRING ANY DISCREPANCIES BETWEEN DRAWINGS AND FIELD CONDITION TO THE IMMEDIATE ATTENTION OF THE ARCHITECT.

INFORMATION IN THE CONTRACT DOCUMENTS, IN SOME INSTANCES, ARE TAKEN FROM EXISTING DOCUMENTS AND ON-SITE OBSERVATION. THE GENERAL CONTRACTOR SHALL VERIFY CONDITIONS BEFORE STARTING WORK ON THE PROJECT. THE ARCHITECT SHALL BE NOTIFIED OF ANY DISCREPANCY.

THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING CLARIFICATION FROM THE ARCHITECT BEFORE PROCEEDING.

THE ERROR AND OMISSIONS DESIGN LIABILITY IS LIMITED TO THE COST OF CORRECTING THE DEFICIENCY.

ALL OR PART OF THESE DOCUMENTS WERE GENERATED BY ELECTRONIC MEANS. THE ARCHITECT IS RELYING ON THE ACCURACY OF THE SOFTWARE EMPLOYED. THE ARCHITECT'S LIABILITY IS THEREFORE LIMITED TO THE EXTENT CUSTOMARY IN THE INDUSTRY.

THE CONTRACTOR SHALL NOTIFY IN WRITING THE ARCHITECT OF RECORD OF CONDITIONS ENCOUNTERED IN THE FIELD CONTRADICTORY TO THOSE SHOWN ON THE CONTRACT DOCUMENTS.

CODE NOTES

CN01. MATERIAL, WORKMANSHIP, AND DESIGN SHALL CONFORM TO THE INTERNATIONAL BUILDING CODE, LATEST EDITION.

CN02. REFERENCE TO STANDARD SPECIFICATIONS OF ANY TECHNICAL SOCIETY, ORGANIZATION OR ASSOCIATION OR TO CODES OF LOCAL OR STATE AUTHORITIES, SHALL MEAN THE LATEST STANDARD, CODE, SPECIFICATION OR TENATIVE SPECIFICATION ADOPTED AND PUBLISHED AT THE DATE OF TAKING BIDS, UNLESS SPECIFICALLY STATED OTHERWISE.

CN03. ALL WORK IS TO BE DONE IN ACCORDANCE WITH ALL GOVERNING CODES AND REGULATING AGENCIES. THIS PROJECT IS DESIGNED AND DOCUMENTED PER THE ARCHITECT'S INTERPRETATION OF THE CODE REQUIREMENTS. VARIOUS GOVERNING AGENCIES SOMETIMES INTERPRET THE CODES, LAWS AND ORDINANCES DIFFERENTLY. THESE AGENCIES HAVE JURISDICTION TO REQUIRE CHANGES IN DESIGN AND CONSTRUCTION INCLUDING THOSE AGENCIES INVOLVED WITH THE "AMERICANS WITH DISABILITIES ACT"(ADA)

CN04. ALL WORK UNDER THIS CONTRACT SHALL COMPLY WITH THE PROVISIONS OF THE SPECIFICATIONS AND DRAWINGS AND SHALL SATISFY ALL APPLICABLE CODES, ORDINANCES, A.D.A., AND REGULATIONS OF ALL GOVERNING BODIES INVOLVED. ANY MODIFICATIONS TO THE CONTRACT WORK REQUIRED BY SUCH AUTHORITIES SHALL BE AT THE EXPENSE OF THE OWNER, SUBJECT TO THE RECEIPT OF AN AFFIDAVIT OR LETTER FROM THE GOVERNING BODY AND OWNER'S PRIOR APPROVAL OF ANY ADDITIONAL COST TO BE INCURRED. ALL PERMITS AND LICENSES NECESSARY FOR THE PROPER EXECUTION OF THE WORK SHALL BE SECURED AND PAID FOR BY THE CONTRACTOR INVOLVED. APPLICABLE CODES INCLUDE, BUT ARE NOT LIMITED TO THE FOLLOWING:

FIRE CODE
BUILDING CODE
PLUMBING CODE
MECHANICAL CODE
ELECTRICAL CODE

COPYRIGHT NOTES

COPYRIGHT HOLDER: MCCLESKEY ASSOCIATES ... ARCHITECT, PLLC HATTIESBURG, MISSISSIPPI.
THIS DESIGN, INCLUDING A CONSTRUCTED BUILDING OR ARCHITECTURAL PLANS, MODELS, AND DRAWINGS, IS SUBJECT TO COPYRIGHT PROTECTION AS AN "ARCHITECTURAL WORK" UNDER SECTION 102 OF THE COPYRIGHT ACT (TITLE 17 OF THE UNITED STATES CODE). PROTECTION EXTENDS TO THE OVERALL FORM AS WELL AS THE ARRANGEMENT AND COMPOSITION OF SPACES AND ELEMENTS IN THE DESIGN. THE COPYRIGHT HOLDER RETAINS ALL RIGHTS OF THE DRAWINGS. REPRODUCTIONS, REPRESENTATIONS, OR DERIVATIVE WORKS OF THE DESIGN IN WHOLE OR IN PART ARE PROHIBITED WITHOUT THE COPYRIGHT HOLDER'S PERMISSION.

CONFIDENTIALITY NOTICE: THIS DOCUMENT(S) ARE FOR THE SOLE USE OF THE INTENDED RECIPIENT. ANY UNAUTHORIZED USE, REPRODUCTION, OR DISTRIBUTION IS PROHIBITED WITHOUT THE OWNER OR ARCHITECT'S CONSENT.

FLOOR PLAN NOTES

ALL PORCHES TO SLOPE AWAY FROM BUILDING

ALL EXTERIOR DOORS TO HAVE METAL THRESHOLDS

FLOOR DRAINS: TAPER FLOOR TO FLOOR DRAINS.

FIRE EXTINGUISHERS: PROVIDE AND INSTALL FIRE EXTINGUISHERS TO BE MOUNTED AS PER INSTRUCTIONS LOCAL FIRE OFFICIAL (SEE ALLOWANCE).

VERIFY RECESSED EQUIPMENT (FIRE EXTINGUISHER CABINETS, DRINK FOUNTAINS, REST ROOM ACCESSORIES, ETC.) TO ACCOMMODATE WALL CONSTRUCTION AND SPACE REQUIREMENTS.

FINISH NOTES

PAINTING: ALL SURFACES TO RECEIVE PAINT SHALL HAVE A PRIME SEALER COAT PLUS TWO (2) FINISH COATS. REPAIR/SEAL ALL SURFACES ON INTERIOR WHERE IMPERFECTIONS OCCUR BEFORE PAINTING. OWNER TO HAVE UNLIMITED CHOICE OF COLORS IN ALL AREAS REQUIRING PAINTING OR STAINING.

PAINT ALL EXPOSED STEEL, INCLUDING COLUMNS, RAILINGS, STRINGERS, AND RISER BACKS ON STAIRS.

ALL INTERIOR WALLS OF BUILDING TO RECEIVE PAINT EQUAL TO SHERWIN WILLIAMS "PRO-MAR 200", EGGSHELL FINISH, UNLESS NOTED DIFFERENTLY. APPLY PER MANUFACTURER'S RECOMMENDATIONS

FURRING: ALL FURRING NECESSARY TO COVER PIPES, DUCTS, COLUMNS, ETC. IN FINISHED AREAS SHALL BE FURNISHED AND INSTALLED BY GENERAL CONTRACTOR W/MATERIALS TO MATCH ADJACENT AREAS.

TERMITE TREATMENT: GENERAL CONTRACTOR SHALL BE RESPONSIBLE FOR TERMITE TREATMENT (SEE SPECIFICATIONS).

DOOR / WINDOW NOTES:

ALL VIEW PANELS TO HAVE 1/4" SAFETY GLASS (EXCEPT WHERE NOTED)

ALL SIDE LIGHTS TO HAVE 1/4" SAFETY GLASS (TEMPERED GLASS)

DOORS TO BE STAINED, FINISHED NATURAL OR PAINTED AS SELECTED BY OWNER

PROVIDE WEATHER STRIPPING & SWEEP STRIPS ON ALL EXTERIOR DOORS - SEE SPECS (WEATHER- STRIPPING TO BE IN HARDWARE ALLOWANCE)

ALL EXTERIOR DOORS TO HAVE METAL THRESHOLDS.

PANIC HARDWARE: CONTRACTOR IS TO PROVIDE AND INSTALL PANIC HARDWARE ON EXTERIOR EXIT DOORS. PANIC HARDWARE TO BE PROVIDED BY DOOR MANUFACTURER.

INSTALL DRIP CAP AT ALL DOORS DIRECTLY EXPOSED TO WEATHER

MASTIC AIR VAPOR BARRIER MEMBRANE AT WINDOWS SHALL BE "NERVASTRAL" 20 MIL.

LINTELS: PROVIDE AND INSTALL LINTELS AS REQUIRED AT ALL OPENINGS (WINDOWS, DOORS, ETC.), PAINT ALL EXPOSED LINTELS TO MATCH BRICK UNLESS NOTED DIFFERENTLY.

LINTEL SCHEDULE:

- ∠ 4" x 3 1/2" x 5/16" -------- (0-4' OPENINGS)
- ∠ 5" x 3 1/2" x 5/16" -------- (4'-6' OPENINGS)
- ∠ 6" x 3 1/2" x 5/16" -------- (6'-8' OPENINGS)

CMU WALL: EXPOSED CMU BLOCK WALL TO BE STACKED BOND.

PROVIDE TRUSS-TYPE MASONRY REINFORCING @ 16" O.C., TYPICAL ALL CMU WALLS.

RESTROOM NOTES:

MIRRORS ARE TO BE MOUNTED 36" HIGH FOR THE LENGTH OF THE VANITY, EXCEPT WHERE NOTED DIFFERENTLY. SEE ARCHITECTURAL PLANS FOR LENGTHS OF VANITY TOPS.

PROVIDE BLOCKING BEHIND ALL TOILET ACCESSORIES AND OTHER WALL MOUNTED ITEMS AS REQUIRED AND AS RECOMMENDED BY MANUFACTURER.

DOORS AND PARTITIONS: SOLID PLASTIC 1" PANEL (SOLID HDPE CONSTRUCTION), FLOOR MOUNTED, HEADRAIL BRACED (EXTRUDED ALUM.). 55" HEIGHT STANDARD CONTINUOUS PLASTIC BRACKETS & PLASTIC SHOES. PROVIDE COAT HOOK, LATCHES & PULLS. PROVIDE 8" ALUM. WRAP AROUND HINGES, ALUM. LATCH & ALUM. STRIKE.

BATHROOM ACCESSORIES NOTES:

CONTRACTOR IS TO PROVIDE AND INSTALL PAPER TOWEL DISPENSER EQUAL TO "BRADLEY" MODEL #250-15.

CONTRACTOR IS TO PROVIDE AND INSTALL TOILET TISSUE DISPENSER EQUAL TO "BRADLEY" MODEL #5402 AT WATER CLOSET (SURFACE MOUNTED DUAL ROLLS) AS PER ADA EQUIREMENTS.

CONTRACTOR IS TO PROVIDE AND INSTALL SOAP DISPENSER EQUAL TO "BRADLEY" MODEL #6562 AT LAVATORY PER ADA GUIDELINES.

CONTRACTOR IS TO PROVIDE AND INSTALL WASTE RECEPTACLE EQUAL TO "BRADLEY" MODEL #356.

ADA MIRROR SHALL BE TILTED FORWARD AT ADA ACCESSIBLE LAVATORY, EQUAL TO BRADLEY MODEL #740, STAINLESS STEEL CHANNEL FRAMED MIRRORS.

CONTRACTOR IS TO PROVIDE AND INSTALL MIRROR EQUAL TO BRADLEY MODEL #740, STAINLESS STEEL CHANNEL FRAMED MIRRORS.

ACCESSIBILITY (ADA) NOTES

TOILET AREA FOR HANDICAPPED: SPECIFIED WATER CLOSETS SHALL RECEIVE HANDRAILS AND SHALL MEET ADA STANDARDS.

TOILET GRAB BARS FOR HANDICAPPED: HORIZONTAL POSITION TO BE 33" - 36" ABOVE FINISH FLOOR TO THE TOP OF THE GRAB BAR(ADA 609.4). GRAB BARS SHALL BE ROUNDED AND FREE OF ABRASIVE ELEMENTS. GRAB BARS SHALL NOT ROTATE WITHIN THEIR FITTINGS.

TOILET PAPER DISPENSERS: DISPENSERS ARE TO BE MOUNTED 7" to 9" IN FRONT OF THE WATER CLOSET TO CENTERLINE OF THE DISPENSER AND 15" TO 48" ABOVE THE FINISH FLOOR TO TOP OF DISPENSER (ADA 604.7). DISPENSER SHALL NOT INTERFERE WITH GRAB BAR.

URINALS SHALL HAVE RIM AT 17" MAXIMUM ABOVE FINISH FLOOR (ADA 605.2).

MIRRORS AT LAVATORIES AND COUNTERTOPS SHALL BE MOUNTED WHERE THE BOTTOM OF THE MIRROR IS 40" MAXIMUM ABOVE FINISH FLOOR (ADA 603.3).

SHOWER NOTES:

SHOWER WATERPROOFING: WATERPROOFING SHALL BE EQUAL TO SHERWIN WILLIAMS "TOTAL GUARD BWB" (BULK WATER BARRIER) APPLIED AT MINIMUM 1/8" THICK. FINISH TOPCOAT TO BE EQUAL TO SHERWIN WILLIAMS "MACRO-POXY 646". INSTALL IN ACCORDANCE TO MANUFACTURERS RECOMMENDATIONS. TYPICAL ALL SHOWERS.

ALL SHOWER CEILINGS TO BE MOISTURE RESISTANT

CONTRACTOR IS TO PROVIDE AND INSTALL TOWEL BAR AT 40" to 48" ABOVE FINISH FLOOR.

CONTRACTOR IS TO PROVIDE AND INSTALL COLLAPSIBLE WATER RETAINER (SHOWER DAM FOR SHOWER THRESHOLD) AT HANDICAP SHOWER ENTRANCE, EQUAL TO "ACCESSIBLE DESIGN AND CONSULTING, INC."

SHOWER ACCESSORIES NOTES:

SHOWER CURTAIN ROD: CONTRACTOR IS TO PROVIDE AND INSTALL SHOWER CURTAIN ROD EQUAL TO "BRADLEY" MODEL #9531, SATIN FINISH STAINLESS STEEL 18 GA. AT ALL SHOWERS. VERIFY SIZE.

SHOWER CURTAIN: CONTRACTOR IS TO PROVIDE AND INSTALL SHOWER CURTAIN EQUAL TO "BRADLEY" MODEL #9537 ANTI-BACTERIAL WHITE AT ALL SHOWERS. VERIFY SIZE.

SHOWER CURTAIN HOOKS: CONTRACTOR IS TO PROVIDE AND INSTALL SHOWER CURTAIN HOOKS EQUAL TO "BRADLEY" MODEL #9536 AT ALL SHOWERS.

SHOWER ACCESSORIES NOTES:

SHOWER CURTAIN ROD: CONTRACTOR TO MOUNT ROD ON INSIDE WALL SURFACE OF SHOWER OPENING. CURTAIN ROD TO BE 1-1/4" DIA. STAINLESS STEEL W/SATIN FINISH, EQUAL TO "BOBRICK" B-6047. PROVIDE ROD FLANGES & BRACKETS TO MOUNT TO CONC. BLK.

HANDICAP SHOWER SEAT: EQUAL TO "BOBRICK" B-518 (FOLDING SHOWER SEAT) TO BE 32" LONG, 22" DEEP AND MOUNTED 18" A.F.F.

SHOWER CURTAIN HOOKS: EQUAL TO "BOBRICK" B-204-1

SHOWER CURTAIN: EQUAL TO "BOBRICK" B-204-3

TYP. SHOWER SEAT: EQUAL TO "BOBRICK" B-519 TO BE 18" LONG, 15" DEEP AND MOUNTED 18" A.F.F..

WASTE RECEPTACLE TO BE EQUAL TO "BOBRICK" WASHROOM EQUIPMENT, INC. #0828 @ EACH PAPER TOWEL DISPENSER

STAIR NOTES:

MINIMUM RISER HEIGHT: 7 INCHES
MAXIMUM TREAD DEPTH : 11 INCHES
MINIMUM HEAD ROOM: 6'-8" CLEAR
MINIMUM WIDTH: 44"
MINIMUM WIDTH: 36 INCHES (OCCUPANT LESS THAN 50) (IBC 1009.1)

STAIR HANDRAIL NOTES:

SH01. HANDRAILS SHALL BE INSTALLED ON BOTH SIDES OF STAIRS.

SH02. HANDRAIL HEIGHT SHALL BE UNIFORM ABOVE TREAD NOSING AND FINISHED SURFACE.

SH03. HANDRAILS SHALL BE MOUNTED BETWEEN 34" AND 38" ABOVE TREAD NOSING, LANDING, AND/OR FINISHED SURFACE.

SH04. HANDRAILS SHALL BE 1.25" TO 2" DIAMETER.

SH05. HANDRAILS SHALL EXTEND 12" HORIZONTALLY ABOVE THE TOP RISER AND CONTINUE TO SLOPE FOR THE DEPTH OF ONE TREAD BEYOND THE BOTTOM RISER.

SH06. HANDRAILS SHALL HAVE MINIMUM CLEARANCE OF 1.5" BETWEEN WALL AND HANDRAIL

SH07. HANDRAIL ASSEMBLIES SHALL RESIST A LOAD OF 50 POUNDS PER LINER FOOT AND SINGLE CONCENTRATED MINIMUM LOAD OF 200 POUNDS.

SH08. HANDRAILS SHALL BE WITHIN 30 INCHES OF ANY PORTION OF STAIR.

NOTE: ALL EXTERIOR EAVE TRIMS, INCLUDING FASCIA AND FRIEZE BOARDS, SOFFITS, AND CEILING SYSTEMS (INCLUDES PORCHES AND ENTRY CANOPIES) TO BE EQUAL "ALCOA" PRE-FINISHED ALUMINUM .040. NOTE ALL SOFFITS TO BE VENTILATED IN ACCORDANCE TO MANUFACTURER'S RECOMMENDATIONS.

SO2. PROVIDE BRICK WALL TIES AT 16" O.C. TYPICAL.
SO3. PROVIDE 1 INCH MINIMUM AIR SPACE BETWEEN BRICK AND SHEATHING

SO4. PROVIDE WEEP HOLES @ 48 INCHES O.C.

SO5. PROVIDE CONTINUOUS FLASHING
SO6. SLOPE GRADE AWAY FROM BUILDING

GUARDRAIL NOTES:

GUARDS SHALL BE LOCATED ALONG OPENINGS THAT ARE MORE THAN 30 INCHES ABOVE THE FLOOR OR FINISH GRADE BELOW.

GUARDS SHALL BE 42 INCHES MINIMUM HEIGHT.

GUARDS SHALL NOT ALLOW A 4 INCH DIAMETER SPHERE PASS THROUGH ANY OPENING TO A HEIGHT OF 34 INCHES. FROM 34 INCHES TO 42 INCHES AN 8 INCH SPHERE SHALL NOT PASS.

MILLWORK NOTES:

MILLWORK: ALL MILLWORK (CABINETS, SHELVES ...) INDICATED IN CONSTRUCTION DOCUMENTS, TO BE PROVIDED AND INSTALLED BY GENERAL CONTRACTOR.

1. SEE MILLWORK ELEVATIONS FOR DRAWER AND CABINET CONFIGURATIONS.
2. PROVIDE KV #1300 DRAWER SLIDES FOR ALL DRAWERS.
3. ALL CABINET HARDWARE TO BE - (PULLS EQUAL TO STANLEY #4484 W/ #4487 BASES. HINGES EQUAL TO STANLEY #1592 -1 W/SP46 MAGNETIC CATCHES).
4. CAULK BETWEEN ALL COUNTER TOPS & BACK SPLASHES. CAULK BETWEEN ALL BACK SPLASHES & WALLS
5. CLOSET SHELVING: ALL CLOSET SHELVES SHALL BE CUSTOM WIRE SHELVING SYSTEMS WITH SHELF HANGING ROD EQUAL TO "RYLEX" CLOSET SYSTEMS.

PRE-ENGINEERED METAL BUILDING NOTES

METAL BUILDING GRIDLINES CANNOT USE SAME NUMBERS OR LETTERS AS STRUCTURAL GRIDLINES UNLESS THEY ARE IN THE SAME LOCATION.

METAL BUILDING GRIDLINES MUST USE NUMBERS WHERE STRUCTURAL GRIDLINES USE NUMBERS, UNIQUE NUMBERS IF NOT IN SAME LOCATION OR SHOP DRAWINGS WILL BE REJECTED

METAL BLDG FRAMES DRIFT LIMITATION - H/200

SEISMIC NOTES:

BUILDING CLASSIFICATION CATEGORY IV

OCCUPANCY IMPORTANCE FACTOR - I=1.0

SITE CLASSIFICATION D

GENERAL NOTES:

1. All concrete shall conform to current ACI specifications and shall be as follows: regular sand and gravel with minimum of 3000psi compressive strength in 28 days in footings, curbs, piers, walks, and gradebeams. Concrete for floor slabs shall have a minimum 28 day compressive strength of 3500 psi, maximum slump of 5". All concrete shall incorporate 20% maximum fly ash content.

2. Provide necessary reinforcing steel accessories to hold bars in proper position.

3. Provide corner bars of same size and number as horizontal bars at all corners of gradebeams.

4. All reinforcing shall be deformed, ASTM 615, Grade 60.

5. All detailing and fabrication of reinforcing bars must follow the ACI "Manual of Standard Practice for Detailing Reinforced Concrete Structures."

6. All placing of reinforcing bars in the forms must follow the CRSI "Recommended Practice for Placing Reinforcing Bars."

7. All bars are to be supported in the forms with wire bar supports meeting the requirements of the ACI "Manual of Standard Practice for Detailing Reinforced Concrete Structures".

8. Lap splices as specifically called for, but as least 30 bar diameters (15" min.).

9. Welded wire fabric must have end laps of one full mesh plus 2" and wiring all laps securely together. Welded wire fabric should extend into supporting beams and walls for anchorage.

10. All concrete slabs on grade that are not otherwise provided for shall have reinforcing consisting of 6"x6"-W2.1x W2.1 welded wire fabric.

11. All reinforcing bars shall be securely wired together in the forms. Two-way mats of steel, column ties, and beam stirrups shall be tied sufficiently to hold them securely in place.

12. Provide keys of 2"x4" at construction joints. Control joints in slab on grade shall be sawed 1-1/4" deep within 8 hours of pouring slab. Seal all joints with sealant.

13. All reinforcing shall have concrete cover as specified in ACI-318.

14. Design live loads for roofs and wind are in accordance with the "International Building Code", 2012 Edition.

ULTIMATE WIND SPEED = 143 MPH
RISK CATEGORY IV
EXPOSURE CATEGORY = B

15. The contractor shall be responsible for the design, placement, and maintainance of any and all shoring, bracing, or tie-backs needed to support any part of the construction during the construction process. It is the contractor's responsibility to ensure the safety and integrity of the structure until the necessary permanent elements are in place.

STRUCTURAL NOTES:

1. Unless shown otherwise, the following loose lintel schedule shall be used.

Clear Spacing	Lintel angle for each 4" masonry thickness
0' to 4'-0"	3-1/2"x 3-1/2x 1/4"
4'-1" to 6'-0"	4"x 3-1/2"x 3/8"
6'-1" to 8'-0"	5"x 3-1/2"x 3/8"
8'-1" to 10'-0"	6"x 3-1/2"x 3/8"
over 10'-0"	consult engineer

2. All wide flange beams shall have a minimum yield strength of 50 ksi, and conform to ASTM A-992
3. All structural steel except as noted above shall conform ASTM specification A-36 or ASTM A-500, Grade B, as applicable.
4. No splices in structural steel shall be accepted without approval of the engineer except where shown on the drawings.
5. Bolts for structural steel shall be ASTM A-325 high-strength bolts. Anchor bolts shall be ASTM F1554 unless otherwise noted.
6. All welding rods used shall be grade 70xx.
7. All structural steel shall be manufactured and erected in accordance with the Ninth Edition of the American Institute of Steel Construction Manual.
8. Where possible, all bolt holes shall be shop drilled. Holes made at the job site shall be mechanically drilled. No burning of holes will be allowed.
9. All steel joists and bridging shall conform to the Steel Joist Institute standards of fabrication and erection. Joist bridging shall be as required by SJI. Do not connect bottom chord extensions until roof loads are in place. Concentrated loads on joists shall be placed at joist panel points, or the joist shall be reinforced as per SJI recommendations.

PLUMBING ABBREVIATIONS

ABBREVIATIONS – PLUMBING	
AAV	AIR ADMITTANCE VALVE
AD	ACCESS DOOR
AHU	AIR HANDLING UNIT
AS	AIR SEPARATOR
BTU	BRITISH THERMAL UNIT
CFM	CUBIC FEET PER MINUTE
CTG	CEILING TRANSFER GRILLE
CG	CEILING GRILLE
CO	CLEAN OUT
CU	CONDENSING UNIT
CW	DOMESTIC COLD WATER
DIA	DIAMETER
DN	DOWN
ET	EXPANSION TANK
EWH	ELECTRIC WATER HEATER
EWT	ENTERING WATER TEMPERATURE
°F	DEGREES FAHRENHEIT
FC	FLEXIBLE CONNECTION (DUCT OR PIPE)
FLR	FLOOR
FT	FEET
GF	GAS FURNACE
GPM	GALLONS PER MINUTE
GWH	GAS WATER HEATER
HP	HORSE POWER
HR	HOUR
HW	HOT WATER

ABBREVIATIONS – PLUMBING	
ID	INSIDE DIMENSION
KW	KILOWATT
LBS	POUNDS
MAX	MAXIMUM
MBH	THOUSAND BTU PER HOUR
MFG	MANUFACTURER
MIN	MINIMUM
MUA	MAKE UP AIR UNIT
NC	NORMALLY CLOSED
NIC	NOT IN THIS CONTRACT
NO	NORMALLY OPEN
NTS	NOT TO SCALE
P	PUMP
PRV	PRESSURE REDUCING VALVE
PSI	POUNDS PER SQUARE INCH (GAUGE)
RPM	REVOLUTIONS PER MINUTE
RP	RECIRC PUMP
SQFT	SQUARE FEET
TYP	TYPICAL
VTR	VENT THRU ROOF
W/	WITH
EW	EXISTING DOMESTIC WATER
EDCW	EXISTING DOMESTIC COLD WATER
EDHW	EXISTING DOMESTIC HOT WATER
EDHWR	EXISTING DOMESTIC HOT WATER RECIRC
EG	EXISTING GAS (NATURAL)

P6.1	PLUMBING SCHEDULES
FP1.1	GROUND FLOOR PLAN - FIRE PROTECTION
FP1.2	MEZZANINE FLOOR PLAN - FIRE PROTECTION
FP5.1	FIRE PROTECTION NOTES AND DETAILS

GENERAL NOTES:

1 CONTRACTOR IS RESPONSIBLE FOR COORDINATING ALL PLUMBING AND FIRE PROTECTION INSTALLATIONS WITH OTHER TRADES SUCH AS ELECTRICAL, STRUCTURAL, HVAC, LIGHTING, CEILING CONSTRUCTION AND SUPPORTS, ETC. ANY CONFLICTS ARISING OUT OF A LACK OF CONSTRUCTION COORDINATION OR DUE TO LACK OF CONSIDERATION FOR THE NEEDS OF OTHER TRADES SHALL BE RESOLVED AT NO EXPENSE TO THE OWNER.

2 ALL PIPING SHALL BE INSTALLED IN SUCH A MANNER THAT CONFLICTS WITH AIR CONDITIONING DUCTS AND WITH CEILING LIGHTS WILL NOT OCCUR. IN SOME INSTANCES, WHERE INDICATED, PIPING SHALL BE INSTALLED WITH SLEEVES THROUGH BEAMS. CONTRACTOR SHALL BE RESPONSIBLE FOR FURNISHING THE SIZES OF SLEEVES AND THE ELEVATIONS AT WHICH OPENINGS ARE TO BE MADE PRIOR TO INSTALLATION OF STRUCTURAL MEMBERS.

3 FOR EVERY PIPE SLEEVE PENETRATING FIRE RATED WALLS AND SLABS, USE 3M OR EQUIVALENT FIRE BARRIER WRAP STRIP FS-165, 3M CAULK CP 25 AND 3M PUTTY 303, ASTM E-814, U.L. LISTED, CAPABLE OF RAPID EXPANSION WHEN EXPOSED TO HEAT. COMPLIES WITH BOCA, ICBO AND SSBC. PROVIDES 3 HOUR FIRE RATING.

4 ALL SANITARY AND STORM DRAINAGE PIPING SHALL BE INSTALLED AT 1/8" PER FOOT SLOPE UNLESS OTHERWISE NOTED. FIXTURE ARMS AND SMALL BRANCHES SHALL BE SLOPED IN ACCORDANCE WITH THE STANDARD PLUMBING CODE.

5 PROVIDE ACCESS PANELS FOR SHOCK ABSORBERS, VALVES AND CLEANOUT COVERS FOR CLEANOUT PLUGS AS SPECIFIED. EACH ITEM SHALL BE PROVIDED WITH ITS ACCESS PANEL OR COVER. ACCESS PANELS AND CLEANOUT COVERS SHALL BE EASILY ACCESSIBLE AND CONTRACTOR WILL BE RESPONSIBLE FOR LOCATING THESE ITEMS SO THAT SHOCK ABSORBER, VALVE OR CLEANOUT LIES WITHIN WALL OR CEILING IMMEDIATELY BEHIND COVER OR PANEL. CONTRACTOR SHALL COORDINATE THE LOCATION OF PANELS AND COVERS WITH OTHER TOILET ACCESSORIES AND FIXTURES AS WELL AS ARCHITECTURAL LAYOUT.

6 DURING FINAL PUNCH LIST INSPECTION, CONTRACTOR SHALL HAVE ALL CLEANOUT COVERS AND ACCESS PANELS OPENED AND ITEMS EXPOSED FOR VERIFICATION AS TO THEIR INSTALLATION BY CONTRACTING OFFICER.

7 PROVIDE AUTOMATIC RESEALS FOR ALL FLOOR DRAINS.

8 SPRINKLER HEAD LOCATIONS SHALL BE SYMMETRICAL WITH ROOM, LIGHTS, DIFFUSERS, ETC. AND COORDINATE WITH THE REFLECTIVE CEILING PLANS. HEADS SHALL BE AS FOLLOWS.

A. LAY-IN CEILING SHALL HAVE SEMI-RECESSED HEADS WITH ESCUTCHEON COLOR SELECTED BY THE ARCHITECT.

B. SHEET ROCK OR PLASTER CEILINGS SHALL HAVE FULLY CONCEALED HEADS WITH COLOR OF CAP SELECTED BY THE ARCHITECT.

9 ALL PIPING TO COMPLY WITH 2012 IBC SEISMIC DESIGN CATEGORY C, OCCUPANCY CATEGORY IV.

CITY OF HATTIESBURG MISSISSIPPI
